nity of labor," therefore and necessarily, nothing in labor that is "worthy or honorable." The idea in the editor's eye which obscures the dignity of labor is "dropping sweat," "posture," and "physical exertion, flagging strength and a tired frame." Manifestly the editor of the *Industrial World and Iron Worker* believes there is dignity in idleness, in leisure, in laziness, sprawling in the shade, in hugging the bed. The editor of the *Industrial World and Iron Worker* would never point to the ant, to the bee, nor to the beaver, as examples of work and thrift. As between the army of dudes and the dinner bucket brigade, the dudes would have all the dignity and the toilers with "tasked muscles and smirched faces" all the degradation. The editor in getting down to business, down to his task, pen in hand and with beaded sweat on his massive forehead, declares "Hardship is the most conspicuous attribute of labor;" that "it is the outcome of the primal curse, "In the sweat of thy face shalt thou eat bread." He says this, when it is declared that God Himself worked six days to build His universe, and rested from His labor on the seventh day. He says this in the face of the fact that Jesus, the Son of God, worked at the carpenter's trade, and in face of the declaration of the Messiah, that "Hitherto my Father worketh and I work." But the editor of the *Industrial World and Iron Worker* grows spiritual as he proceeds. His soul gets full of sublimating, etherializing gush, and he exclaims of labor: "It is degradation from a higher and nobler sphere of existence." Here we have it that labor is degrading, debasing, contaminating, and the lower one gets in the arbitrary classification of work, the more degrading it becomes, and with the help of a dictionary the editor of the *Industrial World and Iron Worker* classifies as follows: "Labor is hard work; toil is grievous labor; drudgery is debasing toil." In this we have the *caste*, the germ of aristocracy, even in labor. The common laborer is the drudge, the debased, the degraded workingman, the hewer of wood and drawer of water; the outcast, the vagabond, the man cast down "from a higher and nobler sphere of existence;" a man without "true worth," neither "worthy nor honorable;" without "elevation of mind

or character," without "nobility of sentiment or action;" such are necessarily the views of the editor of a paper called the *Industrial World and Iron Worker*. It should be called the "Aristocratic World and Iron King."

The editor of the *Industrial World and Iron Worker* represents a class of men whose education, if in any proper sense they can be said to be educated, makes asses of them in a superlative degree. In the broad field of labor the workers, by an irrevocable law, are one, and strange as it may appear, those whom the editor of the *Industrial World and Iron Worker* would assign the lowest place are of the first importance. He says:

The engineer who operates the machinery of some steamship by opening or shutting a few valves with a very small outlay of corporeal strength, occupies a higher position in the scale of labor than the fireman who sweats and toils before the furnace doors, with an incessant drain upon his physical resources; while the captain—the executive of the vessel—who examines charts, determines latitude and longitude along his course, issues orders and bears the great burden of responsibility, holds a position and exercises functions higher still. Like gradations of the skill, dexterity and judgment with which labor is applied, exist in all occupations.

The engineer is of no more importance to the steamship than the fireman, since there would be no opening and shutting of valves were it not for the fireman; but for the man who makes the fire that makes the steam, the steamship would never move from her moorings. But behind the captain, the engineer and the fireman, away somewhere under ground, a man with "tired muscles and smirched face" is delving for the fuel. And thus it happens, nor can it ever be otherwise; it is the law as irrevocable as the law of gravitation, that a condition of interdependence exists, and when the world is called upon to admire the splendid triumphs of skill, the award, whether it be gratitude or glory, belongs to all the workmen alike, and to deny this would find its vicious parallel, should the eye say to the ear, or the hand to the foot, "I have no need of thee."

The dignity of labor may be and ought to be determined by results which labor produces, and since labor produces all things the task for those who chose to glean for facts will not be over arduous. The monuments of labor are on every hand. Had we the space at our command it would afford us no little satisfaction to dignify labor by some-

thing more than mere mention. What the editor of the *Industrial World and Iron Worker* calls the "primal curse" is such only in the minds of cranks and visionaries, who think work degrading. In work man becomes a co-laborer with God Himself. He gives the sunshine and the rain, and the farmer sows the seed and the world joins in the harvest home songs.

The editor of the *Industrial World and Iron Worker* closes his article as follows:

Every step in the progress of the sciences and the arts which helps to transform drudgery into toil, toil into labor, labor into work, and work into healthful exercise, is a movement in the same direction—is an advance toward what the Bible calls "the times of the restitution of all things"—is a nearer reach toward the Adamic blessedness in the Garden of Eden.

Just what the editor of the *Industrial World and Iron Worker* means by "Adamic blessedness in the Garden of Eden," can only be assumed. It is stated that God Himself came down and "planted the garden eastward in Eden," engaged in horticulture, and placed Adam in the garden to "tend it," to engage in labor, toil, drudgery, for such is the fate of all practical horticulturists. They are required to dig, remove weeds, hoe, etc., and it is not probable that Adam was exempt from such duties. This was the "Adamic blessedness" to work in a garden. The editor of the *Industrial World and Iron Worker* has visions, and dreams dreams. He sees the good time coming when costumes will be fig leaves and all will be Eden gardeners. He does not apprehend another serpent to beguile the Eves, nor another eviction on account of forbidden fruit. He is doomed to disappointment, but he will see if he lives long enough, old moss-grown, despotic ideas of an aristocracy in labor knocked higher than Gilroy's kite, and possibly a time when papers bearing the title of *Industrial Worlds* and *Iron Workers* will cease being the organs of aristocrats, and will learn that honest toil is not debasing.

THERE have been rumors afloat for some time past that British capitalists had entered the American market for the purpose of getting possession of the great packing establishments of the country. The American hog seems to be growing in popularity in England.

A GIGANTIC SCHEME.

Railroad managers do not make public their schemes in advance, but occasionally the best laid plans of mice and men do get to the public ear in spite of eternal vigilance. Some time ago the following letter was published in Chicago:

NEW YORK, July 8.

DEAR SIR—As the Inter-State Commerce bill has abolished the pooling arrangements heretofore existing between trunk and other pool lines, the necessity for some system regulating and controlling their traffic appears to be as great, if not greater, than ever before, and some new plan must at an early date be devised therefor. Such a plan, to be effective, should cover the following points:

1. Maintain all the equities, not only as between the railroad companies themselves, but also, between their respective stockholder's interest.

2. Continue the legal and all other relations of the respective railway companies to the United States, and to the several States under which they are organized as at present.

3. Secure unity of interest upon an absolutely equitable basis in the ownership, regulation and earnings of all the lines.

This being accomplished, the weaker points of the pooling arrangements and the temptation to companies to cut under or destroy the same will have been removed, and the power of large shippers to play off one line as against the other will be reduced to the minimum, if not destroyed.

The above and many other desirable points, which will readily occur to you, can, in my judgment, be readily secured only by placing at least a majority of the shares of each of the competing trunk lines, the coal lines, the Southwestern and Northwestern lines and the transcontinental lines, and their respective affiliated companies, arranged by territorial groups, in trusts, similar in many respects to the Standard Oil and other successful trusts.

For some time past I have given much thought to the creation and conduct of such an organization, and I am satisfied that trusts, constituted as above outlined, would enable the business of the respective territorial groups to be regulated and controlled in the best interest of the proprietor, and without arousing any greater restrictive intervention on the part of the State or national government than now exists. If such a trust should be organized for the control of the business of any group of lines, it would naturally result in the establishment of similar trusts, controlling the other territorial groups. These could finally be worked separately or in one trust, as experience and policy might dictate.

The proposition covers so much ground that at the start you will naturally be disposed to throw it aside, but the details can be arranged in profile so you can examine them thoroughly, and this matter will have to be managed in this manner before long. I desire that your mind should be working upon the lines above suggested.

JOHN J. MCCOOK.

The foregoing letter was the starter, but it was no sooner made public than Mr. McCook said that the letter had been written without conference or consultation with railroad or other officials; that not a man nor a road had been committed to it. In this connection it is stated that a number of railway managers have been invited to New York for consultation, and that Jay

Gould favors the scheme of forming the gigantic combination. That something is in the wind is believed by those who are in a position to understand indications, and conclusions are strengthened by a special dispatch from Hartford, Conn., which says:

The text for a bill which is to be introduced at the opening session of Congress in November, involving the most gigantic scheme for railroad consolidation ever candidly discussed in this country, is now being put into type in this city, and a Chicago firm is engaged in publishing the maps illustrating the consolidation of railway lines and the tracts of country which are to supply the proposed system with business. The fundamental idea is to make Boston the metropolis of the continent. While the Inter-State Commission and the business men of New England are discussing the problems to be solved on account of the low freight rates on the Canadian Pacific road, the consolidation schemers are consummating plans for the absorption of the Canadian rival with the American system and the establishment of the greatest railroad power in the world. The Villard system is the only one not embraced in the conception. The Union and Northern Pacific roads and the Canadian Pacific are then to be consolidated. The system, extending from Santa Fe through the Southwestern States, thence by way of the Pennsylvania coal regions and across the Hudson river at Poughkeepsie, taking in the Hartford and Connecticut Western line, with the new road from Tariffville to Springfield, is also involved in the unparalleled scheme for consolidation.

From Boston the originators of the plan propose to run a steamship line to Europe, furnishing the amplest accommodations for freight and passenger traffic from the Pacific slope to the largest ports on the European continent. The details of the bill cannot be ascertained at present, but its projectors state that members of the Senate are familiar with the scheme, and are enthusiastic for its prosecution. The capitalization to be asked for will not be less than \$700,000,000.

In the main, the consolidation will secure the through lines by purchase or lease. English capitalists will join hands in the enterprise, effecting a commercial union at present and ultimately a political one with the Canadian territory. American capitalists will be interested equally with English in developing the continent. The consolidation also contemplates the ownership of a new ocean cable joining Boston with the German Empire.

"Utopian as the plans may seem at first, they have been skillfully formulated, and will have to be discussed by an intelligent public within the next four months. The sum of \$75,000 has been expended in procuring surveys for the maps, which Rand, McNally & Co. are publishing for the originators of the consolidation. Several of the surveys were begun in 1881, and the plans which are now about to be disclosed have been under consideration since then."

When Mr. McNally was questioned to-day concerning the above dispatch, he said: "I know nothing of it except what I have seen in the newspapers. We have no contract to furnish such combination maps, and have never been asked for our estimates for furnishing them, or been communicated with in any way in the matter."

The foregoing may be pure fiction, but in this age of combinations and trusts possibilities become probabilities, and if all interests can be harmonized and capital secure a firmer foothold and larger profits, the combination will be perfected sooner or later.

But Boston will not become the "metropolis of the continent." And it may transpire that in competition for metropolitan honors the combination will not be permitted to materialize, since New York will see to it that Boston does not secure continental importance.

"WORKINGMEN IN POLITICS."

An article in a recent number of the *Last-er*, under the above caption, is eminently timely and should have wide reading. It is as follows:

Workingmen should keep in politics more, not to make a living out of it, but to make a living by it. The men who labor for a living form the great mass of American voters, and if they are to become negligent in their political duties, the field is left open to political demagogues, office-seekers and monopolists. Americans are apt to be deceived by the idea that they exercise a great power as voters, but the truth is the English workingmen have their wishes more respected and wield a greater influence in Parliament than do the voters of this country in our National House of Congress. Very seldom can it be said to happen there that a politician wheedles votes from the workingmen, and then deliberately violates the pledges made to them by voting against their interests at the very next session, and depend upon sugary excuses to their constituents to get re-elected. If he does it but once he is branded and dumped into eternal political obscurity. Workingmen on this side of the water should do the same and push themselves more into politics as workmen. If one of our number should rise to political prominence, like Joseph Cowan, the English Radical, he would be an immense power in industrial legislation and a stone wall to monopolistic lobbying. Workingmen should, as we observed in the beginning, make a living not out of, but by politics; that is, they ought to endeavor, by their political actions, to bring about legislation which will, if it does not aid them directly in the socialistic sense of earning a living, at least prevent the grinding or over-reaching political tactics of corporations, trusts, etc. The members of these rich bodies are few in number compared with the mass of workingmen, and yet the former are ever dicker in politics, tampering with legislatures and laws so as to find some loop hole for their schemes. We can not, if we would, do the bribing done by these unscrupulous magnates. We have not the money, but we have a voice and a ballot. Let the workman's ballot be pitted against the magnate's dollar! Ballot against boodle, and the ballot wins every time.

What the workingmen of the United States want is righteous laws; they want upright men to administer them when enacted; they want good government, and by the right use of the ballot they can put a stop to multiplied wrongs, the result of vicious laws enacted in the past, many of which still disgrace the statute books of the country.

This *Magazine*, from time to time, has called attention to this subject, and we are glad to know that politics, as the term

should be understood, is doing some excellent work for working men—and that it is looked upon as a means for the accomplishment of still greater things for their welfare. There must be laws everywhere suppressing Pinkerton thugs, the black listing infamy, and laws that shall sharply define the boundaries of courts when a workingman's interests come in conflict with corporate greed. There must be laws to restrain men from cornering the food products of the country, thereby reducing the purchasing power of the workingman's hard-earned dollar. There must be laws to squeeze the water out of stocks and bonds which compel labor to pay tribute to felonious greed. And politics, not partisan politics, but politics, the science of government, will do those righteous things and give labor a fair show in the struggle for life, liberty and the pursuit of happiness.

The machine and the miner, brings the question of work and wages into haggard prominence. Miners, in certain coal districts, are requested to compete with the machine. Wages are down to the starvation point, and when miners decline to accept still lower wages, they are told to submit or the machine will take their places. The machine, doesn't require food or clothing, a shed answers for a shelter, better, the mine is its home. The machine does not marry, rears no children, has no use for church or school—but, it can dig coal, it can displace the miner and transform him into a tramp; it can beggar wives and children, and transform homes into dens—and it can make mine owners rich—make them millionaires—moneyed aristocrats. Thousands of these machines are being manufactured, and coal districts are Russianized. Capital is the Czar in such cases, and the miners are the serfs. The United States is exporting food products monthly to the amount of millions, and miners, with their wives and children wail piteously for bread to keep them from starving. The picture is not overdrawn.

VITAL statistics now include the births and deaths of newspapers, and it is found that during A. D. 1888 the births exceeded the deaths by 767. Sex is not given.

A WEALTHY MAN VS. WORKING-MEN.

The *New York World*, of recent date, extensively sketches wealthy men, and among others, referred to Austin Corbin as follows:

"Austin Corbin has forged rapidly ahead into the ranks of millionaires. He is the most tremendous worker from Maine to California. He swings the presidency of the Philadelphia & Reading; the Ohio, Indiana & Western; the Chicago & Ohio River; the Elmira, Cortlandt & Northern; the Long Island and the Marine railroad companies, of the Corbin Banking Company, and controls the Long Island Improvement Company, the West Jamaica Land Company and the Shinnecock Inn and Cottage Company. His hand in the development of Long Island is known to every one. It turned 'two streaks of rust and a right of way, to a dividend-paying railroad within less than two years, built the Manhattan Beach, Oriental, Long Beach, Point Lookout and Argyle hotels, and all this is simply a development of the line of activity in which he laid the foundation of his fortune. When there is so much talk about certain phases of Western farm mortgages investments nowadays it is interesting to know that Mr. Corbin got his start in life from loans upon mortgages in the West. But it was on actual land and first-class, unincumbered security which was always there."

This Austin Corbin, has not only secured wealth in money, but has won a wealth of infamy which distinguishes him above any millionaire in the country. His villainous policy and methods have given him national notoriety. He is so vilely venal, so destitute of probity that it became necessary for Congress to send a committee to the anthracite regions of Pennsylvania, where he flourishes like the fabled Upas, and investigate the crushing curses he has inflicted upon all who have come within the grasp of his influence. And when Congress again assembles, a bill will be introduced designed to make this man and his confederates, submit to laws designed to uproot certain forms of rascality they have introduced and practiced in Pennsylvania.

This millionaire, Corbin, during the investigation by the Congressional Committee was shown to have set in operation schemes calculated to bring about a strike in the mines of his company, the Reading, operated and the railroads the company controlled, the purpose being a double robbery—first to advance the price of coal, and second, to reduce the wages of railroad employes; and he and his pals, had still another purpose in view, which was to break up labor organizations. To some extent, Corbin accomplished his purpose. He broke

up lodges of firemen and divisions of engineers, and now, has his employes in his grasp, and lords it over them very much after the style practiced in old plantation days, before the colored man was free. Corbin has not yet introduced the lash, he does not string up his firemen and engineers and flog them on the bare backs; nor does he offer them for sale in a slave-pen, but he does say to them, "leave your organizations, obey my orders, or you shall have no work," and his men, or rather his machines, resembling men, obey his orders just as negroes obeyed their masters prior to Lincoln's emancipation proclamation. They do crawl in the dirt on their bellies, and lick Corbin's boots. The question arises, can this Russianizing proceeding extend throughout the country? Will workingmen, everywhere throw up the sponge and wear Corbin collars? We think not.

AN exchange remarks that there are few if any stations in this country where so many passenger trains arrive and depart as at the Union Station, Indianapolis. At the Grand Central Station, New York, but 116 trains arrive and depart in the twenty-four hours; at the Pennsylvania Station, Jersey City, 98 trains; the Boston and Albany leads in Boston, and but 78 trains arrive and depart there daily, counting in all the suburban trains; at the Union Station, St. Louis, 86 trains arrive and depart daily; at Kansas City, 82 trains, while at Indianapolis Union Station 134 trains arrive and depart in the twenty-four hours, and none of these are suburban trains, the management of Indianapolis roads not having as yet worked up to the point that they feel justified in running "short" trains.

A LAW has been enacted by the Legislature of New York compelling all roads operating in that State to equip their freight cars with automatic couplers. Until November 1, 1892, is given the roads to comply with the provisions of the law. The penalty for non-compliance is \$500 for each offense. We congratulate switchmen and brakemen in the new departure. It means longer life to them.

NATIONALISM.

Boston, the Athens of America, and the Hub of the Universe, has gone all to pieces over what is called "Nationalism." It is interesting to read the Yankee Doodleisms of the Boston savants on the new fangled theory. Fortunately, for the baked bean enthusiasts, it is claimed that many distinguished literary men are taking stock in the discovery: such men for instance as Edward Everett Hale, Lawrence Gronund, Col. T. W. Higginson, Ewd. Bellamy, and others of note in the literary world. It is interesting to know that the plan of the Nationalists is to nationalize all industries and solve industrial problems. They say that "the increasing labor strikes and lockouts, the clamor for higher wages and shorter hours, the mighty organizations of laborers for mutual protection, the hue and cry raised against monopolies and trusts, the abuses of capital and the legislation seeking to destroy them, the misery and wretchedness of the poor and the increasing numbers of the unemployed all go to prove to the Nationalists that the times are ripe for a change in the industrial world. It is only a question of time, they say, when, unless anticipated by wise measures, this change must come and with a suddenness which may engulf the nation into a bloody revolution." The Nationalists propose to down brakes in time to avoid such a calamity, and they should be praised for their good intentions. The Nationalists propose to make the people "their own rulers, producers and employers, to abolish money, interest, wages, rent and taxes, and confiscate, by popular vote and peaceful means, all the lands, public works, railroads, telegraphs, telephones, electric and gas lights, and all other branches of industry now conducted by private enterprise, and operate them all for the people and by the people. They would form a gigantic industrial army from service in which no able-bodied man or woman should be exempt. Every worker should have free play in the choosing of that particular line of work he may wish to engage in, with the sanction of the government, of course. If a man wanted to be a farmer, and if the state demanded his services on the railroad as being more valuable to the welfare of his

fellow-men, he could not appeal; or if a man thought himself fitted to be a musician, and the state decided he could do better work as a clerk in a dry goods store, the state would have its way. Likewise if a woman chose to be a seamstress, and the state decided that she was competent to be a professional nurse, she would have to acquiesce. Physicians, statesmen, engineers, editors, artists, authors, historians, all should be chosen upon the same general plan, and as this would result in the choosing of only the very best men for those particular vocations, the public would never, or at least rarely, be imposed upon as it is now."

The schemes of the Boston Nationalists, may not be vagaries of the most pronounced type, but if they are not, it will puzzle the most astute Philadelphia lawyer to tell what they are. If the only chance to protect the country from dire calamities is found in the hallucinations of the Nationalists, then Gabriel might as well blow his horn now as to postpone the interesting ceremony to a later date.

COURTS occasionally get the hang of justice and do the handsome thing, as for instance the following: A Philadelphia newsboy was pushed off a horse-car by the conductor. He was injured so badly that one of his legs had to be amputated. The company was sued for damages, the boy securing a verdict for \$18,000. The company appealed, and at a second trial, just ended, the boy was awarded \$20,000. A motion for another trial was overruled. That looks as though the millennial era might be expected, as the almanac says "about these days."

DURING the month of June fifty-nine persons attempted to commit suicide in the city of Berlin, and forty-eight among them were successful. One boy, twenty women and thirty-eight men made up the number. Twenty-two sought death in the water, fourteen by hanging, twelve through bullets, five by poisoning and two by jumping from windows. This was the largest number ever recorded for the same length of time in the German capital. The fact is that suicide is rapidly increasing in all christian countries.

THE READING.

The Congressional Committee that investigated the Reading Railroad, put the fact upon record that it is a swindling concern—a corporation which for years has been engaged in robbing its stockholders and the public, until in describing its schemes of rascality exaggeration sits dumb in the presence of the facts. It now appears that this Reading “Devil-fish,” this combination of venality and villainy, with Corbin the prince of pirates at its head, has devised a scheme to rob its employes under the guise of benevolence. In the first place it took its American(?) employes and reduced them to the level of Huns, Italians and Poles, robbed them of their manhood as footpads rob their victims of valuables, reduced them to serfs, until few, if any of them, dare assert their freedom, or any prerogative of citizenship. Having done this, the Reading demands of its employes that they subscribe to its “relief fund”—an insurance scheme, in the management of which, the poor debased employes have as much to say as they do in determining the circuit of the stars. They simply pay—and even in this they are as dumb as oysters or the ties in a road bed. In this way the Reading “Devil-fish” extracts from its employes at present \$30,000 a month, and is reaching for a fund of \$1,000,000. When pay day comes, Corbin puts his hands into his employes pockets, so to speak, and takes out \$30,000 and transfers it to his own pockets. The employe is not consulted, any more than a sheep is consulted, when the shearer takes its wool or the butcher transforms it into mutton. Well was it said, by the Congressional Committee, that the Reading has “Russianized the Anthracite coal regions of Pennsylvania.” We are advised that there is not one of the thousands of Corbin’s serfs who favors the monthly insurance steal. The poor devils know they are robbed—they know that the scheme is pure villainy, that it is robbery pure and simple, but they are flat upon their bellies in the dust. They surrendered their manhood, accepted Corbin’s collar and are Corbin’s dogs, and they can’t help themselves. They are as much in Corbin’s power and the power of his

overseers and task masters, as were the negroes in old slave times. Their courage, their manliness, their self-respect has been taken out of them, and on the face of God’s foot-stool there cannot be found a more degenerate, debased and degraded set of men, white, black, yellow or red, than are the employes of the Reading. They have to sit silent while the robbery proceeds. They dare not protest. They are white slaves, and every day adds to their degradation. They abandoned their organizations, accepted degradation, and are now a part of the live stock of the Reading. As for insurance and relief, as well might the lamb in the jaws of a hungry wolf plead for mercy as for a Reading employe to expect justice and fair dealing from the Reading Devil-fish.

THE London & Northwestern Railway Company has a capital of \$528,000,000, annual revenue, \$51,500,000; annual expenditures, \$26,500,000. The number of persons employed by the company is 60,000; in locomotive department, 16,000; miles operated, 2,500; stations, 800; signal levers in use, 30,000; lamps lighted every night, 13,500; cabins, 1,400. The number of passengers carried annually is 57,000,000; weight of tickets issued fifty tons; number of tons of goods and minerals carried, 36,000,000 annually; engine mileage per year, 55,525,334. England is not a large country in square miles, but when it comes to business she expands to continental proportions.

THE mosquito game is having a big run in certain localities in Arkansas. Men put up money to determine their powers of endurance. The game is to strip and enter a swamp where mosquitoes are numerous, and the one who remains the greatest number of minutes takes the cash. The last game recorded, the winner remained in the swamp thirty minutes. Ten minutes were enough for the other sportsman, and both were about dead when they escaped.

COMMISSIONER FINK, of the Trunk Line Association, goes to Europe for a year to study pool and regain his health, which he has lost on a salary of \$25,000 a year.

Mechanical

Letters and Papers pertaining to Locomotive running, firing and management and other topics of interest to locomotive engineers and firemen are solicited for this department.

Correspondents are required in all cases to give their real names, not for publication necessarily, but as a guarantee of good faith.

Communications should be plainly written on one side of the paper only, and as brief as possible. No matter should be introduced for illustration or otherwise that does not have a bearing, directly or remotely upon topics of a mechanical character.

Contributions to this department should reach the Editor not later than the eighth day of each month to insure publication in the next ensuing number, and should be addressed to

MECHANICAL DEPARTMENT,
Locomotive Firemen's Magazine,
TERRE HAUTE IND.

SEPTEMBER, 1889.

The Mechanical Department.

What It has done for Locomotive Firemen.

MR. EDITOR:—If there was, or is to-day, a doubt as to the value of this "Mechanical Department" to locomotive firemen, I will ask them to read with care the remarks of Mr. E. J. Rauch, July, 1889, *Magazine*, page 619.

This is to ask that you give this article first place in this *Mechanical Department*, and the following quotations from Mr. Rauch in italics or caps, to emphasize the facts therein stated, and encourage locomotive firemen to acquire more knowledge and therefore a higher standard in their chosen calling:

"And to the novice I say, make up your minds to learn your business thoroughly."

"I will say right here, that three years ago I was astonished at the ignorance of the firemen who came before me for promotion; scarce one in three had any conception of the machine they had been working on for periods of five or six years. The deplorable ignorance was not due in the majority of cases to any lack of intelligence, but to complete apathy and indifference to learn. Some of those same men aroused themselves and applied to study, came up again for the test and stood the fire; and there is not one of them that I am ashamed to admit that I said he was qualified to be a locomotive engineer and take his place amongst that body of men who hauled 2,456,000 passengers in three days without an accident, or even a complaint against them."

"What a change have I found in the past three years! The last firemen who came for a hacking some few months ago, had not the least

trouble, and if my memory serves me right, not one in six failed to make the rifle."

A reference to January, 1886, *Magazine*, page 36, "A few problems" will be found the inquiries which led to the establishment of the "Mechanical Department" in March *Magazine* of the same year. This testimony of Mr. Rauch to the work done and good accomplished in *three years*, is most gratifying to me, as no doubt it is to all who have had a hand in this. (Great praise is due to our high officials for their hearty and vigorous seconding of all efforts in this direction. And if ninety or ninety-five per cent. of all locomotive engineers are recruited from the ranks of locomotive firemen will their efficiency be increased, and prove the fact that "knowledge is power."

Eccentric.

Areas of Cylinders or Squaring the Circle.

"Can She Pull!"

MR. EDITOR:—Heretofore, in the consideration of mechanical questions, I have strongly urged upon firemen and engineers a reference to "*Knight's Dictionary of Mechanics*." In connection with the subject matter of the title to this article, a reference to "*Hoswell's Mechanics' and Engineers' Pocket Book*" will be found very useful. Pages 231 and 236 "Areas of Circles." It is a book of 936 pages, published by Harper Brothers, N. Y., 1888, fifty-second edition, and on the title page is this true and apt quotation on which all should ponder and reflect: "AN EXAMINATION OF FACTS IS THE FOUNDATION OF SCIENCE."

Before I answer "Eccentric's" inquiry as the *pulling power* of the Shaw locomotive, as contra-distinguished from *speed*, I deem it best to establish certain "*facts*" on which to base comparison; for this purpose I submitted to the expert corps, both theoretical, technical and practical, of one of our largest railways the question of "area of surface of the Shaw two ten and one-half (10½) inch cylinders, to which they reply as follows, under signature of their Master Mechanic:

JULY 11, 1889.

DEAR SIR:—Relative to your inquiry concerning the diameter of a cylinder equal in area to two 10½ in. cylinders, viz:

Area of one 10½ in. cylinder=86.59 sq. inches.

Area of two 10½ in. cylinder=173.18 inches.

Now we must find the diameter of a cylinder that has an area equal to 173.18 square inches, this equal to $\frac{173.18}{.7854} \times \text{diameter} = \frac{2205}{.7854}$ diam. =14.849 in. or 14½. As the areas of circles are to each other, as the squares of their diameters, if we have two cylinders, one 10½ inches in diameter, and the other 21 inches

in diameter, the ratio of their diameters would be $\frac{21}{10} = \frac{2}{1}$, and their areas would be in the ratio $\times \frac{2}{1} = \frac{4}{1}$, in other words, the 21 inch cylinder has four times the area of a 10½ inch cylinder.

This agrees in hundredths with my former statement which was in ten thousandths of an inch, i. e. 14.8492, i. e. if she had 0008, of an inch more surface, she would have each two 14.85 area for cylinders.

The same class of men in another large railway have made calculations which agree with the above, and have gone further and made calculations which I give here, which calculations, establish the true data for comparison.

The comparison is made between the Shaw locomotive, now in service on the Philadelphia division of the Baltimore & Ohio railway, with a recent mileage of 5,535 miles, and one of their class "600," and in precisely the same class of service. The Shaw say two ten and one-half (10½) inch cylinders, on each side twenty-four inch (24) stroke, weight on drivers 48,000 lbs. steam pressure 120 lbs. the "600's" are one seventeen (17) inch cylinder on each size, usual metal counter-balance, twenty-four (24) inch stroke, weight on drivers 53,000 lbs., steam pressure 145 lbs., in all other respects they are very similar.

The foregoing gives the areas of cylinders, say one 10½ 86.5903 multiplied by four (4) gives the total area of the Shaw as 346.3612 multiplied by 120 lbs steam pressure gives a total efficiency of pressure as 41,563.344 lbs.

Baltimore & Ohio's "600" area of surface, one 18 inch cylinder, 226.3612 multiplied by two gives 453.3612 area, multiplied by 145 lbs. steam pressure gives total efficiency, 65,824.374 lbs.

	Sq. Inches.	Stm Pres.
For B. & O's. "600" area of surface	453.3612	65,824.374 lbs.
For Shaw locomotive area of surface	346.3612	41,563.344 lbs.
	107.0006	24,216.080 lbs.

This restated, is, that a properly steam counter-balanced locomotive with 107.0006 square inches less piston area, and 24,216,030 lbs. less steam pressure on area of piston, is doing the same work as one that is much larger, on one of the first-class trunk lines of the country, the Baltimore & Ohio railway. This will, I trust, answer a part of "Eccentric's" inquiry, "Can she pull?"

These points settled it is my purpose to answer "Eccentric's" inquiry, "Can she pull?" by giving statements of her work as it has been stated to me, and others of my own knowledge.

William E. Lockwood.

LOCH ARIE, July 29, 1889.

NEW YORK, July 25, 1889.

MR. EDITOR:—I notice in the advance sheets for August a reprint of an article written by "A Fireman," in the *Locomotive Engineer*, criticising what I said in the *Magazine* about the Swinerton locomotive driving wheel.

"Fireman" shows that he is interested in the Swinerton locomotive driving wheel, but against it, and that, too, without understanding the subject. I had, nor have, no interest in the device whatever. I was sent by our G. M. to look at it, and availed myself of all the opportunities I had in an afternoon and next morning till noon to get the opinion of engineers, together with that of the General Road Foreman, (Mr. Filbert, I think his name is) on the working of the device, not only on the "Onward," but also on other engines to which it had been applied, and from what I gathered from them, and my own observations, I formulated my opinion.

"Fireman" says the weight on the drivers on the "Onward" at one time was 41,000@47,000 pounds, and that she ran hot; that he believed the weight had been reduced, but does not know, or at least does not say, how much. How does he know that my statement of 24,000@27,000 pounds on the drivers is not correct? His expressed opinion of his confidence in his own veracity is, to say the least, a frank one, and I am willing to leave it there.

All the critics in the country may attack the Swinerton device without causing me a thought, and "Fireman" may fire away at the device until his back aches for all I care, and he may do the same by me if he will good-naturedly bear with the return.

All devices live or die on their merits or demerits, regardless of what may be said or written for or against them. It is a duty of journalists to inform themselves on any question of public good and faithfully give out the result of their labors, "nothing extenuate nor ought set down in malice."

I wrote a reply to "Fireman" for the *Locomotive Engineer* because his article appeared in that paper. As many of your readers do not see the *Engineer*, and you have given "Fireman's" article a place, it would only be fair to let your readers have my reply.

Yours truly,

E. J. Rauch.

NEW YORK, July 16, 1889.

MR. EDITOR:—Will some one tell me through the columns of the *Magazine* where the decimal fraction seventy-eight fifty-four ten thousandths ($\frac{78}{10000}$) originated from, and greatly oblige

Yours truly,

Wm. H. Peary,
207 West 60th Street.

Review of August Number.

The advance sheets for the August *Magazine* are at hand, somewhat late, but still better than never, and a hasty review shows we have lots of good things in it, as usual.

While not in the Mechanical Department the portrait of John A. Hill is one of the good things, and is worthy of mention in this Department on account of the service which he is rendering to mechanically inclined locomotive men by publishing so good a paper as the *Locomotive Engineer*, whose pages are ever replete with interest to every one connected with locomotives in any shape. As this department has often been enriched by cullings from Mr. Hill's paper, and as he is, besides this, one of those whole-souled men who are ever ready to champion the cause of right and justice, it is a pleasure to see his profile looking up at you from the pages of the *Magazine* of this Order, whose firm friend he is.

Wm. Gore commenced his service on the railroad in 1846 (when I was only four years old) and is thus entitled to all honor as a pioneer in the service, and his words, coming as they do from age and experience, deserve (and no doubt receive) consideration. In regard to the vacuum in a cooled boiler retaining the water and leaving but a very weak flow of water from the plug, which is therefor replaced without difficulty, we fully agree, for even with a boiler just filled with water through a plug hole I have had no difficulty in putting the plug after the hose was withdrawn, if I closed all inlets for the air and permitted a part of the water to run out so as to create a partial vacuum.

Mr. Gore suggests the possibility of making the means of getting off of a locomotive in close quarters easier, and calls attention to the fact that while accidents do occur in Britain, it is a rare thing for engineers to be seriously injured, and gives the easier steps and foot-board and hand-rail on the side of the tender as means of escape. That some means of decreasing the hazards might be devised at the expense of a few dollars, is true, but I suppose it is more often a question where to jump than where to jump from in this country, where railroads run in the most rugged and wild sections of the country, often with rocks on one side and precipices on the other, and thus gives but a poor chance for immediate selection.

"LeC." has a correct and clear answer to "L. H. Evans'" query in regard to working steam expansively, and shows that while cutting off at half stroke the steam would have to do the work done during the other part of stroke by its expansive

force, and so reduce the pressure at the time of exhaust to one-half the initial. By the same train of reasoning, if we can do the work with an earlier cut-off, say at one-third or one-fourth of the stroke, at eight or six inches in a twenty-four inch stroke, we shall make the steam work expansively for two-thirds or three-fourths of its stroke, and exhaust it at one-third or one-fourth of its initial pressure. This would be thirty-three or twenty-five pounds out of say, 100 pounds, taken as the initial pressure. The advantage of working on the shorter cut-off should be apparent to all from these figures, for in the first instance the steam is liberated when it has only yielded up 50 pounds of its energy to the work, while in the other cases it is retained until it has given up 66 or 75 pounds. Of course there are some men who like to hear them "bark," and to whom a soft exhaust has no music, but if we were obliged to pay for the fuel of a "barker," probably we would change our mind in favor of one not quite so loud in its exhaust.

As I am not in the Lockwood Square THE CENTRIC'S correspondence to come to his paragraph addressed to me, and at the risk of being a repeater will try to make the rule for squaring a circle plain, as it seems that "E." has not yet "caught on." The rule for finding the area or square surface of a circle as before given by myself and others is to multiply the diameter by itself and the product by the decimal .7854, which will give the area in feet or in inches, as the original figures may be. The reason for the rule is this: By multiplying the diameter by the diameter we get the square inches of a square of that size; thus, $12 \times 12 = 144$ square inches, which would be the contents of a square 12 inches on each side. Now "Eccentric" will take notice that a circle twelve inches in diameter laid out in the square of 12 inches, will only touch the sides of the square at four points, leaving outside of the circle quite a considerable portion of each corner of the square. These portions amount to nearly one-fourth of the square, or, to be more exact, $\frac{1}{4} \times 144 = 36$ of the sum. Now, if we multiply the square by the decimal .7854, pointing off four figures on the right, we find that we have decreased the number of square inches in the same proportion that 7854 bears to 10,000. $144 \times .7854 = 113.0976$ inches, the 113 being only a little over three-fourths as much as 144. Do you see?

Now if "Eccentric" will take the pains to multiply 10.5 by 10.5 and the product by .7854 and by 2, and 14.8492 by 14.8492 and the product by .7854, he will find that there is but a very small fraction of an inch difference in the two products, and that practically one 14.8492-inch cylinder is equal to two 10.5-inch cylinders of the same stroke.

Vulcan.

About the Swinerton.

The following communication from the pen of Mr. E. J. Rauch appeared in the *Locomotive Engineer* for July, viz.:

Editor Locomotive Engineer:

In your number for June appears an article signed "Fireman," criticising what I said about the Swinerton locomotive driving wheel in a back number of the *Firemen's Magazine*, and to which he takes exceptions. I simply wrote about what I saw or had been told by persons whom I have no reason to think were interested one way or another in the device. The action of the engine—or rather of the wheel—and her "pulling" qualities, I feel myself competent to pass judgment upon. I have had some experience with undue weight on driving wheels on locomotives. The single-wheeled engine No. 507, built by the Baldwin Locomotive Works, was a case in point. Later on, the engine built by the same company, and designed by Geo. W. Cushing, Superintendent of Motive Power for P. & R. R. Co., was another. Their driving boxes *could not be made to run cold*. When I first saw the "Onward" I looked for just such a state of affairs as "Fireman" claims to exist, viz: excessive weight on driving axles, and, to satisfy myself on the point, felt all the journals of the engine during and at the ends of the trips, and found no appreciable difference in the temperature—they were all cold. My authority for statement of weight on the "Onward's" driving axles is the general foreman of shops at Portland. I would much rather believe "Fireman" to be misinformed than that my informant told an untruth. I have met many shrewd Yankees; don't remember ever having run afoul of a foolish one. It would be supreme folly for the Swinerton Driving Wheel Company to misrepresent the weight of the driving wheels of the "Onward," when ten minutes on the scales of any railroad would expose the deception.

"Fireman" says the original weight on the drivers of the "Onward" was 41,000 pounds, and that, as a result, the boxes ran hot; he understands some of this weight has been taken off. Does he know how much weight was taken off? and if he does not, how does he know that my statement of the weight on her drivers is not correct?

I will not find fault with "Firemen" because he can not see the facets on the Swinerton wheel. I have met many men whose physical and mental vision were obtuse, but I have yet to meet the railroad engineer or fireman who ever knew a *flat spot to wear out of a locomotive wheel, driver, truck or tender!* See?

Truth sooner or later asserts itself. If the "faceted" wheel is all that its inventor claims for it, the fact will be manifested; if it is not, experiment will demonstrate that also. I would not have noticed the attack of Firemen on the device had he not made a *personal* reference to myself.

E. J. Rauch,
Road foremen of Engines, M. E. R. W., E. D.

Speed of Railroad Trains.

MR. EDITOR:—There have been so many statements published relative to the speed of railroad trains, and so many showings have been made by rival lines that the subject has become one of special interest, and I am, therefore, constrained to introduce in your columns the following data and tables embraced in an article captioned "The Speed of Railroad Trains," which I have clipped from the *Railroad and Engineering Journal*, viz:

"In a paper recently read by M. Banderall, before the French Association for the Advancement

ment of Science, the writer gives, incidentally, the entire length of railroad in Europe at 129,200 miles, of which Germany has 24,600; France, 21,300; Great Britain and Ireland, 19,000; Russia, 17,700 and Austria-Hungary, 15,400 miles, no other country having over 10,000 miles.

"The writer says that there are properly three classes of railroad speed, which are expressed in the distance run; these are as follows:

1. The *Commercial Speed*, which is obtained by dividing the total distance passed over between two points by the number of hours employed in the transit, without deducting the time taken by stoppages of different kinds. This speed is that which is most interesting to the public, and it is this speed which the tendency is to increase continually, chiefly by reducing as much as possible the number of stoppages. This commercial speed varies considerably in different countries, according to the circumstances, which include the nature of the traffic, the management, and, in some degree, the national habits. In England, for instance, fast time is considered more than economy, while in Germany the circumstances are exactly reversed.

2. The *Average Running Speed* has a character much narrower and more technical than commercial speed; this is obtained by dividing the distance between the terminal stations by the actual running time, deducting the time employed in stops. This speed is regulated by a number of circumstances, such as the profile of the line, the weight of trains, the class of locomotives used, the number of junctions, crossings, and other points at which it is necessary to reduce speed, and similar matters.

3. The *Actual Speed* really varies from one minute to another, and can only be accurately measured by some sort of speed-recording machine. The speed is seldom carefully ascertained, and is, indeed, of interest chiefly to the engineer and master mechanic, who desire to obtain exactly the power developed by the engine, the excellence of the track, the efficiency of the brakes, the good conditions of the signals, and many other matters connected with the management.

The table given below compares the commercial and the average running speed (in miles per hour) of several trains on English and French roads, and one German Express, to which is added the speed attained by several trains in America. It should be noted that this table does not include the exceptionally high rates of speed attained between London and Edinburgh in the recent contest between the two lines connecting those cities, which has been omitted for the reason that that fast service cannot properly be considered as an average or commercially successful performance, however interesting it may be as a specimen of what can be done upon occasions.

	Distance.	Commercial Speed.	Average Running Speed.
ENGLAND:			
London, Chatham & Dover	77.9	44.5	46.1
London, Brighton & S. Coast	50.3	46.4	47.8
London & Northwestern	159.1	45.4	47.4
Great Northern	188.3	50.1	51.3
FRANCE:			
Northern	183.9	42.9	43.8
Paris-Orleans	363.5	42.3	43.8
Eastern	275.3	40.0	41.8
Paris, Lyons & Mediterranean	536.3	35.1	36.1
GERMANY:			
Berlin-Cologne	365.4	37.6	40.6
UNITED STATES:			
New York-Pittsburgh	444.0	38.6	40.6
New York-Washington	229.2	38.2	40.5
New York-Buffalo	439.0	40.8	41.8
New York-Springfield	136.0	36.3	38.9

The longest runs made without stops in France

are on the Northern railroad, 103.2 miles in 2 hours, 17 minutes, an average of 45.3 miles an hour; on the Paris, Lyons & Mediterranean road, 99.4 miles in 2 hours, 38 minutes, an average of 37.3 miles an hour; on the Orleans line, 73.8 miles, at an average speed of 44.7 miles per hour; in England the longest run made without stopping is 105.4 miles in 1 hour, 37 minutes, an average of 53.9 miles an hour; in Germany the longest run without stops is 83.3 miles in 1 hour, 41 minutes, an average of 47.8 miles an hour; in Austria the Oriental Express has one run without stop between Buda-Pesth and Szegedin, 118 miles, an average speed of 37 miles an hour.

To make these long runs without stops, it is necessary to have tenders of large capacity or else to supply the road with track-tanks, from which the water may be taken up while running. The future increase in speed—at least in the commercial speed, which is the most important—must be made rather by omitting stops than by an increase in the regular running time and this can only be done as increased traffic demands, since the omission of stops implies additional train-service to accommodate the intermediate points between the leading stations where the fast trains stop.

The conclusion drawn is that England is at present clearly ahead in the speed of its trains, a fact which is largely due to the conditions and demands of the traffic there; in Germany and Austria there are only two or three really fast trains, and in France and the United States high speed is confined to a few exceptional trains, a circumstance due to the fact that there does not exist at present a sufficient demand to warrant the expense incurred in running fast trains, since it has been abundantly proved, in both these countries, that the highest grade of speed can be obtained should it be required.

It would appear by the above table that a few of the English and French railway lines surpass our American lines in the matter of speed made by some of their fast trains, but it will be a question of only a very short time when we shall have trains making fully as great a speed, and even now we find that many runs are being made in different sections of our country, which when the difference in the roads, both in regard to bed, curves and grades are taken into consideration, far surpass any performances of our transatlantic competitors. The recent tests of the "Strong" engine have caused some others to "let out their respective pets, and have proven that the locomotive of to-day is a great deal better machine than the one of fifteen years ago, and that there is marked improvement in every way, and that "Z," in the following communication on the "Strong," is fully sustained by facts:

"To the Editor of the Railroad Gazette:

I have been reading with much interest your criticism of the "Supplementary Paper on the Strong Locomotive," read before the American Society of Mechanical Engineers, and Mr. Dean's communication. It seems to me that Mr. Dean is laboring under a delusion, which is, that the common locomotive has been standing still for about fifteen years. Mr. Dean is correct if he compares the Strong locomotive with those locomotives used fifteen years since, but in no wise so if the comparison is made with the locomotives of to-day. Gradually the American locomotive has been improved, and this improvement has been accompanied by a change, quite considerable, in the steam regulation. This has resulted in a set of designs such that, from loco-

motives on the main lines of railroads, indicator cards are described, as shown in current issues of the railroad press, which are better than those shown from the Strong locomotive. A far more conclusive argument for Mr. Dean to use would be to accompany his communication by a sample card with all data, and properly authorized, and allow comparisons to be made by the reader directly.

From what has been shown it would look as if the superior qualities of the Strong locomotive result more from its excellent boiler than from its valve gear." Z.

The much-vaunted performance of the Strong does not seem to be so very marvelous when such runs as are below recorded are being made every week, and when even freight engines on the western plains frequently make 450 miles without a rest:

Engine No. 1,012 of the Philadelphia & Reading recently took a train of heavily loaded passenger cars from Camden to Atlantic City, N. J., in 58 minutes 40 seconds, the distance being 60 miles.

After the recent test of the Strong locomotive on the Philadelphia & Reading, between Philadelphia and Bound Brook, on train No. 505 (the "two-hour" train) the regular engines were "let out," and the train sheet shows a number of excellent performances. Engine 208, John Hogan, engineer, made 131 miles, from Hopewell to Weston, in 10½ minutes, equal to 77½ miles per hour. On June 20, engine 302, Engineer Butler, made 54.9 miles in 55 minutes, from start to stop, including a 1½ minute stop at Trenton Junction. These runs are, however, but little better than everyday work on this train.

Also the following;

The Pittsburgh, Fort Wayne & Chicago have issued a leaflet giving the record of a run made by the Pennsylvania Limited, from Fort Wayne to Chicago, on Sunday, May 19 last. The particulars are as follows:

Engine No. 200—Weight 91,900 lbs.; cylinders, 18x24 in.; drivers, 4, diameter, 62 in.; tank, capacity, 3,600 gallons; coal consumed, 13,335 lbs. Engineman, John S. Christie; fireman, E. E. Crawford. The train consisted of one combination, one diner, and three sleeping cars; weight, 438,500 lbs. Characteristics of road: Maximum ascending grades, 26 ft. per mile, 4.2 miles; 24 ft. per mile, 4.3 miles; 18 ft. per mile, 3.2 miles; number of curves, 23; maximum curvature, 5 degrees; average curvature, 2 degrees; time consumed, 2 hours 53 minutes; distance, 148.3 miles; average speed per hour, 49.7 miles; reduced speed and stops consumed 21 minutes; leaving actual running time, 158 minutes; average speed running, 56.3 miles; fastest long distance run, 57.1 miles in 60 minutes; fastest medium distance run, 29.2 miles in 27 minutes; fastest short distance run, 6.3 miles in 5 minutes, 20 seconds, or 71 miles per hour; longest distance run for water, 84.2 miles.

When such runs as these can be made, and duplicated at pleasure, on our comparatively crude beds, with their sharp curves and numerous grades, which are, to a great degree, absent from the foreign roads, it must be conceded that our machines are fully capable of doing anything that may be attempted in Europe or in the world. One item of the run on the Fort Wayne deserves special notice, and that is, that the fellow with the scoop, who is generally ignored in such reports, is mentioned by name in full, thus proving that his labor of getting away with the six and a half tons of fuel was appreciated, as it ought to be, and

that some part of the credit for the performance was due to his skill and endurance in keeping the pressure up to the mark, and thus furnishing to the engineer the material, without which the feat would have been impossible. This one item ought to prove an inspiration to the conscientious fireman to continue on "in well-doing, for in due time we shall reap if we faint not." *

More About the Hammer Blow.

MR. EDITOR:—In the Mechanical Department for August I find Mr. Lockwood still seeking for information on the above subject. Just how my answer to his questions can release him from his obligation to answer mine I can not see, but notwithstanding that, I will proceed to answer, as well as my information will permit, his series of questions.

First—The speed of translation forms no factor in the problem of counter-balancing a locomotive driver. All you have to do is to place sufficient weight with its center of gravity at the same distance from center of wheel as the center of crank-pin to balance the weight carried by the crank-pin. If the center of gravity of the counter-weight revolves in a less circle than the pin, its weight will have to be greater than the weight at the pin, and if the center of gravity of the weight revolves in a circle larger than that of the pin, it will have to be smaller or lighter. Again; the "said driver" does not combine the speed of rotation with the speed of translation. Speed means motion. And a single atom of matter can not move in a straight line and a curve at the same time. If it moves in a curve it is rotation or revolution. If it moves in a straight line it is translation. If Mr. Lockwood will consider these two motions separately, as they should be, he will see this question as I do.

Second—The axis of motion is *not on the rail*. The axis of a body is a center line through that body in a given direction. The *axis of motion* of a rotating body is a line drawn through the center of that body at right angles to the direction of its rotation. Suppose a railroad were built entirely around the earth, representing a true circle, with its center at the center of the earth, and a locomotive driver were placed on the rail and rotated in a given direction until it had made a complete revolution around the center of the earth. In this case we have two motions, rotation and revolution. The axis of the motion of rotation is at the center of the wheel. The axis of the motion of revolution is at the center of the earth. Neither is at the rail. Now, with reference to the movement of a driver on a level track, it has but one motion that has an axis, and that is its rotary motion. The motion of translation has its *line* of motion but not an *axis* of motion.

Third—I do not know what rule our company follows in estimating the amount of counter-balance, consequently can not answer your third and fourth questions, and not having access to the Master Mechanic's office I can not give you the data you ask.

Now, I sincerely hope Mr. Lockwood will reply as frankly to the various questions I have asked him as I have to his. If he does not I shall think the "bear" is giving the "dog" a pretty hard chase.

I do not think I made my statement of reasons for believing a locomotive of the ordinary pattern can be properly counter-balanced in the usual manner, quite complete. I cited instances of difference in the action of different locomotives under similar circumstances. I hold that if one locomotive of the ordinary style can be counter-balanced better in the usual manner than another, another one can be built that is still nearer perfect than that, and so on, up to a point that is so near perfect as to be harmless from the effects of bad balancing.

A. H. Tucker.

Discussing Instructions about Engine Running.

MR. EDITOR:—The following article captioned as above appeared in a recent number of the *National Car and Locomotive Builder*, viz:

In our last issue we mentioned that Mr. George H. Baker, an unusually well-informed engineer, was engaged giving instruction to the engineers of the C. B. & Q. system about economical methods of firing and operating locomotives. The "talks" given are said to excite great discussion among the men interested. They will stand about the round house for hours talking about the different points presented in the instructions, and freely giving their individual opinions of the same. A master mechanic at one of the division points was the other day listening to a group of firemen talking about the instructions. Said one: "He said the exhaust in going up the stack was an air pump; that each exhaust filled the inside of the stack just like a piston, and in going up the stack pumped air in through the fire." "Yes," said another, "and he told the engineers that one of the advantages gained by working their engines as far back as they could, was the exhausts were softer and made a lighter draft on the fire, which burned less coal and let the hot gases of the fire stay in contact longer with the flues and heating surface, and we got more heat out of them." Then another said, "Well, then, why the hell don't they put another piston on the other end and pull them back again." There was a roar of laughter from the crowd, under cover of which the listener got away.

The foregoing serves to point a double lesson, one part being that discussion of points is right and proper and will benefit all who engage in it, but secondly that the parties must be in earnest in their pursuit of knowledge and avoid all irrelevant and comical remarks for it is evident that the last remark above made was a squelcher, for while it raised a roar of laughter, it also put to flight any further serious consideration of the subject. *

The Railroads of the World.

MR. EDITOR;—But few people have any rational conception of the magnitude of the railway systems of the world and the following table, clipped from an exchange, will doubtless be of interest to students in that department of the world's industries:

The following figures are taken from the *Archiv für Eisenbahnwesen* for May-June, 1889. As the annual statements in that journal are quoted as a statistical authority, we reproduce the original figures in kilometres adding for convenience, the approximate equivalent in miles, reduced on the basis of 1.6 to 1. The mileage figures are for the date of December 31, 1887,

	Length of Line.		Per cent. increase in four years.
	Kilometres.	Approximate equivalent in miles.	
Germany	39,785	24,900	10.6
Austria and Hungary	24,432	15,300	18.6
Great Britain and Ireland	31,521	19,700	4.8
France	34,208	21,400	15.2
Russia	28,517	17,800	13.5
Italy	11,759	7,300	24.4
Belgium	4,760	3,000	10.2
Netherlands	2,957	1,800	17.3
Switzerland	2,919	1,800	2.6
Spain	9,309	5,800	12.8
Portugal	1,804	1,100	20.9
Denmark	1,965	1,200	9.1
Norway	1,562	1,000	0.8
Sweden	7,379	4,600	15.3
Servia	517	320	0
Roumania	2,405	1,500	60.3

*Almost wholly new.

	Length of Line.		Per cent. increase in four years.
	Kilometres.	Approximate equivalent in miles.	
New Zealand	2,900	1,800	25.4
Victoria	3,085	1,900	28.5
New South Wales	3,276	2,500	54.1
South Australia	2,340	1,500	56.0
Queensland	2,700	1,700	68.8
Tasmania	700	440	152.7
Western Australia	296	180	105.6
Total Australasia	15,297	9,500	47.7
Total for the World	547,872	342,400	23.6

Figures of capital, on the basis of the latest available estimates, are as follows:

	Date of estimate.	Capital per mile.
I. Europe.		
Germany	1888	\$87,000
Austria	1886	97,000
Great Britain and Ireland	1887	204,000
France	1855	127,000
Russia	1885	86,000
Italy	1884	88,000
Belgium	1887	122,000
Switzerland	1887	108,000
Spain	1884	85,000
Portugal	1882	59,000
Denmark	1888	40,000
Norway	1888	25,000
Sweden	1887	29,000
Estimated average for Europe as a whole		\$113,000
II. Non-European Countries.		
United States	1887	\$80,000
Canada	1888	56,000
Brazil	1886	50,000
Argentine Republic	1886	42,000
British India	1886	67,000
Cape Colony	1886	42,000
New South Wales	1888	62,000
South Australia	1887	28,000
Victoria	1888	66,000
Queensland	1886	31,000
New Zealand	1888	36,000
Estimated average for non-European countries		\$59,000

Multiplying these figures by the mileage in and out of Europe, respectively, we have the invested capital of railroads in Europe, amounting in round numbers to \$14,500,000,000, while that of the rest of the world amounts to something over \$12,000,000,000.

The proportion of double track in various countries is given as follows:

	Per cent.
England	54.1
France	37.3
Germany	28.4
Belgium	28.0
Holland	24.7
Russia	15.4
Switzerland	15.2
Austria	8.4
Italy	6.8
British India	6.5

The above tables show that of the total 342,400 miles of railroads of this globe, the North American continent has nearly one-half, being credited with 167,000 miles. It further shows that over one-fourth of these 167,000 miles were built in 1884, 1885, 1886, 1887, and that no other leading nation was adding to her railway mileage at the same rate. Parts of Australia and Japan have had the largest percentage of increase in

miles, while several portions of Africa and some of our South American Republics also range high in percentage in these four years. While America has nearly half the mileage of the world, the cost of the 129,900 miles of road in Europe, (being only a little over one-third of the total) is put down at \$14,500,000,000, while the other two-thirds cost about \$12,000,000,000. Owing to local circumstances the cost per mile in Great Britain is put at \$204,000, while in Sweden it is only \$29,000, and in the United States it is about \$60,000, averaging \$59,000 in all the non-European countries.

This would be a total of about \$26,500,000,000 invested in railroads, and this is a sum so vast that the mind can hardly conceive of its magnitude, and it is only by comparison that we can get some idea of it. If a man was to count \$100 bills at the rate of 100 per minute, for ten hours a day he would count \$6,000,000 per day, but it would yet take him nearly thirteen years to count it. Yet, immense as this sum is, it is all invested in railroads, and the machines upon which we make our living represent a large share of this investment and prove to us that we are a not inconsiderable factor in the movement of the commerce of the world.

Bridge Notes.

The Berlin Bridge Company, of East Berlin, Conn., will build the iron bridges on the extension of the Somerset road to Bingham, Me.

The King Iron Bridge & Manufacturing Company, Cleveland, O., is building eleven spans of iron bridge for the Richmond & Danville Railroad.

The Anniston & Montgomery has let the contract for the construction of an iron bridge, 725 feet long, over the Tallapoosa river to the Atlanta Bridge & Axle Company, of Atlanta, Ga.

The contract for building a bridge for the railroad over Smith river has been let to the San Francisco Bridge Company. The price is \$23,000. The bridge will be 730 feet long, with five spans, two of which will be 220 feet each in length, one of 96 feet, and two of 97 feet, exclusive of approaches.

The Puget Sound & Gray's Harbor road has let a contract to the San Francisco Bridge Company for the bridging and trestle work along the line from Summit to Montesano, W. T., for \$50,000. The only important bridge to be built is a single span across the Satsop river, 220 feet in length.

The Berlin Iron Bridge Company, of East Berlin, Conn., is erecting an iron bridge for the Somerset road at Caratunk Falls, Me., consisting of three spans, about 150 feet each. The same company has just completed twenty-three spans of bridge for the Hartford & Connecticut Western between Hartford and Canaan, Conn.

The Erie Car Works, Limited, has been awarded a contract for building 500 gondola coal cars for the Valley road of Ohio. It is expected to complete twelve cars a day, when work on them is commenced. The orders which the works now have are sufficient to keep it busy for nearly a year.

Locomotives.

The Northern Pacific has placed an order for 76 locomotives with the Baldwin works.

The Richmond & Danville has ordered three passenger engines of the Pittsburgh works.

The central of Georgia has ordered 20 locomotives of the Dickson Manufacturing Co., of Scranton, Pa.

Two large engines have just been received by the Union Pacific from the Schenectady Locomotive works.

The Old Colony Railroad shops at South Boston have just completed four heavy passenger engines for the road.

The Portland Locomotive Works of Portland, Me., last week completed two locomotives for the Maine Central.

The New York Locomotive Works, Rome, N. Y., are building four passenger engines for the Mobile & Ohio Railroad.

The Savannah, Americus & Montgomery this week received several of its new ten-wheel freight locomotives.

The East Tennessee, Virginia & Georgia has given an order for building 25 locomotives to the Schenectady Locomotive Works.

A new locomotive was completed last week at the Manchester Locomotive Works for the Atchison, Topeka & Santa Fe.

The Alabama Great Southern this week received three new mogul engines from the Baldwin Locomotive Works, of Philadelphia.

The Nova Scotia Central road has received from the Rogers Locomotive Works the third of an order for four locomotives.

The Cooke Locomotive Works, Patterson, N. J., recently delivered six passenger engines, with 18x24 in. cylinders, to the Newport News & Mississippi Valley Company.

The Lake Erie & Western has placed another order with the Brooks Locomotive Works for three heavy freight engines, being the third order given these works for locomotives this year.

The Rhode Island Locomotive Works has commenced delivering eight-wheel engines, with 18x24 cylinders, to the New York, New Haven & Hartford, which recently placed an order for 10 of them with these works.

The Boston, Revere Beach & Lynn road has just received from the Taunton Locomotive Manufacturing Co. two bogie engines. They are of the improved Fairlie type and were built largely from drawings furnished by the road.

Among other orders, the Baldwin Locomotive Works, Philadelphia, are filling one for 25 engines, with 18x24 in. cylinders, for the Texas & Pacific, and one for 15 freight engines for the Missouri, Kansas & Texas Railroad.

The Baldwin Locomotive Works recently completed their ten thousandth locomotive, which was a consolidation engine for the Northern Pacific. The first thousand was completed in 1861, the second in 1870, the third in 1872, the fourth in 1876 and the fifth in 1889. No. 10,000 weighs 75 tons, 67½ tons being on the eight 50-in. drivers. The cylinders are 22x28, boiler 72 in. diameter. There are 271 2¼ in. flues, and the total heating surface is 2,283 square feet.

LOCOMOTIVES FOR JAPAN.—The Manchester *Guardian* asserts that Japanese orders are again coming to England, some late orders having comprised 10 locomotives, about 100 cars, and many thousand casks of cement. The diversion of orders from England, which has lasted for some three years, is ascribed to a patriotic desire on the part of the railroad builders of Japan to secure the favorable influence of Germany and France in the matter of the treaty conference. That having failed, the orders, according to the *Guardian*, return to England.

Car Notes.

The Northern Pacific is in the market for 1,000 box cars.

The New York, Ontario & Western is asking bids for 1,000 freight cars.

Harrison & Co., of St. John, N. B., are building 75 platform cars for the Nova Scotia Central railroad.

The following orders for cars were let last week:

To the United States Rolling stock Co., 700 for the Georgia Pacific, 500 for the Alabama Midland and 500 for the San Antonio and Arkansas Pass.

To the Pullman Palace Car Co., 400 for the Georgia Pacific.

To the Haskell & Barker Car Co., Michigan City, Ind., 300 for the Iowa Central.

To the Missouri Car and Foundry Co., St. Louis, 200 for the Wabash Western and 51 for the Kansas City, Wyandotte & Northwestern.

To the Peninsular Car Co., Detroit, Mich., 200 for the New York, Lake Erie & Western.

The Brooklyn, Bath & West End road has received ten new open cars for summer excursion travel.

It is stated that the Canadian Pacific will establish large car works in Maine at a point on its line through that state.

The Pullman shops at Pullman, Ill., have completed 45 passenger cars for the Philadelphia & Atlantic City Railroad.

The Southern Pacific shops at Sacramento have just turned out a handsome new private car for President Leland Stanford.

The Indianapolis Car and Manufacturing Company recently delivered 100 fruit cars to the Louisville & Nashville Railroad.

The Michigan Car Company, Detroit, Mich., is building 600 box cars for the Toledo, St. Louis & Kansas City Railroad.

The Ohio Falls Car Company, Jeffersonville, Ind., has its passenger car shop busy on orders. The freight shop is building 200 box cars for a Southern road.

The Indianapolis Car Manufacturing Co. has been awarded the contract to build 500 box cars for the Cincinnati, Jackson & Mackinaw road.

The Philadelphia & Reading is said to have placed orders for 250 additional twin hopper, gondola cars of a capacity of 25 tons each. Five hundred cars of this kind are now being delivered.

The Louisville & Nashville has divided its contract for 500 more fruit cars, giving 200 of them to the Ohio Falls Car Works, at Jeffersonville, Ind., and 300 to the Missouri Car and Foundry Co., at St. Louis.

The Newburyport (Mass.) Car Co. has received an order for eight open cars, four iron and four wood, from Newport, R. I. The works are being run at full capacity. They have orders now for 10 cars for the Boston, Revere Beach & Lynn road.

The Atlantic Coast Line has given an order to the South Baltimore Car Works for 30 box cars, and to the Tridagar Works, of Richmond, Va., an order for 110 flat cars and 15 box cars.

The Barney & Smith Manufacturing Co., of Dayton, O., this week delivered a number of new passenger cars to the New York Central & Hudson River, part of a large order from that road.

There are now about 600 cars in service fitted with the Bossman ice tank. The Atchison, Topeka & Santa Fe has 200, the Kansas City, Fort Scott & Memphis 100, and 63 are run on the Illinois Central. In addition to this, 200 cars have just been completed by the Lafayette Car Works for the Louisville, New Albany & Chicago, and 25 with these improvements have been built for the Ohio & Mississippi.

About Railways.

Twenty Questions and Answers.

Scribner's Magazine.

1. How many miles of railway in the United States?

About 150,000 miles; half the mileage of the World.

2. How much have they cost?

Over \$9,000,000,000,000

3. How many people are employed by them.

More than 1,000,000.

4. What is the fastest time made by a train?

Ninety-two miles in 93 minutes, one mile being made in 46 seconds, on the Philadelphia and Reading Railroad.

5. What is the cost of a high-class, eight-wheel passenger locomotive?

About \$8,500.

6. What is the longest mileage operated by a single system?

Atchison, Topeka & Santa Fe system; about 8,000 miles.

7. What is the cost of a palace sleeping car?

About \$15,000, or 17,000 if "vestibuled."

8. What is the longest railway bridge-span in the United States?

Cantilever span, in the Poughkeepsie Bridge, 548 feet.

9. What is the highest railroad bridge in the United States?

Kinzau Viaduct, on the Erie Road, 305 feet high.

10. Who built the first locomotive in the United States.

Peter Cooper.

11. What road carries the largest number of passengers?

Manhattan Elevated Railroad, New York; 525,000 a day, or 191,625,000 yearly.

12. What is the average daily earning of an American locomotive?

About \$100.

13. What is the longest American railway tunnel?

Hoosac Tunnel, on the Fitchburg Railway 4½ miles.

14. What is the average cost of constructing a mile of railroad?

At the present time about \$30,000.

15. What is the highest railroad in the United States?

Denver and Rio Grande; Marshall Pass, 10,832 feet.

16. What are the chances of fatal accident in railway travel?

One killed in ten million. Statistics show more are killed by falling out of windows than in railway accidents.

17. What line of railway extends furthest east and west?

Canadian Pacific Railway running from Quebec to the Pacific Ocean.

18. How long does a steel rail last, with average wear?

About eighteen years.

19. What road carries the largest number of commuters?

Illinois Central, 4,828,128 in 1887.

20. What is the fastest time made between Jersey City and San Francisco?

Three days, 7 hours, 39 minutes and 15 seconds. Special theatrical train, June, 1886.

WOMAN'S DEPARTMENT

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to
MRS. IDA A. HARPER,
TERRE HAUTE, IND.

SEPTEMBER, 1889.

HUSBANDS WHO FLIRT.

In reading the correspondence from month to month one cannot but be painfully touched at the evident distress of so many wives over what may be termed the "flirting propensities" of the husbands. It is of course understood that not one wife out of a hundred will make her troubles known through the columns of the *Magazine* and hence this grievance must be widespread. The wives of railroad men must not imagine that this failing is confined to their husbands alone. The wives of professional men, business men, traveling men and workmen of all classes suffer much unhappiness because of the conduct of their husbands in this respect. It must be admitted that in some instances women themselves are guilty of the same indiscretion, but for various reasons, cases of this kind are comparatively few.

Women are not so exposed to temptation as are men. Their lives are spent for the most part in the retirement of home, and, busied with their cares and duties, they have neither the time nor the opportunity for flirtation and intrigue. Another reason why they do not commit this folly is because the world watches women very closely and criticises them very severely. The spirit that controlled the harem has not entirely ceased to exist. The slightest departure on the part of a woman from the arbitrary and iron-clad rules of propriety, calls forth a censure that is little short of ostracism. But the principal reason why husbands do not have as much occasion for complaint is because women are by nature more constant in their attachments and more conscientious in the discharge of duty. Most women are religious in sentiment and would regard the slightest infraction of the marriage vow as an unpardonable sin. The majority of women are satisfied to have a home and husband and children. These are what they married for and, if the husband shares this feeling, they settle down quietly, do not have to seek outside for happiness and marriage is not a failure.

There is, however, something in the character of many men, the result either of inheritance or training or habit or association, which makes it impossible for them to be contented for a very long time with anything or anybody. They crave a change and they are not anchored by any fixed principles. If girls waited until they were older before marrying, their judgment and experience would enable them to detect such a man and they would not commit the unfortunate mistake of taking him for a husband. There are occasions, however, when a woman is compelled to yield something of her strict ideas of the proprieties of married life. Some husbands will not take the rigid view of the duties implied by the marriage vow which are entertained by their wives. They will fulfill the letter but not the spirit of their obligation. They do not intend to be unfaithful to their wives but they do not consider that what they call "harmless flirtation" comes under that head. To wave a handkerchief, to throw a kiss, to give and receive soft compliments, to take a girl for a walk or a ride when they are away from home, they do not consider anything particularly wrong. There is a bluntness of the moral perception which cannot comprehend the fine sense of honor possessed by the true wife. If you appeal to them by saying, "Would you be willing your wife should take this liberty?" they reply, "O, that is a different thing," which, interpreted, means, "She is in my power and I am not in hers." These men have not the faintest conception of the sorrows and unhappiness which their wives suffer from these things; it is indeed doubtful if even they can understand the awful anguish of spirit which overwhelms the wife when she learns that they have broken the seventh commandment.

One always longs to suggest some remedy to these wives whose life is made so miserable by this unfeeling conduct on the part of the husbands, but this is almost impossible to do. Each man must be managed according to his disposition. Wives must be exceedingly careful not to give way to jealousy without cause and when there is no doubt but that the cause exists the matter must be most delicately managed. Some men may be won back with kindness but it is very hard to ask a wife to assume her sweetest smile and most enticing manners when her heart is bursting with grief and indignation. Other cases are beyond gentle means and must be met with prompt and vigorous measures. And yet how can a woman be independent when her husband holds the pocketbook and the power to make the living and there are helpless and dependent children?

If these flirtations were the beginning and the end they might be endured, but,

just as the first glass of beer very frequently leads to habitual drunkenness, so these slight deviations from the straight path of morality many times result in the worst form of infidelity. When this happens, God help the wife! She is beyond any human consolation. The most important thing is to choose for a husband a man who does not need reforming, and after marriage look well to the ways of your household, give to your husband full measure of love and attention and if he is a man of any honor, of any gratitude, of any appreciation, he will be loving, considerate and faithful unto death.

WASHINGTON, IND., Aug. 1, 1889.

To Woman's Department:

The July number of the excellent *Magazine* lies before me and I feel sure I do not merit the cognomen of a regular contributor, but I do not think I am greatly missed, for there are so many excellent writers. Now, I must say some of you dear ladies are sitting down a little too hard on Shandy Maguire. I, for one, am proud to own him as an esteemed friend. It is with Shandy as it is with the world in general, treat him fairly, and he will return kindness for kindness, but if you see fit to sling sarcasm at him, he will retaliate, and who can blame him? You must not take everything he says in earnest. He writes to amuse, and we should so consider his writings. He would no more do an unworthy action than any of the rest of us. Shandy is a gentleman, treat him as one and you will find him so. Go on, Shandy, and as the old song says, "You have one friend at least if you cannot find more."

There is one other subject I wish to mention. Scarcely a *Magazine* appears but that we see the name of E. V. Debs, honored and esteemed. Now, I am generally plain spoken, and also believe in giving honor where honor is due, and I agree with all who choose to honor Mr. Debs, and am proud of the fact that he is one of my most esteemed friends and has been for years. But I will tell you something that perhaps the majority of our readers do not consider. Let the aged and estimable parents also be granted some of the honor due them for giving to the world such a worthy son. I know these dear, good people well; and with such parents and such a bringing up, it would be impossible for Eugene V. Debs to be anything but what he is. We often praise the clear running stream that flows so pure and sweet thro' our landscapes and meadows, and it is right we should do so. But we must not forget the fountain head that gives to us that stream and for which we should have equal praise. All honor and glory to the name of Debs, but let us not forget that good, honest, loving old couple living so quietly and happily at their home in Terre Haute. It would be as difficult for E. V. Debs to do a wrong action as it is for the majority of mankind to do a right one. The principles instilled into his nature are too deeply rooted to grow in any but the

right direction and to his worthy parents we concede the credit due them.

The boys of the O. & M. are very proud of their new shops at this place and well they may be, for they are the finest in the United States. We thought Schemerhorn a perfect saint, but one day while about a mile east of town we saw him wave, yes, actually wave, at—well, we won't give him away this time. Jim Hagan is one of the most popular firemen on the road, but if I commence naming the most popular my letter will get too long. In the near future I will write up our O. & M. boys and touch them up a little. Some unhung scoundrel tore up a rail off the O. & M. track about fifty miles east of St. Louis about 12 P. M. on the night of the 5th, and No. 65 engine with sixteen loaded cars were overturned. It was a singular coincidence that the caboose was also No. 65. Bro. Jesse Crump, of No. 165, was on the engine and had his hand mashed badly. Firemen Wendling was also severely bruised, but the engineer, Ratspinner, escaped uninjured. Their escape was a miracle. There is no punishment too great for such scoundrels; for a train wrecker or a spotter I have no mercy. In my estimation they are the most despicable objects on earth.

I had the pleasure of meeting President McKeen of the Vandalla, at Terre Haute, lately. Mr. McKeen's name is well known to the readers of the *Magazine*. I found him to be everything represented, a perfect gentleman, sociable and kind in the extreme, and I no longer wonder he is so very popular.

Our poet friend, Geo. W. Hall, of Stanberry, Mo., has composed a poem entitled, *Our Flag*, which he disposes of at 10 cents a copy. The price will not hurt anyone and the sender will be aiding a noble cause. The (*Galutious Fourth* is over once more, and now for a space we shall be reading the fatal and non-fatal accidents, results of glorification.) While at Terre Haute, lately we had the pleasure of visiting Mr. and Mrs. Selby, and of nursing their beautiful babe, Howard Debs Selby; this is another of earth's beautiful darlings, and no wonder the fond parents idolize him. We hope dear little Howard will live to return their care and love a hundred fold. With greeting to all old friends, and also new ones, I am, as ever,

Mrs. Henry B. Jones.

[Why, how do you do, Mrs. Jones? We are very glad to hear from you again. The men have a faithful friend in you and they value your confidence very highly. The *Woman's Department* has never entertained a doubt of Shandy Maguire's thorough integrity. We only sounded a note of warning because we thought the brother and sisters were getting a little giddy.]

Your tribute to the parents of Mr. Debs is richly deserved. Their family of six cultured, intelligent children, loved and honored by all who know them, are eloquent witnesses of a wise parental training and a beautiful home life.]

MISCELLANEOUS.

Mrs. Elizabeth Colby, of Bingham, Me., has been appointed by Gov. Bedwell to solemnize marriages and take acknowledgement of deeds.

Salt Lake recently admitted a woman to the bar, and one of the test oaths that she was obliged to take was that she "would henceforth live with only one wife."

"Oh, yes," he said, "I am very fond of boys," and, as a snowball struck the back of his neck, he added, "I feel as though I could eat a couple, this minute, boiled!"

Sneak thief (who had just deciphered the name on the doorplate)—"Ma'am, your husband, Mr. Branson, sent me for his overcoat."

Mrs. Branson—"O, he did, eh? Well, as he's been dead ten years, I had thought he'd send for his linen duster."—*Time*.

Miss A. A. Crisp, a professional nurse, in charge of a hospital in New Zealand, who had received royal decorations for her service in South Africa, Egypt and Turkey, was married recently to one of the doctors of the hospital, and wore as her wedding costume the uniform of her profession. Nineteen nurses, also in uniform, were her bridesmaids.

"You love my daughter?" said the old man. "Love her!" he exclaimed passionately, "Why, sir, I would die for her! For one soft glance from those sweet eyes I would hurl myself from yonder cliff and perish, a bleeding, bruised mass, upon the rocks two hundred feet below!" The old man shook his head. "I'm something of a liar myself," he said, "and one is enough for a small family like mine."

A New York City lady lately gave an elegant dinner to the immediate relatives of her cook, Mary Moriarity, to celebrate the fact that for twenty-five years she had remained with her mistress. At this silver dinner the maid sat at the right of her mistress who proposed the first toast, "To the health of Mary Moriarity, who has just eaten the first dinner not prepared by her hands in this house for a quarter of a century."

A writer in the San Francisco *Examiner* says the American woman is the most changeable of her sex. The oak-and-vine simile typifies the girl of forty years ago, and this kind of girl was cultivated by representatives of the oak because they thought they would appear grander to a clinging, viney woman than to any other kind. But they finally found out that a woman who clings and has to be carried about physically, intellectually and morally, is twice as much trouble and vastly insipid. The Clinging Woman has evolved into the Aspiring Woman, and she into the Business Girl, who neither looks up to nor down upon the other sex, but regards it with an air of saying: "You are a man and a brother." The vine has become a strong, graceful little sapling, and whether it ever grows to be a tree or not, it can never be a vine again.

SUFFRAGE.

There are ten women to one man who are actively engaged in the study and work for the poor and unfortunate, also in organized and systematic efforts in their behalf.

At a meeting of the Nebraska State Grange, Patrons of Husbandry, December last, a resolution was unanimously adopted favorable to equal suffrage to woman and also one favoring the prohibition of the liquor traffic.

The Leavenworth *Sun* says: Here in Kansas we have grappled with the prohibition problem, and demonstrated that women make as intelligent voters as men, and that their consciences are the inspiration that impels them to vote oftener right than men.

There are twenty thousand woman farmers, and whether in Ireland or England the land question is one of the most prominent subjects of our politics, and one largely affecting women. Is it right that those who employ labor should have no voice in making the laborers' homes happier and better?—*Laura Ormiston Chant*.

Gentlemen, be fair. Who are you, what are you, and whence do you come, that you undertake to represent me? Every creature stands alone and must represent himself. Human rights are not to be rummaged for in musty parchments. They are written as with a sunbeam by the hand of God in the volume of nature.—*Attorney Elizabeth Eaglesfield*.

It is a fact admitting of no debate that discriminations are made against women under our laws which are not made against men. One of the most familiar of these is that which affects woman who hold property. Under the laws of this State women are obliged to pay taxes on property they hold, but can have no voice in administering the government for whose support they are taxed. Taxation without representation is an anomaly in republican government. Worse than this, it is a gross injustice.

There are four kinds of suffrage in the Province of Ontario—the Dominion franchise, the Provincial franchise, the Municipal franchise and the School Board franchise. In the first two women have no part. Municipal franchise is exercised by single women and widows who have the qualifications required of men; and in the school franchise there is no distinction of sex, married women voting as well as spinsters. An effort is now making to extend to married women the municipal suffrage which has long been enjoyed by their single sisters. The *Canada Citizen* vigorously champions the movement. Suffrage in the Dominion, it says, is based upon property. When all a wife's property by law belonged to her husband, of course a married woman could not vote. The property laws have been changed, and thousands of married women now own property in their own right, and pay taxed on it. Why, then, should they not have the suffrage?

INDUSTRIES.

The New Orleans *Picayune* says that two of the prettiest tete-a-tete tea tables that have been introduced by furniture dealers this season, were designed by women, and one of the handsomest cabinets that has ever appeared was designed by a woman.

Mrs. Virginia C. Meredith, of Cambridge, Ind., holds high rank among the short-horn cattle-breeders of the State. She took personal charge of a large farm and herds at her husband's death, a few years ago, and has been remarkably successful.

One of the few female architects of the world is Miss Laura White, who is practicing her profession in Ashland, Ky. She graduated in architecture at Michigan University, and then studied in Paris. She was noted in Michigan as a mathematician, and was the first student at Ann Arbor to solve a problem that had been sent over by one of the great English Universities.

Two of the largest individual owners of sheep and cattle live in Texas, and are women. One of them, the Widow Callahan, owns about fifty thousand sheep. The other, Mrs. Rogers, is worth \$1,000,000.

There is a woman in Belfast, Me., who cares little for needlework, but much for mechanics and she is now regularly learning the trade of a machinist in one of the shops of the city. The proprietor says she takes hold of the work as readily as any apprentice he ever had. She wears a big apron over her dress, and stands up to the lathe as if she enjoyed it.

Mrs. Florence M. Adkinson, of Indianapolis, writes of Indiana women to *The Woman's Journal* in which she says that Mrs. Kate Busiek, of Wabash, Ind., is an active member of the Indiana Jersey Cattle Breeders' Association, and presented a paper on dairy interests at its recent annual meeting. Mrs. Busiek is the owner and manager of a stock farm and herd of Jersey cattle worth \$50,000. She has personally attended to and developed her business from its beginning, and is regarded as an authority on all matters pertaining to cattle-raising and dairy matters.

One is struck with the fact that the sphere of woman in England is not exactly coterminous with hersphere in America. She finds free access to some callings there which she scarcely enters here, and *vice versa*. I do not think that the work of teaching in England is so nearly monopolized by women as in this country. The teachers, I judge, are largely men. Nor did I find many evidences that women are generally employed as stenographers and type writers in offices and counting-rooms. On the other hand, the business of inn-keeping is, to a large extent, in the hands of women. The hotel clerk is almost always a woman; the proprietor and manager of the hotel is very often a woman. Some of the very best of the old-fashioned English inns in the provincial towns are under female management.

TEMPERANCE.

Bishop Merrill, of the M. E. Church, advocates the freedom of the pulpit to women the same as to men.

The W. O. T. U. of Minneapolis will soon open a large coffee palace, where two thousand people can be fed in one day.

The Pawtucket, R. I., Young Woman's Christian Temperance Union has obtained permission to distribute "tobacco leaflets" in all the public schools.

More than \$6,000 worth of temperance literature has already been shipped to Paris for the W. C. T. U. exhibit at the World's Fair, which will open on the 5th of May.

It may be a glorious thing to pull a drunken man out of a hole. But it is an infinitely more glorious thing to plug up the hole.—*Major Hilton*.

Every beer saloon is a primary school in intemperance; every gilded drinking-hell is an academy wherein men graduate in this vice.

The *Palm Leaf*, published at Bombay, says that the Maharajah of the State of Baroda and his entire court are total abstainers, and do all in their power to discourage the drinking habits of the people, but that the British government is making success difficult.

The Northwestern Life Insurance Company of Milwaukee has decided to refuse a life insurance policy to any lager-beer brewer or to any man employed in a lager-beer brewery, stating that the business is injured by the shortened lives of men who drink lager-beer.

A senator asked Mrs. Sallie Chapin why women did not leave the temperance work to men, to make the laws; they would be responsible and take the consequences. "Because," she answered, "you do the work now, and women take the consequences."—*White Ribbon Herald*.

An appalling statement is made by the committee on minors, in the twelfth annual report of the Society for the Prevention of Crime in New York City. It is as follows: "Careful investigation shows that at least 150,000 children, mostly very young, are in the habit of daily visiting the saloons of the city. It is a fact well known to your committee, that in a large number of drinking places, bar-tenders are in the habit of giving little ones candies and pennies to induce them to patronize their places."

A writer in the Cleveland, Ohio, *Leader* says: No man of ordinary observation but knows that the custom of treating in saloons—unknown in any country but this—is the cause of more drunkenness than any other thing. Thousands of men are constantly drawn into drunken sprees by it who would otherwise have remained sober men. It is very rare that a man will enter a saloon and deliberately sit down to get drunk in unsocial loneliness. It is this half-fellow-well-met business of "Come, Gus, what'll you take?" that is spreading the vice of drunkenness all over the land."

*For Woman's Department:***IS MARRIAGE A FAILURE?**

The noonday meal was over.
 The dishes were cleared away,
 My husband and I were sitting
 In our little front room to day.
 He was looking over the *Magazine*,
 With its witty verse and prose,
 On the subject, "Is Marriage a Failure?"
 And he said, "Why don't you write, Rose,
 And give them your views on the question?"
 Said I, with a smile, "I'll try,
 For indeed it's an awful failure."
 [That was just a "small joke," not a lie.]

So if you will kindly allow me,
 In your pages a little place,
 I will try to condense my scattered thoughts
 To the smallest possible space—
 For my husband and I think firmly
 One marriage successful at least;
 That our sorrows have been much lighter,
 And our happiness much increased,
 Since we vowed to love and cherish,
 And devote to each other our lives.
 So I'll give you a good receipt or two,
 For happy husbands and wives,
 And like the receipts in the cookery books,
 I can say, "They've been thoroughly tested,"
 And will be, if followed faithfully out,
 Of value to those interested.

First, don't choose a man for his money,
 Or a wife for her beauty so fair,
 But sensibly think while choosing,
 Of qualities certain to wear.
 Don't board; set up a home of your own,
 Though ever so humble it be.
 If your money is little, let love be great,
 And surely you'll happiness see.
 Don't flirt, nor loaf, nor quarrel, nor waste;
 Don't look for sunshine away,
 Be tender and kind,
 If there's worry don't mind,
 As for work, love turns it to play.

Wives, study your husband's pleasure,
 And husband's when 'round about home,
 Don't be too "heap big chief" to help a tired wife,
 'Tis better than down town to roam.
 Don't trust the cooking, (road to man's heart),
 To a "hired girl's" finger's unskilled,
 But try with your might
 To cook things just right,
 And see that the bucket's well filled.

I'd like to say more, but the editor's frown
 I feel, although I can't see,
 And I think if you'll heed my advice as above,
 On this subject we all can agree.

—Rose.

P. S.—Sisters, pay no attention to Shandy.
 He's "only just fooling," you know,
 'Twould please him to be "sat down upon,"
 And so we will let him go,
 For his wife, I'm sure, if she only chose,
 Could lead this boaster around by the nose.

[The Editor would never "frown" if all
 the communications were as readable as
 this.]

SAN ANTONIO, TEXAS, June 18, 1889.

To Woman's Department:

I have been reading the *Magazine* for some
 time and have become very much interested, es-
 pecially in the Woman's Department, and have
 often thought I would like to reply to some of
 the letters, but have been afraid of the waste
 basket. However, I have plucked up courage to
 make the attempt.

"Is Marriage a Failure?" seems at present to be
 a subject for argument. I think for some, mar-
 riage is a failure, and the some are principally

the sisters. But whose fault is it if marriage is a
 failure when husbands go flirting and masquer-
 ading, and leave their wives at home taking care
 of the twins, as Shandy says so boastfully he
 does? When a husband asks other ladies to
 marry him, when he writes letters for publica-
 tion telling all his wife's failings and short-
 comings, can he expect marriage to be anything
 else but a failure? We ladies don't complain,
 generally speaking, when we have to be cook,
 chambermaid, washwoman, nurse, and do the
 work of three, but what we do complain of is
 husbands preaching that marriage is a failure
 when they know they are better off than when
 they are single. But then, you know, it is a man's
 nature to be dissatisfied. Father Adam had a
 monopoly, but he could not be happy without
 someone to crow over. For a while he knocked
 around the garden of Eden, then went to the
 house, but could not cook his own supper. There
 was no stove, and no wood chopped, and things
 were in a bad shape. The next morning it was
 the same thing; he had to make his own bed,
 and sweep out. His socks were dirty, and he
 could not shape those fig leaves into another
 pair, so he was discontented and went moping
 around like a stray dog, and God saw something
 was wanting, so he created Eve and made her
 just such a woman as he thought Adam should
 have. At first he was pleased. He embraced
 her and waited upon her, told her how hand-
 some she was, and all that sort of thing. But,
 manlike, when the honeymoon was over, he be-
 gan finding fault with her. Nothing on the table
 pleased him; he told her how he cooked be-
 fore he was married, and what delicious fruit he
 had, till the poor soul was at her wit's end to
 know what to prepare to suit his taste. And as
 she had served in various ways all the different
 fruits in the garden, except that of the forbidden
 tree, she at last, to please him, set it before him;
 and what does he do when called to account for
 eating it, but stand on one foot, after creeping
 behind Eve, and says: "The woman you gave me
 picked the apple and gave it to me, and, of course,
 I'm not to blame." I presume from that day
 Adam declared marriage a failure. But enough
 for this time. Expecting to hear something
 smart from Shandy or some other henpecked
 husband, I sign myself,

C. G. D., a Fireman's Wife.

ONE of our correspondents in a private
 letter says:

It is very interesting for me to read the differ-
 ent opinions on "Is Marriage a Failure?" If I
 were to give my own personal experience in the
 matter I believe I could muster up quite a letter
 on the subject, but so many excellent letters have
 already been published in regard to that matter,
 I would not dare to venture. I'm afraid Shandy
 Maguire has got himself into trouble writing
 such nonsense, but I think some of the ladies,
 are as much to blame as he is; but outside of
 that I always admired his poetry. With best
 wishes, I am, Yours very truly,

For Woman's Department:

IF NOT, WHAT IS IT?

How well I remember the home of my girlhood,
The smooth grassy lawn with its fountain and
flowers,
The stately, old trees 'neath whose wide-spread
branches,
I've lazily swung in the hammock for hours.
The cool, broad piazza, the vine-covered arbor,
Where oft in the twilight I cosily sat,
With the tall, hated suitor, who came in the
evening,
And told me more lies than I'll ever forget.

I remember the church in the dim, hazy distance,
Where we were made one, that fine morning in
May.

I remember the long wedding tour that followed
And also the bills that papa had to pay.
I think of those days as I darn his old stockings,
Or remodel the trousers worn thin on the knee.
While my love puts his head in the door and
jerks out
"Goin' out to meet a feller, don't set up for me."

And somehow it brings back the days that have
vanished
When he sat by my side till the peep of the day,
And then I could hardly persuade him to leave
me,
But now its much harder to coax him to stay.
Alas, for the flowers, the books and the bonbons,
He so lavishly furnished me with in those days,
And then to the question "Is marriage a failure?"
You may put my name down on the side with
the years.

LOWELL, MASS.

G. M.

SINCERITY.

One of the rarest virtues, and at the same time, the best, in my opinion, is sincerity. What an agreeable world this would be to live in if every good wish expressed in our behalf, either personally or verbally, was indeed the outcome of an honest heart, and not, as is often the case, mere empty compliments. Have we not come in contact with people who were most cordial and friendly while conversing with us, and perhaps the next person they chanced to meet we were literally torn to pieces and our good intentions entirely misrepresented? But it is generally the privilege of those who are endowed with tolerable reasoning power, to distinguish the real from the false. Those who are naturally sincere can not fail to appreciate the friendship of a kindred spirit in that respect. They may be poor and uneducated, but their companionship is a pleasure to us, because we know that every word uttered by them springs from a truthful heart. In the hour of affliction or sorrow, when the heart is bowed down with grief, we naturally turn to them for sympathy and consolation. We may possess innumerable commendable qualities, such as patience, self denial, generosity, etc., but if we lack that one good trait, sincerity, which ranks amongst the foremost attributes in forming that colossal pyramid called character, that structure is sadly incomplete. If we wish to gain the respect and confidence of our fellowmen, by all means let us cultivate and foster that rare virtue, sincerity.

Mrs. C. S. Miller.

GOODLAND, KANSAS, June 14, 1889.

To Woman's Department:

Tip Top Lodge, No. 396, B. of L. F., gave their first grand ball on May 2, 1889, which was a grand success in every respect, being the largest ball ever given in Goodland. The *Grand March*, consisting of 100 couples, was led by Master Mechanic McDugal and wife. The music was grand, by Prof. Brigley's *Denver orchestra*.

The committee on arrangements John Lamb (Oh, so gentle), J. H. Shaw, in his best; H. F. Keith, all smiles of course; C. C. Wiley and C. V. Mixer. The committee on invitation were C. C. Sutherland, D. A. Harding and C. C. Hamlin. Mr. Sutherland was kept busy selling button-hole bouquets, especially to the ladies. Mr. Hamlin *mashed* all the girls and was solid Muldoon all the evening, and has the fireman's swing to perfection. The reception committee were Mr. and Mrs. Dixon, Mr. and Mrs. Sims, Mr. and Mrs. Latchford, Mr. Mrs. Wiley, and Mr. and Mrs. Fuller; All took a prominent part. The floor Committee were our Foreman, Mr. Geo. Kirk, and every member returns his sincere thanks to him for the interest he took in hall decoration. He is a Brotherhood man from the word *go*, and a friend to the B. of L. F. Our Train Master, W. H. Stillwell, Oh, how gracefully he did dance the *glide*! John Boyle was master of ceremonies.

Sorry to say that Engineer Scott and his fireman, O'Brien could not attend, as they were *snow* bound in Phillipsburg.

The hall was elaborately decorated with two headlights and twenty-five red, white and green lanterns suspended from the ceiling amidst festoons of evergreen boughs. Mirrors and flags decorated the sides. Most conspicuous among the decorations was an engine painted on canvas and bearing the motto of our Order, "Benevolence, Sobriety and Industry." The engine being painted on the tank C. K. & N. by engineer Lou Patrick. Also Pamer Lake was represented.

A fine supper was given at the R. R. hotel, by John Greer, which was highly appreciated by all.

Will close by saying that the boys of No. 396 feel justly proud over their first attempt at an annual ball.

Miss May O'Brien.

HINTON, WEST VIRGINIA, July 19, 1889.

To Woman's Department:

Having seen many interesting articles in your interesting journal in reference to different Lodges, I thought perhaps a word from Hinton Lodge, No. 236, would be of some interest to its many readers.

This Lodge is in a very prosperous condition and bids fair to be "one of the first" ere long. The members are all honest, upright young men and are sure to come to the front. The fireman's life is a very trying one and they deserve the sympathy of all. They look danger in the face on every side. Truly they are a band of noble-hearted men. Wishing the Brotherhood all the success imaginable, I am,

Most respectfully,

The Firemen's Friend.

Correspondence must in all cases be brief and to the point.

Subscriptions must begin with the January, April, July or October number and expire with the year.

Changes of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

SEPTEMBER, 1889.

THE railroad men, who make Pittsburg their homes, have contributed \$1,995.90 to the Johnstown sufferers.

DURING the coming season, the Denver & Rio Grande Western Railroad, will expend \$3,000,000 in building seventy-five miles of new road.

THE Louisville & Nashville road will expend, during the present season \$500,000 in the improvements of its road bed.

THE scab C., B. & Q. road, on the 1st of July last, made another effort to reduce expenses. The bankrupt concern has found even scabs too expensive.

A LANDSCAPE gardener has been employed by the Chattanooga & St. Louis Railroad Company, who will beautify all the grounds around and near the stations on the line of the road.

It is stated that the earnings of the Wabash road for five months, ending June 1, were only \$11,000 short of those for the same time in 1887, which were the largest ever made by the road.

THE carpenters of Kansas City, not long since, struck for nine hours for a day's work, and all except about 150 gained their point. They agreed to work nine hours for nine hours' pay. For instance, if wages were \$2.00 for ten hours, they will receive \$1.80 for nine hours.

THE Atchison, Topeka & Santa Fe road issued \$10,000,000 second mortgage bonds, and at last accounts \$7,000,000 of the amount had been sold.

THE Richmond & Danville railroad now extends from Washington, D. C., to Greenville, Miss., a distance of something more than 1,100 miles.

THE *Bee Line Gazette* contemplates changing its name, and hereafter it may possibly be known as the *Big Four Gazette*. Why not the *Big Four Bee-Gazette*? By all means keep the "busy bee" in the name.

THE *Railroad Gazette*, of recent date, refers to the car-coupler question as follows:

A Superintendent says the employés who are the most interested do not ask for any improved car-couplers. This seems to be about correct. The brakemen who are killed should be the ones the most interested. No one ever heard of a dead brakeman asking for an improved coupler. The logic of this Superintendent is very convincing.

T. V. POWDERLY, Grand Master Workman K. of L., has issued an address relating to conditions, present and past, in Pennsylvania, in which he pays his respects to the Reading Railroad and Austin Corbin. Elsewhere we reproduce Mr. Powderly's address. It ought to have a wide reading, and it ought to bear good fruit in Pennsylvania and elsewhere throughout the country.

HERE is something new under the sun. When, in the Fitchburg repair shops, an engine is ready to leave the shop, instead of firing it up, the boiler is charged with air at about eighty pounds pressure from an old locomotive air-pump mounted in a convenient place against the wall, having a hose connection to the boiler. With the above pressure the engine can be run out of the shop and around to its stall in the round house.

It is stated that there were seventy-nine railroad accidents during the month of June. Thirty-three collisions, forty-two derailments and four others, in which thirty-five persons were killed and one hundred and two injured. There were fifteen rear collisions, eleven butting and three crossing. Of the derailments, four were on account of broken bridge or trestle, four on account of misplaced switch, six from cattle on track and twenty unexplained. But one was from malicious obstruction. If the June record is maintained throughout the year, there will be 420 killed and 1,224 injured, a total of killed and injured of 1,644.

TRIBUTE TO AN OFFICIAL.

We have received the *Meadville, Pa., Tribune*, of July 1st, containing an account of a most delightful incident in the business career of Mr. C. A. Brunn, who for a number of years had been Superintendent of the Eastern Division of the New York, Pennsylvania & Ohio Railroad, with headquarters at Meadville. Mr. Brunn, having been called to the more important duty of managing the Buffalo Division of the N. Y., L. E. & W., his numerous friends made this the occasion for presenting him with an elegant gold watch and chain, with a monogram charm attached, suitably inscribed, as a testimonial of their friendship and esteem. Nor was this all. Mr. Brunn was banqueted in right royal style at the Commercial Hotel in Meadville, where, for a few hours, he was the guest of his friends, who came in large numbers to bear testimony in person or friendship and hearty good wishes for the health, happiness and prosperity of a man, who in every relation of life, had shown himself worthy of the respect and confidence of his fellow men. It goes without the saying that the occasion was one of unalloyed pleasure. A number of felicitous speeches were made at the banquet board, and finally Mr. Brunn addressed the sympathetic company as follows:

"GENTLEMEN—I can hardly find words to express thanks for this generous reception, entirely unexpected on my part. I came among you some three years ago a total stranger. Before coming here I had not been west of Jamestown, but when I arrived here I was most cordially received by you all. We have had some trouble on the line but have overcome it, and I think that to-day the work speaks for itself which we have struggled so hard to accomplish. My support has ever been earnest, to which fact I attribute largely the success which has greeted our united efforts. I regret to leave your beautiful city and the pleasant associations I have formed here, but I am given no option other than to obey. In my heart I thank you for this kind reception, and hope to meet you all again."

The incident shows how easily it is for railroad officials to win the lasting friendship of employes, who are quick to appreciate generous treatment, and quite as ready to comprehend conduct on the part of officials, fruitful only of contempt.

* *

It is rumored that the Inter-state Commerce Commission will incorporate into the general rules governing the movement of trains a clause requiring a brakeman for each coach on every passenger train. It is said that "the present system of air-brakes is regarded a sufficient precaution, together with the complement of one or two brakemen on each train, when there is no danger; but the idea is to guard against emergencies, and to have the trains manned so as to be equal to all occasions. The recommenda-

tions of the labor unions require that these brakemen, placed on each coach, be required to stand at the brake, like a street-car driver is required to be at his brake, and on duty, so that in the event of an emergency the brakes may be applied immediately, and the movement of the train checked in the quickest time possible. A great many destructive accidents occur by the refusal of the air-brakes to operate. This extra force of brakemen would overcome the possibility of an accident in this direction. It is argued that the engineer is sufficiently cautious, and invariably discovers an impending accident, but that, though he gives warning with the whistle and applies the air-brakes, he is not given the proper assistance on the train, and the accident is therefore inevitable, whereby, with the precautions recommended, many accidents would be avoided." If the contemplated rule should be introduced, it will create a demand for brakemen, and give the Brakemen's Brotherhood a boom.

* *

THE *Philadelphia Record* recently published the following item:

Officials in the Superintendent's office of the Philadelphia & Reading railroad laughed yesterday at the report that members of labor organizations will be encouraged to join the company secretly in order to conduct a fight against President Corbin. "An employe cannot belong to a labor organization long without our becoming aware of it," said the official. "That thing has been tried before, but never with success. We do not credit the stories that we hear, nor do we apprehend any trouble with our employes."

Austin Corbin has money and he has the power which money confers, but he has neither enough money nor power to longenslave 35,000 workmen in this country, not even in Russified Pennsylvania. There is going to be a reaction, even in Pennsylvania. Corbin's ideas will not always prevail, and when the reaction comes it will sweep him away as when the floods rushed down the Conemaugh valley. The slave pen, the slave block and the slave lash are not going to be popular a great while in Pennsylvania. Even if Americans submit to degradation, the time will come when the Huns, Italians and Poles will revolt.

* *

We are advised by letter from Parsons, Kansas, that business is booming on the M., K. & T. Railroad. Under the superb management of Mr. Wm. O'Herin, there have recently been promotions of five firemen to road service as engineers, and six to switch engines, and all are doing good work. The relations of the firemen and engineers on the M., K. & T. with Mr. O'Herin are of the most amicable character, and as a consequence, business moves with the least possible amount of friction.

For the Magazine.

HUNTING DUCKS WITH DAVE.

Of all the joys of childhood
That in my memory dwell,
In deep and shady wildwood
Or fragrant, flowery dell,
Are some I fondly treasure,
But one I used to crave;
It was the thrilling pleasure
Of hunting ducks with Dave.

How well do I remember
Those happy autumn days,
As in the mild September
Or Indian summer's haze,
I plead beside my mother
Till finally she gave
Consent to go with brother—
Go hunting ducks with Dave.

And fondly now recalling
That simple, rustic joy,
When autumn leaves were falling
Around the barefoot boy,
I see the sunlight dancing
Upon each restless wave,
Just as I saw it glancing
When hunting ducks with Dave.

I see the pumpkins yellow
That specked adjacent fields,
The orchard with its mellow
And most delicious yields.
The finest Malden-blushes
That nature ever gave,
I ate down in the rushes,
When hunting ducks with Dave.

When not entirely hidden
In grasses tall and brown,
I, with these words, was bidden:
"See there! Get down, get down!"
Who would not, in submission,
Most willingly behave?
For I, with that condition,
Went hunting ducks with Dave.

With rapture all excited,
I scanned the evening sky,
Ecstatic and delighted
If I should chance to spy
Some Mallards in the distance,
And word I quickly gave,
So proud to give assistance
When hunting ducks with Dave.

And as they circled o'er us,
It thrilled me with delight
To hear their quacking chorus,
And see their green heads bright.
Keep still? 'Twas no use trying,
No, not myself to save;
I burst out wildly crying,
"Why don't you shoot them, Dave?"

But heeding not my calling,
He drew unerring aim,
And from the flock came falling
The choicest of the game,
And running out to get it,
A merry shout I gave;
I never can forget it,
My hunting ducks with Dave.

Where rushes tall were nodding
And bending o'er our boat,
I tore supplies of wadding
From the lining of my coat.
And thus, for ammunition,
My clothes I freely gave,
For I was all ambition
When hunting ducks with Dave.

So thus, while I am drinking
The sunshine of the past,
I feel a sense of shrinking
At every sighing blast;

Their mournful tones remind me,
While weeping o'er his grave,
Of pleasures that entwined me
When hunting ducks with Dave.

And though no weeping willow
May shade that silent clod,
He rests upon a pillow,
The bosom of his God;
And when in joy I meet him,
Where living waters lave,
I'll think when I shall greet him
Of hunting ducks with Dave.

—Geo. W. Hall.

STANBERRY, MO.

* *

J. S. CAPERS, chief dispatcher of the Louisville & Nashville railroad has invented an automatic electrical signal, which has been tested on the Pontchartrain road. The New Orleans *Times-Democrat* referring to the invention says: "This signal, which is said to be much quicker in its action than the present air whistle, consists of a bell and battery placed in the cab of the locomotive, with wires strung underneath the coaches, at each end of which connection is made by an automatic coupler. A circuit closer is placed in one end of each coach, to which a small bell-cord, extending from the circuit-closer to the other end of the coach, is fastened. When the conductor desires to convey a signal to the engineer, he merely touches the cord, which has the effect of closing the circuit, when the electric current, being instantly carried to the engine, sounds the bell. In equipping freight engines with this contrivance, for which it is principally intended, a bell is placed in both the engine and the caboose. Should the train part while in motion, the circuit is closed at each coupler where parted, which has the effect of sounding both bells simultaneously. The engineer and conductor are by these means promptly notified of the mishap, thereby saving delays and averting a probable smash-up." Such inventions are of great interest to train men, as they tend directly to the reduction of avoidable accidents to the minimum.

* *

MR. BENJAMIN NORTON, in August *Scribner*, makes the following statement of averages representing fairly what it costs to run a locomotive under ordinary conditions:

AVERAGES.

Number of miles run to pint of oil	15.32
Number of miles run to ton of coal	46.17
Number of pounds of coal per mile run	48.62
Number of pints of oil per mile run	0.06

COST IN CENTS PER MILE RUN.

For oil, tallow and waste	0.32
For fuel	7.42
For engineers	3.60
For firemen	1.79
For wipers and watchmen	1.25
For water supply	0.49
For supplies (miscellaneous)	0.10
For repairs	2.40

Total 17.37

AUSTIN CORBIN.

The President of the Reading Railroad may not know it, but it is a fact nevertheless, that he is to day recognized as a monster. It is said that

"Vice is a monster of so frightful mien,
As, to be hated, needs but to be seen."

It is not necessary to see Austin Corbin to entertain for him a healthy, vigorous loathing and contempt. This man Corbin has established already a national reputation for financial corruption and crookedness. His high ambition is to appropriate the property belonging to others; still he is not called a thief, nor a burglar, nor a foot-pad, but a "capitalist," a "banker," a "financier." Sometimes he is called a "pirate;" sometimes a "shark;" sometimes a "devil fish." He has traits of character which make such titles appropriate. No one calls him an honest man, that we know of; nobody regards him as a good man. He is, so far as we are advised, universally esteemed as a bad man; a mean man; a creature whose instincts are all vile, and it is because he is destitute of heart and soul that he is now making war upon labor organizations. The *Scranton* (Pa.) *Truth*, referring to Austin Corbin's boycott of labor organizations, says:

Austin Corbin's ukase, declaring that no member of a labor organization will be employed at his Reading works, is unworthy of a free country. There is no aristocracy in these United States, and there should not be any sort of tyranny, proscription or autocracy. So long as man's actions are not criminal he should not be restricted or discriminated against because of religion, politics or personal associations, and no check should be placed upon his lawful freedom. It may be argued for Mr. Corbin that he can employ whomsoever he pleases. Quite so, but he has no moral right to curtail the actions of freemen and make a petty little despot of himself in a land of liberty. The Constitution of the United States or the Constitution of Pennsylvania does not debar a man from belonging to labor societies, and Mr. Corbin should not consider himself greater than the organic law of the land. He has not been empowered to make a constitution of his own to abridge the rights of a considerable number of his fellow citizens, and we do not think his arbitrary action will be sustained by the courts. Labor organizations are recognized and chartered by the State. Their charter is just as good as that of the Reading Railroad, and so long as they are lawful Mr. Corbin cannot outlaw them. It is a great folly for men of Mr. Corbin's stamp to think that they can crush out labor organizations. Such organizations are bound to exist in some shape, and the more intelligent and high-minded their principles and direction the better it is for all concerned—employers as well as employed. If Austin Corbin had the power to crush the Knights of Labor to-day, he would find himself confronted with some other and probably less desirable form of labor organization to-morrow. It is a monstrous proposition to assume that men may not organize within lawful lines in this free land to improve their conditions in life or that some petty corporation president at the head of an organization, which owes its existence to the grace of the people, can use his power to crush out the manhood of American citizens. The controversy between capital and labor is not to be settled in that way

any more than it can be settled by the introduction of cheap labor into these busy fields. There is only one solution for that problem, and that is to be found in the exercise of fair play—a jewel, which, we are sorry to say, President Austin Corbin flung away when he declared that no member of a labor organization could find employment in the works of the Reading Company.

Austin Corbin begins to be understood in Pennsylvania, where he is Russianizing the anthracite coal regions—reducing working men to serfs, disrupting labor organizations and filling his mines with Huns, Dagoes and Poles. He surmises that he can accomplish the task of obliterating labor organization. His premises are all false and delusive, and this, in time, he will realize. Fire is to be opened upon him all along the line. It is to be one continuous bombardment. Labor organizations and publications in the interest of labor will ceaselessly attack him, and just when he thinks he has won a victory, he will be overwhelmed in defeat. The *Scranton Truth* presents him to its readers and exhibits his deformities; other Pennsylvania papers, of commanding ability, will gibbet him before the world. His degrading, anti-American policy will eventually be defeated. Men like Austin Corbin and John Livingstone will not be permitted to Russianize this country. The demand is to pour hot shot into Austin Corbin. He is rich. We care nothing for his money, but his malice and meanness deserve universal execration.

* *

THE American Federation of Labor Convention is to be held in Boston, and preparations on a large scale for the event have been made. The Boston Central Labor Union held a meeting in July, and F. K. Foster, of Typographical Union No. 13; A. W. Spurr, of the Brotherhood of Locomotive Firemen; John F. Sullivan, of the Horse Railroad Men's Organization; R. J. Stevens, of the Steam Fitters' Association; R. J. Anslow, of the Plasterers' Union; J. H. O'Neill, of the Pianoforte Makers' Union; H. C. Blaskovec, of the Cigar Makers' Union; W. P. Cherrington, of the Knights of Labor, and W. Davis, of the Steam Railroad Men's Protective Association, were appointed to make arrangements for the entertainment of the delegates to the federation. The *Magazine* heartily endorses the selection of A. W. Spurr as representative of the Brotherhood of Locomotive Firemen.

* *

THE Chicago, Burlington and Quincy Railroad Company has recently issued an order to all its conductors and engineers requiring them to use only the best non-magnetic watches. Geo. H. Daniels, of Creston, has been appointed watch inspector for the West Iowa division.

THE VICE GRAND MASTER'S COW.

In writing history there should be
A large per cent. of veracity—

And parenthetically, let me say,
The writer hereof is built that way.

So, without further ado, I make my bow,
And go to work on Hannahan's cow.

No, I think it the better plan
First to write of Hannahan.

And as I proceed, *nota bene*,
Will introduce Grand Master Sweeney.

For Sweeney, the cow, and Hannahan,
Constitute my historic clan.

And this poem I intend shall be
Their monument, epitaph, and eulogy.

Near an inter-ocean in Illinois
Is a city famed for bombs and boys

And this city is Chicago,
That stands on the banks of the Inter-o.

And near this city so famed for blood,
Nestles the village of Englewood.

And in this Englewood suburb
Lives V. Grand Hannahan, the superb.

Fortune smiled, the Lord knows how,
And our V. G. bought himself a cow.

Then you ought to have seen our V. G. laugh
When his old cow "came in" with a calf.

Then our V. G. M. was pleased and serene,
As he thought of butter, milk and cream;

Of buttered bread, fritters and slich—
Then he rubbed himself and said "I'm rich;

"I'll have cream for my coffee and milk for my
tea,"

And then he danced, hi diddle dee.

He'd talk of the stars by the hour, and say,
"Bye, don't you see my milky way?"

But our V. G.'s stable had no mow,
And there was no hay for our V. G.'s cow.

And thus it happened, slack, alas,
That our V. G.'s cow was hungry for grass,

Deprived of oats, of hay and corn,
She had no cud, and looked forlorn.

She got so weak as the days went by,
That to raise her tall to knock a fly

From off her back, her sides or rumps
Would exhaust her breath—give her the thumps.

'Twas enough to make a milkmaid shudder
To see her empty, flabby udder.

She could scarcely stand on her four feet
Because she had so little to eat.

She looked, for the world, between me and you,
As if she had scabbed on the C., B. & Q.,

Or had grown poor, and weak, and lean,
A victim of Corbin's insurance scheme.

Now, presto! there's a grand surprise
For that old cow's languishing eyes.

She sees on a line, just over there,
Grand Master Sweeney's underwear.

The old cow didn't know, nor did she care
Whether 'twas grass or camel's hair.

She knew she was hungry, had lost her cud,
So she took two horns and went for blud.

She'd eat the devil if he'd come out her way,
Just the same as Timothy Hay.

It was a tide in the old cow's affairs
That came upon her unawares.

And she took it like a cow who knew
She must pass in her checks if she didn't chew.

And being reduced to hide, hair and bones,
She had tried to feed on paving stones.

But looking around, she spied on a line
Something she thought would be good for kine—

Kine like Pharaoh saw in his dream,
Only just a little more haggard and lean.

She chewed all night, till the dawn of day,
On imported fodder from Canada.

She smuggled it down her capacious maw,
Caring nothing for the terrors of law.

She chewed and chewed, she chaws and chaws,
And down goes shirts and down goes drawers.

And finally, when the stock had disappeared,
Sweeney was wroth and Hannahan skeered.

But fortunately there was a compromise,
Entered into, about this wise:

Says Hannahan, "I've got it fine as silk;
We'll put up the cow and measure the milk."

"Ah," says Sweeney, "that will be nice;
You furnish the milk and I'll furnish the ice.

We'll then invest in a spanking team
And open a shop and sell ice cream."

Thus things appeared all hunkidory,
But, alas, it don't end this story.

The poor old cow was indiscreet,
And swallowed more underwear than she ought
to eat.

And in her stable, though she did her best,
Her camel hair fodder she couldn't digest.

So she lay down on the stable floor
And quietly left this mundane shore.

Then Hannahan said, "I'll sell her calf,
And buy a monument and epitaph.

"And I'll invite the bulls of the Board of Trade
To come down here with mattock and spade,

"To dig her grave, and Phil Armour's steers
Shall be chief mourners and shed the tears.

"In some dingly dell I'll dig her grave,
Where cow-slips bloom and milk-weeds wave,

"Where zephyrs sing and milkmaids stray
And bees make honey each sunny day.

"And Sweeney and me will make a vow
Now and then to 'wake' the old cow."

And this is history, as she should be writ,
True from the beginning to the end of it.

—Gibbon.

AUSTIN CORBIN DENOUNCED.

Early in July Austin Corbin, whose reputation is as spotted as a leopard's skin, and as sadly disfigured as if it had been washed in vitriol, issued the following notice:

OFFICE OF THE
PHILADELPHIA & READING RAILROAD CO.,
227 South Fourth Street,
PHILADELPHIA, July 6, 1889.

To the Former Employés of the Reading Iron Works:

The plant of the Reading Iron Works has been purchased in the interest of the Philadelphia & Reading Railroad Company. A new corporation will be organized to be known as the Reading Iron Company, and as soon as possible business will be commenced in all departments.

In employing men for the new company, preference will be given to the former employés of the old, but only on the following conditions:

1. No member of any labor organization (except such as are purely beneficial or benevolent) will be employed by the company; and every man engaging with the company must sign a written agreement that so long as he is in its employ he will not belong to such organization.

2. Sober, honest and industrious men only will be given employment. Any employé found under the influence of liquor, whether on or off duty, will be discharged.

3. The company will always give a patient hearing to any of its employés in relation to any matter affecting their interests, but it will under no circumstances recognize or treat with representatives or committees of any labor organization, or with any person not an employé of the company.

Persons willing to comply with these rules must call at the office of the company on or before July 23th and agree in writing, if employed, to accept the conditions named herein. Blanks will be furnished at the office.

AUSTIN CORBIN, President.

It will be observed that Corbin has resolved to boycott all labor organizations. He has resolved to Russinize Pennsylvania and the foregoing notice is conclusive upon that subject.

On the evening of the 18th of July, as reported by the *Herald*, a Reading, Pa., paper, there was a large meeting, in Reading, of the Trade and Labor Council, at which Corbin received special attention. The *Herald* says:

The recent order of President Corbin with reference to the employment of hands at the Reading Iron Works was also taken up and vigorously denounced. The sense of the Council on the subject found expression in the following preamble and resolutions, which were unanimously adopted:

WHEREAS, Austin Corbin, President of the Philadelphia and Reading Railroad Company, in his recent orders concerning the proposed resumption of work at the Reading Iron Works, has dealt another blow at organized labor, by stating that only workmen who do not belong to labor organizations will find employment, and in so doing he intends to totally ignore the hard-working, noble-hearted men who always worked faithfully to attend to the wants of those depending upon them and looking to them for support, and who, for causes well known to all of us, joined various labor organizations and movements to protect themselves and improve their condition; and

WHEREAS, The said Austin Corbin, by his orders, raises the fearful lash of slaveryism once more before our eyes, ready to destroy our fondest hopes, ready to see us at his feet and crouch

before him in an attitude unbecoming free born Americans; and

WHEREAS, In looking over the past history of the Reading railroad company we can plainly see that all the trouble which was raging, and bloodshed, some twelve or fourteen years ago among the miners throughout the valley, was originated and caused by the Reading railroad officials themselves; and

WHEREAS, If the mills or the Reading Iron Works resume operations with a supply of unskilled and non-union workers, it means also low wages and starvation, and similar action on the part of others who are opposed to the man who endeavors to protect himself and dares them to harm his family and little ones; and

WHEREAS, All shame has fled from Austin Corbin and all feeling for his fellowmen has departed from him, we, as honest and upright workmen, no matter of what organization, will turn our looks from him and blush for him if he cannot; and

WHEREAS, Vice-President McLeod, in a reply letter to Grand Master F. P. Sargent, of the Brotherhood of Locomotive Firemen, of Terre Haute, Ind., stated "That in view of the action taken by labor organizations during the last few years, he considered the Firemen's Brotherhood an organization which would in an emergency undertake to enforce its views upon a corporation by compelling its members as a body, regardless of their individual interest and wishes, to abandon their duties without notice and leave their employers and the public's business to its fate," etc. We would state that it is a base fabrication and deserving of no notice whatever, and would only remind him that one of many instances—the great railroad strike in this city in the '70s—proved conclusively who protected their workshops at night from destruction by the mob. In view of all this, be it earnestly

Resolved, That the Trade and Labor Council in meeting assembled to the man, severely condemn the action of Austin Corbin in endeavoring to break up the labor organizations.

Resolved, That we pledge our honor as men, not to submit to those detestable conditions as set forth in his recent circulars.

Resolved, That the time is fast approaching when labor must be victorious and that we will always be true to our obligations, and rather than earn a few pressed-out shekels by committing perjury, we will seek employment elsewhere.

Resolved, That we ask every organized workman to stand up for his labor organization, show himself to be a man in reality, as he was supposed to be before this occurrence.

Resolved, That Vice-President McLeod, of the P. & R. railroad, shall also be severely censured for his reply to Grand Master Sargent, a reply which cannot bear an argument.

Resolved, That each delegate represented in this Council bring this matter before his union to take separate action thereon, as it concerns every workman throughout this part of the state.

Resolved, That the various K. of L. Assemblies be asked to adopt similar resolutions, if they have not already done so.

Resolved, That we consider it a breaking of their charter to control the mining of coal and the manufacture of iron; and further

Resolved, That all publications are hereby requested to copy these preambles and resolutions, verbatim, thus helping us in our just cause.

It affords us undisguised satisfaction to publish the foregoing preambles and resolutions. They come from Reading, Pa., and demonstrate that the workmen of Pennsylvania are not all slaves; that they will not wear Corbin's yoke or collar; that they will not crawl at his bidding; that they will not lick his boots, nor tamely submit to his whip. All hail, ye living men of Reading.

You are not dead. You have not surrendered your manhood, and there is redeeming power in your utterances. The *Firemen's Magazine* congratulates the Trade and Labor Council of Reading. The time has come for working men to speak the same words of loathing of such monsters as Austin Corbin, and of defiance of his Russianizing policy.

FRATERNAL.

The growth of the fraternal spirit in the ranks of workmen, is one of the cheerful and satisfactory signs of the times. It overleaps national boundaries, and in its conquering emprise, oceans do not check its onward course. In this connection, it affords us unusual satisfaction to introduce the following fraternal communication from Leeds, England:

ASSOCIATED SOCIETY OF LOCOMOTIVE ENGINEERS AND FIREMEN.

HEAD OFFICE: 44 PARK SQUARE,
LEEDS, ENGLAND, July 11, 1889.

GENTLEMEN:—Having read and heard much of your noble Order, and the grand work in which you are engaged, and how by your untiring efforts the condition of the members of your association has been considerably enhanced, it was unanimously decided at a recent meeting of our Executive Council that the Grand Officers of the Brotherhood of Locomotive Firemen be asked to allow themselves to be enrolled as members of our Order, which has for its object the moral, social and intellectual advancement of the engineers and firemen of the United Kingdom, and should this humble token of the esteem in which you are held by us meet with your approval, we shall have great pleasure in forwarding to each of the Grand Officers of your Order, an emblem of our Society; and as the names with which we are more intimately acquainted are those of Messrs. Sargent and Debs, will you kindly supply us with the names and initials of officers of the whole of your staff, and oblige,

Yours respectfully,
THOMAS G. SAUTER, General Secretary,
THOMAS BALL, Assistant Secretary.

It is scarcely necessary to say that the Grand Officers of the Brotherhood of Locomotive Firemen have accepted the compliment so gracefully offered by the ASSOCIATED SOCIETY OF LOCOMOTIVE ENGINEERS AND FIREMEN of England, which speaks so eloquently of the brotherly spirit abroad in the world. This *Magazine* sends fraternal greetings to the officers and members of the Society of Locomotive Engineers and Firemen of England, assuring them that the Grand Officers of the Brotherhood of Locomotive Firemen appreciate the honor which membership in their Society confers, and accept it as a token of friendship and fellowship of inestimable value. We assure our brethren beyond the Atlantic that the Brotherhood of Locomotive Firemen is animated by a noble purpose to improve the condition of its members and the railway service of the country, and that it is confronted by no obstacles calculated to dampen the ardor of its members in their onward and upward march.

JAMES G. BLAINE, JR., IN THE CAB.

The New York *World* publishes the following special from Bangor, Maine, of July 23:

It was only a few months ago that James G. Blaine, Jr., won considerable notoriety by entering the Maine Central railroad's machine shops at Waterville to go under the immediate instruction of the most skilled mechanics in the employ of that great corporation. He has evidently mastered the business in its every detail, for yesterday the young man made an entirely new departure in railroading by entering the cab of a locomotive and commencing to "fire." He has been given a position on the fast express train between Bangor and Bar Harbor and arrived here on his first trip at 1:20 P. M., leaving again for the famous Maine summer resort, where his father is luxuriously resting, at 3:30. He is running with Engineer Thomas Maney, one of the youngest Maine Central drivers. There is another fireman in the cab, for it is a difficult job.

The mercury yesterday was away up among the nineties when young Blaine made his appearance on the engine. He was dressed in the ordinary coarse blue drilled overalls and jumper of a railroad fireman. His face had been changed by black coal dust and perspiration until his countenance was hardly recognizable. His hands were black and blistered, but he was sticking manfully to his task, and everyone around the depot was crowding to the forward end of the train to get a glimpse of him. If his promotion as rapid here as at the machine shops, he will doubtless next be heard from as the controlling spirit of the throttle of some Maine Central locomotive.

It has been said that the best sea captains come up from the fore-castle. It is possible that James G. Blaine, Jr., proposes to make himself master of every department of railroading. If this is the case, he is now pursuing a wise course, and when he becomes General Superintendent, or President, he will be in a position to have a fellow feeling for men who make things go on the track. We wish him a brilliant and prosperous career.

* *

THE *Railway Age* tells of a new locomotive which is claimed will revolutionize railroading. This new machine is to have two boilers, one above the other, and engine and tender are to be encased in a shell of thin iron, tapering off to a point in front, the whole machine being seventy-five feet long and weighing in working order ninety-one and a half tons. Thus it would be heavier than the heaviest European locomotive yet turned out. It is to have two pairs of cylinders fifteen and three-fourths by nineteen and a half inches and four coupled driving wheels nine feet nine and a half inches in diameter, or more than twice the size of our large passenger engine drivers. Great power and great speed are both claimed for this novel combination of parts and proportions, the ordinary gait being modestly placed at seventy-five miles an hour, but this being capable of increase to ninety-two miles per hour. This engine has been patented in France by a Hungarian engineer named M. Ala Besthy.

THE READING ORGANIZATIONS.

Austin Corbin, Esq., President of the Reading "Devil-fish" is reaping what he has sown. His arbitrary and high handed methods of suppressing labor organizations are bringing him into well merited disrepute. All honorable men hold him in sovereign contempt, and all newspapers not hostile to the interests of labor, are putting him on the rack. One of the most scathing arraignments we have yet seen appeared in the *American Machinist* of August 1st; a paper so widely and favorably known as to give special weight to its utterances. We commend the article to the thoughtful consideration of our readers:

Of course no one doubts that the president of the Reading Railroad system, Mr. Austin Corbin, believes in organization among men who, having the same objects in view, are able by means of their organizations to attain that object more easily, or in a more perfect manner than would be possible without organization.

The prominent part which Mr. Corbin has taken, and is taking, in various organizations, is proof that he thoroughly believes in them as a means of making money, which seems to be the sole aim of Mr. Corbin's life.

What more natural, or more to be expected, than that the workmen employed by the various organizations to which Mr. Corbin belongs should, seeing his remarkable success with them, desire to try the plan for themselves? They conclude to do so, but have no sooner got fairly started than it is made apparent that Mr. Corbin does not believe in all organizations, and is strenuously opposed to allowing indiscriminate organization among men by whomsoever may happen to think that their particular interests may be conserved thereby; evidently believing that this matter of organization is a thing which can be carried too far—at least in certain directions—that there is need of some restraint—some control over the business of forming organizations, and, moreover, that he, Mr. Austin Corbin, is the very man to decide what particular organizations are improper, and to suppress them. He accordingly informs the American citizens, or, in other words, the "uncrowned kings" who labor in the employ of his organizations, selected the Reading Railroad, the Reading Coal & Iron Co., the Reading Iron Works, etc., that henceforth he himself, Mr. Austin Corbin, will attend to all the organizing, and that it is their particular business to attend strictly to their work, and accept without a murmur the compensation accorded upon by Mr. Corbin and his fellow organizers as being the proper amount, and that employment can only be secured or retained upon condition of renouncing membership in all organizations not approved of by him.

Of course, no one who has paid the least attention to the course pursued by the organizations which Mr. Corbin has endorsed, and which are managed by him, will for one moment entertain the idea that his opposition to a given organization may be founded upon apprehension that it may become a law-breaker; may engage in dishonest or dishonorable practices; may, by the use of money, corrupt legislature, and secure the passage of laws detrimental to the interests of society; may corrupt the courts, and thereby practically annul laws duly enacted by the representatives of the people in their interest, or may be so managed as to enable its officers to defraud and rob the ordinary lay members. Instances are plentiful which go to prove that such things meet with the entire approval of Mr. Corbin, when they are managed by organizations which he controls, and result in turning money into his pockets.

The report of a Committee of Congress, which we have before alluded to, and the testimony contained therein, though we have no idea that it exposes all the rascality which Mr. Corbin has perpetrated by means of his organizations, exposes so much of it that one would think that, if he were not entirely lost to the sense of shame, and absolutely reckless of the opinions of his fellow men, as well as of the security and peace of society, he would subside and endeavor to attract as little attention as possible. But the trouble with Mr. Corbin, and men of his class, seems to be that they think they can afford to despise, and ride rough-shod over society and its laws, if only they make sufficient money by so doing; imagining, apparently, that if worse comes to worst, an society should determine to rid itself of their tribe at any cost, the Government will step in and protect them from harm, forgetting that the Government derives its power and authority from the people, and that, when a sufficient number of them untiedly determine to do a thing they will do it, their right to do so being clearly recognized and declared in the preamble to the Declaration of Independence, which was and is the real foundation of our Government.

We do not wish to appear in the role of alarmists, but we sincerely believe that a way must be found to suppress the tribe of Corbin. We hope and believe that a peaceable and lawful method of doing so will be discovered; but in the meantime they are a greater danger to society than all the common thieves and thugs in the country, and if there is but one good reason in the world why men should organize with the object of securing what they desire, it is to be found in the fact that Austin Corbin is opposed to it.

**

THE *Brakemen's Journal* for August has the following with reference to Wheaton's secret circular:

The most detestable and cowardly manner of assault against the character or reputation of another is the secret circular, which is calculated to instill a poison or inflict a wound, with no danger to the author and no chance for escape for the victim. The secret circular does not always remain secret, however, and frequently acts as a boomerang, as has been the case with C. O. Wheaton, John Livingstone, and others. The first named "edits" a secret circular when he is afraid to declare himself in the organ of the order he controls, and then bewails the fact that members of the Order "give the whole snap away," and he threatens dire vengeance when he discovers who exposed him. The secret circular, when used as a cloak, is never productive of good results, and when exposed, as sometimes happens, brings the author into disrepute and well-merited contempt.

**

IN Missouri, the Railroad Commission, listened to a charge made by one McGrew, a coal miner of Lexington, that the Missouri Pacific charged an unlawful and exorbitant rate for hauling coal to Kansas City, held the complaint to be good, and ordered that 55 cents should be the maximum rate for any haul up to and including fifty-five miles. The commission also ruled that it was unlawful for a railroad company to engage in mining for commercial purposes, such action being forbidden by the Constitution of Missouri. That's the kind of a commission the State of Pennsylvania needs, to check the Russianizing schemes of Corbin and his pals.

MASTER MECHANICS' ASSOCIATION.

The Association of American Railway Master Mechanics has been, we infer, in existence for twenty-two years. Necessarily the work and investigations relate chiefly to the locomotive engine, and these investigations are of a character which invite the attention of every locomotive fireman in the country, and this will be seen by reading the following official circular, which defines the work of the various committees named for the current year:

AMERICAN RAILWAY MASTER MECHANICS' ASSOCIATION.

R. H. BRIGGS, President. ANGUS SINCLAIR, Secretary.

OFFICE OF THE SECRETARY,
140 NASSAU ST.,
NEW YORK, July 20th, 1889. }

Below is a list of the Committees appointed by President Briggs to carry on the work of investigation and other business during the year. The name first mentioned is chairman of each committee. One Associate Member has been placed upon each committee, and it is expected that these will use their efforts to obtain scientific data and to furnish information that may be obtained outside of railroad sources. The chairmen of the various committees are urged to organize the work to be done by the different members and begin the investigations assigned to them as early as possible, that valuable reports may be prepared in good season for the next convention. The work of the XXII Convention was greatly facilitated by most of the reports being delivered early.

For the Executive Committee,
Angus Sinclair, Sec.

COMMITTEES.

1. "Exhaust pipes, nozzles and steam passages; best form and size in proportion to cylinders." Committee—T. F. Thomas, A. W. Gibbs, Ross Kells, John A. Hill.
2. "Compound locomotives; their efficiency as compared with simple engines." Committee—J. Davis Barnett, John Player, H. D. Garrett, F. W. Dean.
3. "Testing laboratories, chemical and mechanical." Committee—Philip Wallis, George Gibbs, G. W. West, D. L. Barnes.
4. "Efficiency of the link, as compared with other valve motions." Committee—James M. Boon, David Clark, H. Tandy, John A. Coleman.
5. "Advantages and disadvantages of placing the fire-box above the frames." Committee—Fred B. Griffith, James Macbeth, W. A. Foster, L. F. Lyne.
6. "Relative value of steel and iron axles." Committee—John McKenzie, J. S. Graham, John S. Cook, Thomas Shaw.
7. "Brick arches in locomotive fire-boxes." Committee—T. W. Gentry, Allen Cooke, L. C. Noble, W. A. Smith.
8. "The best means, and the economy of preserving locomotive tanks from corrosion." Committee—W. J. Robertson, Albert Griggs, O. Stewart, Jerome Wheelock.
9. "Purification or softening of feed water." Committee—W. T. Small, Harvey Middleton, A. Quackenbush, John W. Hill.
10. "The best form and size of axles for heavy tenders." Committee—W. Swanson, W. Garstang, James Maglenn, L. R. Pomroy.
11. "The present status of the 'automatic car coupler question,' and whether this Association can endorse the action of the M. C. B. Association in recommending the vertical plane type as a standard, from a mechanical standpoint." Committee—John Hickey, G. W. Rhodes, Sanford Keeler, M. N. Forney.

It is to be hoped, when the various com-

mittees make their report, that there will be an earnest desire on the part of members of the B. of L. F. to obtain them for educational purposes.

J. E. PHELAN.

Mr. J. E. Phelan, Master Mechanic of the Northern Pacific at Mandan, Dak., who is an occasional correspondent of the *National Car and Locomotive Builder*, has been writing a series of articles for the *Locomotive Engineer* on "Air Brake Practice," and they are about to be published in book form. Mr. Phelan was for several years travelling engineer of the Northern Pacific, when part of his work was to instruct trainmen on the brake. He mastered the subject thoroughly, and anything about air-brakes which he has not told is scarcely worth knowing. Besides being an expert on brakes, Mr. Phelan is a polished, graceful writer, and has the capability of explaining mechanical appliances in a clear fashion that is intelligible to minds not trained in the reading of mechanical description.

National Car and Locomotive Builder.

Honors were never more worthily bestowed. Mr. Phelan, is all the *National Car and Locomotive Builder* says he is, and more too. Besides being an accomplished Master Mechanic, authority on the air brake and a writer who makes his words the signs of his ideas, Mr. Phelan is noble and generous by nature, a fact, that many an unfortunate fireman and engineer, has cause to know, and remember. When his book is out, the *Magazine* will do what it can to make its sale, in some measure, commensurate with its merits.

* *

The Age of Steel in a recent issue, says:

"It is patent that a general movement to reduce wages is starting, and it is difficult to tell where it will stop, in the iron and steel industries."

It is just as difficult to tell where it will stop in other industries unless the workmen are aroused to a sense of their insecurity and continue the work of organization. This is not the time to quibble as to which organization you shall join but to decide whether you will join any. Workmen organize and prepare to defend yourselves against organized capital.—*Chicago Knights of Labor.*

Organization is the watch word, and there is no mistake about it, and workmen ought not to forget it, nor is organization enough. There must be federation—the brotherhood of man. This done, the world will comprehend the "Fatherhood of God" and not till then.

* *

The Railway Conductor for August comes to us looking as fresh as a daisy, with a new cover. The title page is neatly engraved, and for a central embellishment has the picture of a lantern, the conductor's companion when night's curtains are down. Editor Belknap has many kind words to say of contemporaries, and displays a desire to be at peace with the world and the "rest of mankind"—than which nothing is more commendable.

THE ANNUAL PRESENT FRAUD.

The *Locomotive Engineer*, in a recent issue, under the caption of "The Annual Present Fraud," prints the following well timed and pungent remarks:

Last month we offered a little advice to, and mildly remonstrated with the rank and file of railroad men for imposing upon people, and now we want to belabor them again for being imposed upon.

How many of you pay out from \$1 to \$10 per year for presents to some one—generally far better able to buy presents than you are? A good many, we will warrant. How many gold watches, silver sets, etc., have your superintendents, master mechanics and other officers got at your hands? How many have you got at theirs?

When an official leaves the service who has been a particularly fair and just man in his dealings with the men under his orders, we have no objection to seeing him receive some substantial reminder of the esteem the men have for his management; but the idea of making Christmas, or any other presents to officers in the service, should be frowned down by the men and killed entirely by the officials themselves.

There are not only too many men willing to start such lists, but there are altogether too many foremen and master mechanics about our shops that encourage and aid in such work. The next time there is a list stuck under your nose, asking you to contribute to the purchase of a watch or a diamond stud for some official who gets about four times as much pay as you do, just say to the lister that you don't believe in "standing in" in that way, and won't give a cent; when a list is passed for some unfortunate co-employee or his family, don't plead poverty, but invest your present money in charity—it will return to you after many days—the present never will. This present business goes to extremes sometimes; we recently dropped into a roundhouse with an engineer just getting in off a night run, and the night foreman flashed a list on him—it was to purchase a suit of clothes for a certain minister in the village and was headed by the master mechanic for \$5 and the foreman for \$1—this was bait for the men.

Our engineer read the foreman a lecture, said that the M. M. was the only employee of the company who belonged to that particular church, and told him to tell the M. M. in the morning, that if the list was passed among the men he should go to the general manager about it. This engineer had considerable moral courage, and told us afterward that he intended to break up that present business; the pay card seldom passing without a case coming up—he called it "the invisible blackmail."

Subscription lists for charity are noble monuments of man's humanity. Subscription lists for presents for officials in office are humiliating evidences of man's degradation and weakness.

Put your shoulder behind the one, and your foot upon the other.

There is profound philosophy in the foregoing phillippic, and those who have been passing around the "lists," and those who have been paying and those who have been accepting, should call a halt—should "down-brakes." As a general proposition, there is no heart in the business, for it is as the *Locomotive Engineer* puts it, a "humiliating evidence of man's degradation and weakness." The men who subscribe and pay, have a lurking belief that the man who accepts the present will favor him in some way to the exclusion of the man who had the courage to refuse. Let the whole business be remanded to the limbo of things discreditable.

GEO. W. HALL.

It affords us real pleasure to place at the head of this paragraph the name of a young man, who has from time to time, contributed meritorious poems to the columns of the *Magazine*. Mr. Hall, like the great majority of poets, is poor in this world's goods and chattels, but is full of noble ambitions, and proposes from this time forward to bend all his energies to secure a thorough education. To accomplish this, Banner Lodge, No. 56, B. of L. F. suggests that Mr. Hall write two or three appropriate poems, have them printed, and offer them to the members of the B. of L. F. and the B. of R. B. The suggestion is practical, and we do not doubt will meet with a hearty response. Should the movement result favorably, as we hope it will, the classical education which Mr. Hall will secure, will indefinitely aid him in his literary work, and the Brotherhoods which take an interest in him may expect to be amply rewarded by his contributions to their organs. By all means let the poems be written.

* *

The *Philadelphia Record* in a recent issue says:

The Leaders of the Knights of Labor have just decided two important questions which will have an important bearing upon the future of the Order. They have declared a war on the Reading Railroad Company which will probably be the bitterest of the many struggles between that corporation and labor organizations, and they have decided to abandon Philadelphia as a fixed headquarters for the Executive Board. In future the Board will assemble at different times in different cities. Both of these moves are confidently expected to impart a new strength to the Knights where dissolving influences have been at work.

Nothing could be more natural than that the Knights of Labor should attack the Reading Railroad Company, and it will have the aid and sympathy of every labor organization in the land. We do not regard it possible that Austin Corbin, and his miserable gang of cut-throats, can for any considerable length of time Russianize any portion of Pennsylvania. The infamies practiced by the Reading Company, must, in the nature of things be short lived.

* *

The *Switchmen's Journal* for August in closing an excellent article on "Federation an Accomplished Fact," says:

"Thus it will be seen that federation has been accomplished. All our backs must be turned to the past, with its mistakes, irritations and unpleasantnesses, and our faces to the future, with its hopes and expectations. We are all brothers now, each individual intrusted with a part to perform in the great events that make up our history."

* *

Pittsburg Chronicle:—Without consulting the market reports, one would naturally expect "refined" sugar to be "quiet and steady."

THE BROTHERHOOD.

SEPTEMBER, 1889.

The Labor Problem.

MR. EDITOR:—For the last few months my time has been less employed in "actual service" and it is natural for us who are always at work, to look for "something to read" when we are "in for repairs," "taking leave of absence" or "suffering a suspension."

With us, the labor problem is the one great thought and something to read must necessarily contain ideas on that subject.

I have read of late the *Locomotive Engineer*, the *Firemen's Magazine*, the *Engineers' Journal* and various articles, by writers who think their solution of the labor problem is correct.

Nearly all the arguments are in favor of Federation. Why have we been so slow in federating is the great question in my mind. How long are we going to try the old conservative way of settling the question of *fair pay for good work*? Are we going to allow capital to grind us in the dust then wait for the good Samaritan to come to heal our wounds?

What earthly good is it accomplishing for investigating committees like the one on the Reading road? They make their report against the company. What then? No action is taken by the authorities or no new laws to correct the evils. Capital has full sway. Where are our rights? torn and trampled on: but we must endure all these in a free land like ours.

Capital knows no good Samaritan way of treating employes. If we don't know the price to put on our labor, who in the name of heaven does? How well we know the cost of living in our different localities. Who is there among us that when the age of decrepitude arrives don't anticipate a fair competence saved from our labor to sustain us in our declining years? How are we to get this but with our labor?

The mistakes of capital are few. The majority of failures reported are schemes to increase somebody's wealth. To dispose of our labor for less than a *per cent.* above our living, would be contrary to all business principles and mean ruin to ourselves and our families.

The great cry of corporations to "reduce expenses" is made to help pay for some great improvement in their equipment or an extension of their lines. But, we must submit to a reduction and pinch ourselves in the necessities of life, so the great corporations can satisfy their greed.

Where is our saving for old age to come from if we work our young days of usefulness for a living? There is no pension for our support in days of adversity and they come to every one in

a lifetime. We must by frugality save our little fortune, for indeed it will be small enough and we do the best we possibly can. We have no time for dissensions in our different orders. We must put ourselves to work immediately and see who can do the most towards solving the difficult question. Contentions, strifes and dissatisfaction must be unknown in our ranks. What good advice did T. V. Powderly give his knights when he told them not to pit themselves against other labor orders.

I don't doubt but it was a knife driven to his heart to see members of orders, who profess to do better, take the places of his knights who were in the manly struggle.

The two greatest words in the laborers' vocabulary to-day are federation and arbitration. How much we shall have advanced when we can think of one another as a "brother" looking for work no matter what position we are in ourselves. Then we shall be nearer the millennium. When we are in search of employment who is there of us that does not grasp after straws, no matter who offers the straw? Then in the days of prosperity of employment why not try and ameliorate one another's condition? Be ready to assist all worthy brothers of the different orders. I am inclined to think the bigots in our different orders are those who never have "rustled" a job, been sick away from home and felt in their purses only to know the shekels were few. I can't think all the writings I read are from those who are the best workers for federation or the best employes generally. The vast army of capitalists is advancing. Look well to our fortifications. Some orders are accused of fostering ill feeling toward others and having objectionable clauses in their constitution. Now brothers, I know as our objects are the same there should be no ill feeling and for any to exist, is suicidal. Do not be too hasty in your accusations. Improvements are to be made when needed and mistakes corrected when known to exist. I can take up the different official periodicals and in nearly every instance can tell just the difference in the beat of the pulse. I can diagnose the case exactly where there is any ill feeling existing. A great portion of it is imaginary, not real. I have worked in Massachusetts, Connecticut, Pennsylvania, Ohio, Nebraska, Kansas, Louisiana, Texas and Oregon in the last eighteen years. I have the experience to speak from. Now I served more than five years in apprenticeship before I got an advance and that advance was in name only, it was no advance in salary, but I had twice the responsibility. I have looked for work and been flying lighter than a canary too and how I'd like to have met some one with a liberal idea to advance. Even some in my own order looked at me in suspicion. It made me wonder if they thought I was after their job. I hope to see some good work done at the different conventions this year. If we all displayed the zeal in our older orders that the new one scarcely a

year old is starting off with, we might expect the millenium near at hand.

The hand of fellowship is extended to the B. of R. C. by all the protective orders. Come on, we need you. The ballot is spoken of by some as the only way to settle the great question of labor. Send men who will legislate for the laboring man. Show us some of them. They are the laboring man's best friend before election. After election—tableau. Let us advance, make progress with the times. Let us federate and that right away. Give us federation or give us \$1.00 per day.

A. F. K.

LA GRANDE, OREGON.

HARRISBURG, PA., July 21, 1889.

MR. EDITOR:—I am always anxious to find items in the *Magazine* relating to the standing of Harrisburg Lodge, No. 174, as we have a fine Lodge, and I am also pleased when Diamond Valley Lodge, No. 393 is mentioned. Both Lodges have an excellent membership and are doing good work for the Brotherhood. The membership of 174 is large enough to organize another Lodge, and in the near future a new Lodge may unfurl its banner, which will give us another delegate in the biennial convention, besides it will be an honor to the B. of L. F.

I am proud of the B. of L. F., for I am one of the boys myself, with my whole heart, not only by talk in the Lodge room, but out on the road. I joined the B. of L. F. when a fireman and shall remain one. My promotion does not elevate me enough to go into the "charmed circle," as the B. of L. E. call themselves. The best "charmed circle" I can find is the B. of L. F. It would be no honor to me to join the B. of L. E.—no, no, and any member that would leave the B. of L. F. to join the B. of L. E. has neither principle nor manhood, and the action of the last convention of the B. of L. E., as explained in our *Magazine*, is sufficient to convince any member of the B. of L. F. that the B. of L. E. is no place for him.

I like the plan of federation as I see it explained in the *Magazine* this month. It is a grand thing. It is the best way for all, but as the B. of L. E. don't want any of it, let them go. If they do not want us, we do not want them. We have treated them as gentlemen in every time of need, and have been brotherly with them, especially in the last strike. They cannot appreciate our friendship and fidelity. Now, I say, let them fight their own way. We have the members of the B. of R. B. and S. M. A. A. to march with us under the banner of federation. They are men of principle and honor, and they have shown it. It seems to me, as I read the *Magazine*, there is more brotherly love in the west than there is here, in this way: when a fireman is promoted here in the east, especially on the P. R. R., and desires to join the B. of L. E., he is not received cordially by the B. of L. E. simply because he stays just where he belongs. I say he belongs in the B. of L. F. because he was

raised there, and I, for my part, think there is more honor in a man who stays than there is in the man who joins the "Great I Ams." I am a B. of L. F. man and a "grabber" as they call us, but it does not hurt me. I do not think as do some of the B. of L. E. men, that I am above the brother on the "left side;" no, no. He is as good as I am in every respect as long as he conducts himself right as a man. It is not the big money or the good clothes that make the man, but rather his good principles. I want to say to the members of the B. of L. F. to stand by their Brotherhood, and to stand by the *Magazine* that is fighting the battles of the Brotherhood, stating facts and arguments showing that the B. of L. F. is right. Some try to make me believe if firemen stand up for their Brotherhood, that engineers will be down on them. There might be some instances of that character, but engineers that came from the "left side" and have not forgotten that they were once firemen, will treat firemen honorably. I would say to members of the B. of L. F., don't pay any attention to that class of engineers who swell up and think themselves superior. In good time, if firemen stick to their Brotherhood, such engineers will find their level.

I don't have to be told that efforts are being made to break up labor organizations. Corporations don't like them, and this is what railroad workmen see, and they see they must federate to maintain their hold, and in due time I believe federation will be adopted by all organizations of railroad employes.

I hope that some of the intelligent members of 174 and 393 will have something to say through the columns of the *Magazine*, and discuss the various questions of interest to the Brotherhood. As for the new name, I think the present name is good enough, but if it must be changed let it be called "The Brotherhood of the Footboard." That will bring us all in right, the firemen, the hostlers and the engineers.

The Brotherhood is doubtless losing some few members, but their going is no injury. The Brotherhood is better off with such men out of it, for in it they are an injury to the cause. They lack manhood and principle. I have been asked time and again why I did not join the B. of L. E. I would not join an order in which I could not be a free man in a free country. There is freedom in the B. of L. F. and I shall not withdraw as long as I can pay dues and assessments.

I said to a B. of L. F. man after the C. B. & Q. strike was over, if ever the firemen helped the B. of L. E. again I would withdraw from the order. That lesson was enough for me. I have heard some of the boys say that the *Magazine* was too plain. I don't think so. It was plain enough when the B. of L. E. said that no member of the B. of L. F. could belong to their order. It was an insult to every honorable member of the B. of L. F. Brothers, I think I am right. Hoping that the boys will all stay with the ship, I am,

Fraternally yours,

S. D. V. Puller.

A DREAM.

Alone—and the hour is midnight, I restlessly lay
on my bed,
A dull, cold numbness at my heart, a throbbing
pain in my head;
I thought of the world and its human freight as
I lay till the hour was one,
And said of all the thousands here, is there none
I can call my own?

Then I thought of a form I loved so well and
sweet letters the mail did bring,
And I wished I only owned a realm, so I could
crown him my king;
And I thought how I loved his manly form, with
a love devotedly deep,
While thinking thus of the absent one—uncon-
scious—I fell asleep.

But even in my slumber then that dear one was
with me there,
For I dreamed I pressed his lips to mine, and
gently smoothed his hair;
I drew his head so softly down until it lay on my
breast,
And I thought how sweet to be standing there,
holding my dear one to rest.

I saw his eyes, filled with tender love, upon my
face did beam,
As I turned again to kiss his brow, I awoke—it
was but a dream.
And I wished from that dream I had never
awoke to my lonely life again,
For the thrill of those loving, tender lips had
banished all my pain.

Some day, perhaps, in the great beyond, when
the shadows forever have flown,
I shall hold that head on my breast again, and
call him my loved, my own;
I shall clasp my arms around his neck in a fairer
world than this,
And feel, as I did in that beautiful dream, the
thrill of his loving kiss.

There are others, perhaps, who are claiming him
now, who daily his face can see,
Perhaps at this moment are kissing his brow,
but no one can love him like me;
For their perchance are false and fair and only
playing a part,
While I have given him that priceless thing, the
love of a woman's heart.

And though he may ruthlessly throw it away, or
tear it into a shred,
It will return with double force to haunt him
when I am dead.
Farewell my loved one, and if we meet, though
years may intervene,
I shall think of that happy, happy hour when I
kissed you in my dream.

—J. S. J.

A Brotherhood Hero.

PITTSBURGH, PENN., July 1, 1889.

MR. EDITOR:—During the night and morning
preceding the flood at Johnstown and vicinity,
a long continuous and heavy rainfall prevailed,
causing several small washouts and landslides
on the west slope of the mountain. Conemaugh
is situated at the foot of this side of the moun-
tain and is the home of quite a number of rail-
way men, all helpers for trains going up the
mountain, lying over at this point as well as a
few local freight crews. So much for explana-
tion. Engineer John C. Hess, formerly a mem-
ber of 225 but now Receiver of J. W. Walker
Lodge, No. 381, was sent up the mountain with

the work train to get, if possible, a track
open for passenger trains. They had gone but a
mile or mile and a half, when the first trouble
was encountered in the shape of a small wash-
out. While examining this, the roar of the
water from the burst dam was heard, as it came
dashing down the narrow mountain valley, and
realizing in a moment the full extent of the
threatening danger, Engineer Hess did not lose
his head or simply run for the high mountain
of which they were alongside of. O! no. He
had a family and friends at Conemaugh, and to
get warning to them was his first and only
thought. To start for Conemaugh as fast as he
could go and at the same time to tie a knot in
the whistle rope so as to keep it wide open,
thereby giving warning as he came flying ahead
of the water, was the work of but a few seconds.
By this simple, yet courageous act, and display
of good judgment many lives were saved. How
many no one knows. Both banks of the river
were lined with people watching the already
high water. These people raised the alarm and
ran for their lives as soon as they heard the
whistle, and in many cases not a moment too
soon, as the water was up to the knees of many
before they could get up high enough to be out
of danger. John C. Hess is a perfect gentleman
in every respect, a kind husband and father, a
good citizen and an honor and mainstay to No.
381. The daily papers were full of accounts of
heroism displayed during the flood and highly
eulogizing acts that compared to this one were
child's play. Bro. Hess is so far too modest to
seek any notoriety and consequently little or
nothing was said about this matter. That
brother Hess did the right thing at the right
time. That he did it well and saved many lives
is beyond the shadow of a doubt.

Fraternally yours,
R. O. Ferrin.

TRINIDAD, COLO., July 22, 1889.

Editor Firemen's Magazine:

Of late there is a great deal said about the engi-
neers coming into our federation. It seems that
the engineers think they are the "proper people,"
they don't want to federate for fear they will
help others. They are like the small boy who
went to church and heard the preacher say, "we
all have to be born again," and then went home
crying and told his mother he "didn't want to
be born again for fear he would be a girl." The
engineers have always carried a high head, and
to be born again, or to federate, means equality.
Time will tell! Equality is what the writer be-
lieves in. And I also agree with the editor of
our *Magazine* that the name of the order should
be changed to "Brotherhood of Locomotive
Men."

The writer being a member of No. 344, also
wishes to say we have been organized only a
short time. We are twenty strong, all working
for the good of the order.

Yours fraternally,
Smooth Line.

TO J. J. HANNAHAN.

Dear John, I'll your confessor be,
And at my penitential knee
I'll catalogue your crimes;
'Twill be a lengthy list, I know,
But minor ones o'erboard I'll throw,
In mercy to my rhymes.

I notice in the *Magazine*,
At various places you are seen,
All o'er this country ground,
You're here, you're there, you're everywhere,
And living on the best of fare,
That's furnished in the land.

Beware of gluttony, my boy,
It will your health and soul destroy,
And is a deadly sin.
You'll have to fast and hourly pray,
To gain the straight and narrow way
Where converts enter in.

The seven deadly sins are rife
With snares to kill eternal life,
And send you o'er the Styx;
Be careful, boy, its tide is hot,
'Twill blisters raise on every spot,
For all your festive tricks.

Obeys the ten commandments, John.
They're faithful friends to lean upon
In death's dark, dismal hour;
No matter how the scoffers sneer,
Obey them, and they'll shove you clear
Of Satan's dreaded power.

I know you are a social lad,
Magnetic, and you're far from bad,
But in temptation's way
Some good advice you'll hourly need.
Which here I give, so John take heed
Of every word I say.

Remember that you mustn't cry:
"Forgive my sins, oh, Lord on high,"
And play good devil too;
You must be truly penitent,
To gain forgiveness, earthward sent,
For sinners such as you.

In olden times repented rogues
For penance had to fill the brogues
Upon their feet with peas,
Then walk around a church or two—
I'll not be so severe on you,
I'll spare both feet and knees.

"Now, 'Thiggen Thu," as Frenchmen say,
Avoid temptation, watch and pray,
Until life's trip is o'er;
For penance let your olly tongue
Be still when ladies fair among,
Be good, and sin no more.

Shandy Maguire.

Changing the Name of Our Order.

RAT PORTAGE, July 15, 1889.

MR. EDITOR:—Since last writing, I have given a great deal of thought to the subject of a new name for our Order, and have carefully read the arguments for and against the proposition, and since federation has become a fact, I do not now see the difficulties that were before presented. At my last writing I had serious doubts as to the wisdom of such a change. The doubts I entertained were the fruits of a long experience in which it has always been a problem to me, how to assimilate old and young ideas. I have found that when men with two years experience, and men with thirty years experience, mingle together and attempt to remove any

evil, there was always friction, and if we change the name of our Order, and introduce a higher class of insurance, we enter into direct competition with the B. of L. E. Then there will be a fight for supremacy between our Order and the B. of L. E. and railroad managers will not be slow to take advantage of the struggle. I had hopes of a speedy return of true friendship between the B. of L. E. and B. of L. F., and this would have been brought about, had the B. of L. E. changed its obnoxious laws in time, but now I fear it is too late, and it will soon be in order to announce to the world, that the B. of L. E. has lost its grip on the Western Divisions of the Canadian Pacific Railroad. There are not one-half of the number of engineers employed on this Division who belong to the B. of L. E., and those of them who do belong, are discouraged at the prospect. And for this state of things, the B. of L. E. with its obnoxious laws, is directly responsible. For four years the engineers who have been made, have remained out of the B. of L. E., and this is not all; but some engineers who had been members of the B. of L. E. for many years, and under its fostering care, when they were called upon to pay assessments to aid their brothers on the C., B. & Q., either quit the B. of L. E. or were removed, and be it said to their shame, some of them own farms and cattle ranges, but were too mean to help those who had sacrificed all for the Order.

We have engineers who belong to the B. of E., who seem to have lost all knowledge of, or regard for true brotherhood principles, and who will take and hold runs that justly belong to their senior brothers, and it is wonderful what arguments they will advance to show why they should have what belongs to another. They have either done more for the company, or their ability is superior to that of their brothers, in their mind; and in view of the above facts, B. of L. F. men are expected to withdraw and join the B. of L. E., but we say "not any at this time, 'thank you.'"

Chas. Unwin.

Sunday Rest.

MR. EDITOR:—I find the enclosed paragraph going the rounds of the press: "By discontinuance of Sunday freight trains the Michigan Central has taken off 549 men from service on that day, divided as follows: Forty-eight engineers, 48 firemen, 59 conductors, 100 brakemen, 2 baggagemen, 15 telegraph operators, 71 agents, station men and clerks, 1 train dispatcher, 9 yard masters, 69 switchmen, 34 helpers, 2 switch tenders, 45 yard engineer and 45 firemen, 4 car checkers, 6 roundhouse men. The company operates 1,537 miles of road, and has about 8,000 employees. This must be regarded as a sample of what may be obtained in the way of rest by railroad men of the country, when the entirely useless and unnecessary practice of running freight trains on Sunday shall cease, and when the men shall have at least one day a week to themselves, to cultivate the acquaintance of their homes, their families and their God."

The Steam Railroad Men's Protective Union.

MR. EDITOR:—I will thank you for a small space in your next issue, as I am truly anxious to correct any wrong impression, which I am afraid many of our loyal brothers have received in regard to the aims and objects of the Steam Railroad Men's Protective Union.

From many communications which I have received from brothers of the "B. of L. F.," they imagine that this new order of railroad men, has been started with a view of weakening or breaking up the "B. of L. F." To all and every brother entertaining such ideas, let me say right here, that the promoters of the new union have the kindest feeling for every brotherhood or organization (by whatever name it may be called) of railroad men, and that instead of trying to injure any other organization, one of its chief objects is to strengthen those that are weak, and make those that are strong, stronger.

The promoters of this union know no distinction of class in their union. Every railroad employé from the president down to the lowest employé in the service, if he is sober, intelligent and industrious, is eligible for membership. The aims and objects of the union are, "to secure to the workers the full enjoyment of the wealth they create, and sufficient leisure in which to develop their intellectual faculties," to enable them to share in the gains and honors of advancing civilization; to shorten the hours of labor and to persuade their employers to agree to arbitrate all differences that may arise between them, in order that the bonds of sympathy may be strengthened between employer and employé."

With the increasing disposition among railroad managers to crush the several brotherhoods of railroad men out of existence, the Steam Railroad Men's Protective Union has entered upon its existence with a determination, by all lawful means at its command, to bring all unorganized railroad men into its fold. Experience born of disappointment and defeat, has conclusively proven to men in every department of the railroad service of this country, that to protect themselves against corporate tyranny and injustice, they must sink their feelings of pride and class distinctions, and recognize in every railroad man a fellow man and brother, having interests identical with his own, and making the interest of one the concern of all.

That there are great numbers of railroad men in every department of the service unorganized, will be readily admitted. Their excuse for not being so are mostly unworthy the men who make them, and are very often fallacious. Still there are many honest railroad men whose sympathies are with us and for us, but whose small pay, and large family demands, preclude the possibility of them ever becoming members in the most valuable of the several railroad brotherhoods; and it was for the benefit of such that the Steam Railroad Men's Protective Union was formed. We offer no insurance for disability or death, we leave that to the present existing

brotherhoods. We only offer the protection of a consolidated undivided railroad organization, to which every man employed on a railroad, can become a member by paying one dollar, for initiation fee, and fifty cents per month afterward to his subordinate union. Each union is at liberty to make such provision for accident, sickness and death, as in their judgment they think best.

My sincere desire to correct any wrong impressions which the members of the "B. of L. F." might receive of the "aims and objects" of the S. R. R. M. P. U. is my only apology for this long encroachment on your valuable space, and to all fraternal, benevolent and charitable orders, we send kind greeting, and wish them God speed to such of their members as desire to enlarge their circle of acquaintance, and to help forward the day when the railroad men of this country shall take their rightful place amongst the foremost intelligence of the land, we extend a hearty invitation, and cordial welcome to come into the "Steam Railroad Men's Protective Union."

Yours fraternally,

T. H. HAINES,

Grand Organizer S. R. R. M. P. U.

WINTHROP, MASS.

[The foregoing communication from the pen of Bro. T. H. Haines, Grand Organizer, is worthy of a wide reading, which the *Magazine* bespeaks for it.

The communication fully outlines the purposes which "The Steam Railroad Men's Protective Union" has in view, and few, we apprehend, will question its eminent propriety and usefulness. It is needless for us to say that this *Magazine* recognizes the great importance of organizing the railroad employés of the country. Outside of firemen, engineers, brakemen and switchmen, there are a vast army of men employed by railroad corporations, who are unorganized; to infold these men, to harmonize and unify them, to educate them in the line of the industrial thought of the times, is a work that should challenge universal approval.

The new Order is to be congratulated upon its good fortune in selecting Bro. T. H. Haines as its Grand Organizer. He combines in a large degree those elements of character which insure success. He has energy, intelligence and staying qualities required for the position, and the *Magazine* will watch with undisguised solicitude the growth of the new Order, and will most cheerfully lend such assistance as it can. Organization of the hosts of labor is the battle-cry of the period, and the more the work proceeds the nearer labor is to victory. —ED. MAGAZINE.]

GRAND MASTER S. E. Wilkinson, of the B. of R. B., dropped into our sanctum a few days ago looking as fresh as a pink. After smiling upon us and reperting "all well" he took his departure for the West.

AN ENGINEER TO BE.

When quite a youth I started out
 An engineer to be.
 I fired an engine for my father,
 The good old 48.
 My father said: lad, listen
 And do not have me stop.
 This engine will not pull a train
 With what goes through the pop.

So now my boy do have a care
 Or on the hill you'll stop.
 This engine can not pull a train
 With steam blown through the pop.

When just of age my father said:
 My son you are a man;
 I've given you education
 And will do everything I can
 To help you to the front my boy
 And my duty never stop.
 But bear in mind that steam is wasted
 That's once blown through the pop.

'Tis true I was a headstrong youth,
 And thought it the greatest fun
 To have my engine popping off
 While out upon my run.
 But several times it happened so
 That on a hill we'd stop,
 I had neither steam nor water
 For it all went through the pop.

But now my days are nearly done
 And soon will end my life.
 Take warning by what I have said,
 Avoid old booze and strife.
 Put by your dimes, your duty do
 And you will be on top.
 For remember it's not only steam
 That's blown through the pop.

Dock.

Something More About Insurance.

MR. EDITOR:—Will you please answer through your valuable *Magazine* a few questions, and you will oblige more than only the writer.

In the June number I see an article on our B. of L. F. insurance. Some time ago you published that the dues for said insurance must not be less than \$5.00 for three months in advance; now you come out again and say that it only costs, at the most, \$16.00 a year. Now, if it is \$5.00 a quarter, that makes \$20.00, does it not? Then you send us often special assessments. Then our own Lodge dues are to be paid. I know that our last six months' dues have cost more than \$16.00, and what the other six months are to be is yet to be found out. I think the dues on the two policies were really only \$32.00 and no more, not only an engineer but the poor firemen would take them out and be able to keep them up. There are many other Lodges, K. of P., and K. of H. that do not cost any more than we have been paying and which not only gives a policy of \$3,000, but give sick dues and bury their members, if in good standing.

I cannot see your motive in publishing the two statements in regard to dues. That is why you have issued cards of good standing, not stating what money had been received, so there will be many more join the Lodge, when if they knew what it really costs, perhaps they would have joined some other Order just as good. But after having put so much in the Lodge, it would

be very foolish to give it up. As you advise those engineers who have the two policies to do, that get set back they would be the loser, not the Lodge, for you do not say that they could take back the same policy, but you do say they can take out another policy. Where is the gain to them? I believe the Lodge is good and beneficial, and I do not find fault with it, but tell me how you make both of your published statements meet the understanding of your readers, and you will oblige. Yours,

Firemen's Friend.

[There is in the foregoing communication, however clumsily expressed, a disingenuous spirit entirely foreign from what should characterize a "Firemen's Friend." No contradictory statements relating to the insurance of the B. of L. F. have appeared in the *Magazine*.

It is not given to all men to be clear-sighted, clear-headed or magnanimous. They are not built that way. It is their misfortune. Still, we are disposed to aid "Firemen's Friend" and others, if there are more of his kind, to comprehend propositions so simple that a five year old boy ought to understand them at a glance.

"Firemen's Friend" does not state what Lodge he belongs to. In this particular, he was sufficiently shrewd to be shady. If he had, or, if he will name his Lodge, we can very readily determine whether or not, during the "last six months," his "dues have cost more than \$16.00." Again, "Firemen's Friend" does not date his letter. He writes in ambush, does not give his locality or his name; he cannot be traced, like a freight car. But, he does attack the *Magazine*, and hence we waive his chosen obscurity and questionable purpose, and reply just the same as if we knew him to be what he signs himself; a "Firemen's Friend." He says: "You sometime ago published that the dues of said insurance must be not less than \$5.00 for three months in advance." Manifestly "Firemen's Friend," refers to the following in December issue 1888, page 920.

All the new laws enacted at the Atlanta Convention take effect on the 1st day of February, 1889. This fact is of the highest importance to every member of the Brotherhood.

The most important of these laws is the one which relates directly to the Beneficiary Department of the Order. This law requires the payment of all dues quarterly in advance. All collections are under the head of dues, and under this new law dues are not less than \$5.00 a quarter.

It will be observed that the law requires of all members, quarterly in advance, and that "all dues" so required are not less than \$5.00 a quarter, not simply, insurance dues, but "all" dues. Insurance dues are not all the dues required to be paid and this "Firemen's Friend" knows, if he knows anything about the matter. He knows, if he knows anything, that there are certain Lodge dues to be collected, which have

nothing whatever to do with the insurance policy of the member.

Now, comes "Firemen's Friend" again, and says: "In June number I see an article on our B. of L. F. insurance." This is what we said, among other things:

The present insurance system of the B. of L. F. is conceded on every hand to be the most practical, the least expensive and the safest that can be derived—in a word, it is so near perfection that it is no longer a subject for discussion in the Lodges or in the conventions of the Order. Under our system, every member of the Brotherhood is insured. He has a policy of \$1,500 which costs him not exceeding \$16.00 a year, less than five cents a day—a cost so small that should he pay the amount for fifty years, and then die, his heirs would be the gainer by \$700.

Now, taking what we said in December, and what we said in June, "Firemen's Friend" assumes to see a discrepancy, or some one assumes to see it for him, whereupon he writes a communication manifestly prompted by a malign purpose. But our pity and patience are equal to the task, and as "Firemen's Friend," evidently belongs to a class always handy as tools for those who desire to use them, we have concluded to bunch them and thus demolish the pile.

The law of the B. of L. F. fixes the quarterly dues of its members at \$5.00, hence, for the year of four quarters, at \$20. That statement was made in December, 1888. In June, 1889, we said that a policy for \$1,500 costs, "not exceeding \$16.00 a year."

Now, then, we have the two statements which have so greatly disturbed "Firemen's Friend." Tabulated the account with "Firemen's Friend" would stand as follows:

"Firemen's Friend" to Lodge No. Dr.
Quarterly dues provided for by the laws of
the B. of L. F. for the year 1889.
Four quarters, at \$5.00 a quarter \$20.00
CREDIT.

For eight insurance assessments, at \$2.00
each \$16.00
For Subordinate Lodge purposes \$1.00 \$20.00

Possibly the foregoing is not sufficiently plain to suit "Firemen's Friend," but it ought to. The reference to "K. of P." and "K. of H." is of no consequence whatever; nor do we regard any other part of "Firemen's Friend's" communication worthy of notice. The B. of L. F. has, it is universally conceded, the best, the safest and the cheapest insurance known to the Brotherhoods. It has challenged the best thoughts of the Order, and it would be difficult to improve it. Under it, the Brotherhood is prospering, and whatever "Firemen's Friend" may think of himself, he is of too small calibre to do it harm.—ED. MAGAZINE.]

MICHIGAN, CITY, INDIANA, July 8, 1889.

Editor *Firemen's Magazine*:

Harbor Lodge, No. 309, Brotherhood of Locomotive Firemen gave its first annual ball at Mozart hall on the evening of July 4. The hall was decorated in a very beautiful and artistic man-

ner and presented a gorgeous appearance. Flags, streamers, railroad lanterns, flowers, etc., were used in the decoration. Chas. Miller's orchestra furnished the music and a Chicago gentleman, who was especially engaged for the purpose, did the calling. The attendance was large, many persons from abroad being present. At 12 o'clock supper was served by J. E. Shultz, the well known caterer, after which dancing was resumed until a late hour in the morning. To say that the affair was a success in every particular is speaking very mildly.

Bro. Campbell deserves great credit for his good management, from beginning to end. We had the right man in the right place by making Bro. Campbell chairman of the committee; Bro. Henry acting as floor manager. We would naturally think he has followed the business all his life. And there is no word that can better fill the place of "hustlers," than in referring to Bro. Brown and Bro. Cross in the check room, where they watched with the same regularity as they do the needle on their gauges. And there was no need of any police force to quell any disturbance, for verily, Bro. Fitzgibbons and Bro. Crossley made a good team at the door. It would have been impossible for any one to enter without a ticket, or who was not straight. And then there are the good sisters, who so generously helped, and, in fact, managed the floral decorations, which were never equalled in the city hall. Much credit and praise is also due Bro. Whitley, our ex-Treasurer, who managed the ticket office and took great care of all the old iron dollars as they came flying through the window. In fact, every part on the programme was allotted to those who seemed to fill the places best. The night was cool and everything passed off pleasantly. Everyone seemed well pleased and satisfied, none leaving the hall until the music ceased, and all regretting that our Grand Master and Grand Secretary could not be with us.

Kalamazoo.

Marriage Not a Failure.

MR. EDITOR:—You will oblige me by giving space to the following from the Mount Carmel Register: "At Keensburg, this county, a few days ago, three men were talking about 'marriage being a failure,' when one of the number, who was a farmer said, 'Why, there's my wife gets up in the morning, milks six cows, gets breakfast, starts four children to school, looks after the other three, feeds the hens, likewise the hogs, skims ten crocks of milk, washes the clothes, gets dinner, and does all the sewing and patching and many other things too numerous to mention. Do you think I could hire anybody else to do it for what she gets? Not much. Marriage sir, is a success, sir; a great success!'"

The foregoing is commended to our friend Shandy Maguire, as I am persuaded that it will have a tendency to modify his opinions on that interesting and widely discussed subject.

Member.

Conemaugh Scenes and Sacrifices.

CONEMAUGH, PA., July 30, 1880.

MR. EDITOR:—Perhaps it will interest the Brotherhood at large, to hear from Lodge 381, for we have been in existence for more than a year and no one venturesome to write, and especially at this time, as we are located in the Conemaugh valley, the scene of the recent disastrous flood causing such great destruction of life and property, of which much has been written.

Now, we are all alive and kicking, for we were fortunate enough to escape the flood without the loss of one member, although some of the boys had an experience not to be envied, some lost all their property, some lost relatives and we all lost numerous friends and acquaintances. Bro. G. E. Lingle lost his mother. The rest of the family were in the water two days before they were rescued. You ought to hear some of the boys recite their experiences, but as there is a limit to time and space, we cannot give it to you at present for it would make a whole chapter. But we want to make brief mention of the noble and praiseworthy act of our Receiver Bro. J. C. Hess, to whom many are indebted for their lives. He was engineer of Engine 1,124, hauling work train, and seeing the flood coming he ran ahead into town blowing the whistle and giving the final warning that saved many lives, as they can testify. He narrowly saved his own life in his eagerness to save others. His home was on Front street, and his wife was at the gate calling him to save himself; the water was then upon him and took his house at his heels. Our hall was not taken, although the water was up around it, but all the rest were taken, consequently we now rent to the Engineers, Chosen Friends, Eagle, Mechanics, etc. There was no indication that we ever had a railroad, for there was no sign left of the roundhouse and shops. The turn-table that was on a level with the surface of the ground and encased in brick, was taken and all our engines were carried away. The engines were principally the class "R," weighing sixty tons, twenty-seven in number. Some were carried one-half mile away and imbedded in the sand so that they could not at first all be accounted for. This may seem incredible to you, but it is a fact of which thousands of visitors have satisfied themselves.

Now, although there is a large force here at work very little showing is made compared to the work to be done, and it will be a long time before our town will be what it was; however, we are not idle or despondent (although badly handicapped at first) but working hard to assume position and restore facilities for business again.

Our Lodge is prospering (regardless of our misfortunes) for we have a set of boys with the spirit and determination to win and no intention to surrender let come what may. We had arranged for a picnic to be held at Nineveh on July 20th, at our last meeting before the flood, and anticipated a good time as our picnic last season was a success socially and financially, but we can survive the disappointment. We are

greatly interested in the working of the Order, especially the Federation scheme now in operation and are anxious to see the new name whatever it is to be. Several of the names suggested would be appropriate, but we think Brotherhood of Locomotive Men would be preferable. We have a number of members on the right side, who will remain in the fold, stay coupled on, having no desire to cut loose, run wild and get off the track into the ditch for there is no question about the B. of L. F. being the most profitable and the more desirable. No sir, no severed connections with the B. of L. F. to join the B. of L. E. It is not required by any other Order, and the B. of L. E. will be a long time getting any more recruits from the ranks of the B. of L. F. with this and other existing obnoxious laws. Now as they are pursuing this indiscreet and selfish policy why not change the name of our Order to suit conditions regardless of their welfare, for are they not responsible? Haven't they driven us to it? We have played cat's paw long enough, and the opposition to the change of name (as observed by reading some of the letters in the *Magazine*) is simply due to misconception. They will have to advance arguments more logical to debate the question. We are great friends with the Brotherhood of Engineers here, who are disposed to treat us kindly, who do not advocate but would repeal these laws, if they had the authority and are not responsible for the action of the convention.

We have had a few of the fraternity visit us since the flood and will be pleased to see all the boys come that can, for it will be found interesting and if you do not forget to present your credentials we will try to make you comfortable during your stay. The ravages of the flood cannot be described, especially by the writer's ability for it is very limited, hence you will make due allowance for this first venture.

No. 381.

THE PLAYMATES OF BOYHOOD.

Where are the playmates of boyhood,
That joined our sports in years so long ago?
Oft roaming through meadow green and wild-
wood.

Free from the world's strife and woe,
Scattered all, vanished all from my gaze;
Still in remembrance clear shall never fade;
Forever flown those happiest of days
When streamlet boats and gaudy kites we
made.

Where are the playmates of boyhood—
Frollicsome Tom, with ever-twinkling eye,
Brave Jack, shy Owen, just out of childhood—
The heart but answers back a mournful sigh.
Some may sleep, sweetly sleep within the grave,
Many in foreign lands perhaps do roam.
Work in the mines, breast the sea-wave,
And others wealth and comforts of a home.

Where are the playmates of boyhood?
Methinks I see their faces all aglow,
When winter stalked the land in wild mood—
In mimic war from battlement of snow,
How I long, ever long to behold them,
Hear their voices in old-times merry strain
Grasp hands, all thoughts of sorrow steth,
Recall past scenes, and feel like boys again.
TORONTO, ONT.

John Tierney, Jr.

A Beautiful Testimonial of Esteem.

MR. EDITOR:—The purpose of this communication is to show that locomotive engineers appreciate generous treatment, and are ready at all times to bear testimony in a substantial manner in that direction.

In the month of December last, we were informed that Mr. Peter Curran, late of the Erie shops at Susquehanna, would be our Master Mechanic of the Bradford division of the N. Y., L. E. & W. R. R. We wondered what new changes would occur in the motive power force of the division. Would they be for the better or for the worse—or would the same old round remain undisturbed. Time passed on and Mr. Curran came. We found him to be a man passing down the grade of life with a good grip on the air-brake and throttle, with an ever watchful eye for a chance to replenish the exhausted air. He was decided, considerate and just in his intercourse with the boys, making no discriminations in his treatment of them. Thus we learned to respect him, and to regard him as a man, in all regards qualified to be our Master Mechanic. We found him to be a thorough machinist, a man of large experience, and one who paid strict attention to business, and one we believed would be a success and a great advantage to the company. You may imagine that our surprise was great when, on July 1, we learned that Mr. Curran was to be transferred to Salamanca and that Mr. Conklyn, an old veteran engineer of the Susquehanna division of the Erie, was to take his place, and that Mr. Curran was to take charge of the shops at Salamanca. Thus we found a friend was about to leave us—one who, in a few short months, we had learned to respect and obey as our superior; one from whom we had looked for advice and could trust as a friend. This being true, the time had come for us to extend to Mr. Curran our good wishes, and in so doing we thought that some substantial token of our esteem would in future speak for the boys, and show that the want of gratitude for kind treatment is not one of their sins. As a consequence, arrangements were made and Mr. Curran was invited to Bradford to attend a meeting of engineers and firemen to decide certain questions relative to the mechanism of the iron horse now in use on the Erie, and being ever ready to assist the boys, he responded to the invitation. About 9 p. m. a committee escorted Mr. Curran to the B. of L. E. Hall, where about fifty firemen and engineers were assembled to meet him. Mr. Primmer was made chairman of the meeting, and made a neat address in which he simply hinted at the real purpose of the gathering. He was followed by Mr. Ed. Willoughby, of No. 11. His speech was suited to the occasion, and he stated that the firemen and engineers had concluded to apprise Mr. Curran, their late Master Mechanic, of the high esteem in which he was held by them, and in concluding his eloquent address, he presented Mr. Curran with an elegant silver tray and set, and a gold-headed cane, as a testimonial of esteem the engineers and firemen entertained for him, and concluded by

expressing the wish that he might always, in going up the grade of life, have plenty of sand and a full head of steam, and that success might always attend him.

Mr. Curran was taken completely by surprise. He appreciated the gifts, and could not suppress his tears, and he expressed his thanks in generous words for the elegant token of friendship he had received, and assured his friends that the occasion would remain ever fresh in his memory. Remarks were made by a number of the men present and when the meeting adjourned, it was to the Union House, where a sumptuous supper had been prepared.

The inscription on the silver tray consisted of the names of engineers and firemen, and that upon the cane was simply, "From the Boys."

The occasion was highly enjoyed by all present.

Fraternally, *Kingan.*

BRADFORD, PA., July 31, 1889.

MERIDIAN, MISS., July 21, 1889.

MR. EDITOR:—Faith Lodge, No. 200, entertained their friends at a grand ball at Con Shean's Hall, Tuesday night, May 3d,

Promptly at 8 o'clock a few stirring strains from the band announced the B. of L. F. grand march, led by Mr. P. McHale. This beautiful feature over, the guests gave themselves up to the dance with a light-heartedness that was pleasing to look upon. There were about fifty couples on the floor, as each dance was called, and through the happy hours from 8 p. m. till 4 a. m. your correspondent failed to find anyone who was tired.

The decorations of the hall were appropriate and fair to look upon. At one end of the hall two scoops were crossed, in token of the labor of the gallant lads in charge, while at the side those otherwise grim old walls presented to the admiring eye of the beholder the name and colors of the B. of L. F., and from beneath its frescoes were fragrant flowers.

At 12 o'clock a goodly crowd assembled around the ample board, whereon was spread every delicacy that an epicure's imagination could suggest or his palate admire.

The feast over (and it was not finished as quickly as I have written it) the guests turned their attention once more to the luring wall, and seemed to find its charms undimmed by the late hour.

At the close of the ball, Mr. Pete McHale was presented with a golden badge of his Order, in token of the appreciation of his tireless efforts in their behalf.

I could not assume to give the *personnel* of this grand affair without doing great injustice to my subject. If I might wield the brush of a Rembrandt or Raphael you might have a true picture of this occasion as it was, but I have only this jaded goose quill, and powerful as is the pen in some cases, it would be weak in portrayal of things so bright. Suffice it to say that those who attended this ball will long have a warm place in their hearts for the boys who handle the scoop.

A Guest.

BELFIELD, VA., July 23, 1889.

Editor Firemen's Magazine:

Please permit me space to inform the readers of the *Magazine* that we have another noble Lodge added to the already long list of our good Lodges.

Although this is my first attempt in writing to the *Magazine*, I hope that it will give some of our readers the interest that we are taking in the noble cause. Bro. Hannahan came down on last Saturday evening, and on Sunday we organized Elizabeth Lodge, No. 403, with twelve charter members to put on the roll, and on Sunday we had a special train for the firemen to attend the organization, and it makes us feel proud to say it, as it was the first special train granted to the employes of the road since it has been in operation, and we want to extend thanks to our noble Superintendent, Mr. Bateman, and Mr. Robinson, our Master Mechanic, for the train and courtesy extended to us on our trip. We left Belfield on Sunday morning at six o'clock, and had a very pleasant run to Portsmouth, and on our arrival there we found Bro. Hannahan on docket at the Ocean House, and went to work with the business that afternoon, as the B. of L. E. meets in the hall, but they held a special meeting in the morning so we could use it in the afternoon, and we feel very grateful to them for their kindness. We all took dinner at the Ocean House, kept by Mr. Charles H. Johnson, who knows how to put up a good meal, and keeps a very nice house. After dinner was over, we repaired to the hall, and on our arrival we were the recipients of a nice box of cigars, presented by Division 331 of B. of L. E., for which we thanked them very kindly, and hope some day to repay their kindness. Well, we then got to work with our organization, and through the noble efforts of our Organizer, Bro. Hannahan, by five o'clock we had Elizabeth Lodge, No. 403, declared one of the noble band at the front to push forward the good work. We then went to the depot and found the train in readiness to start back on our homeward trip. All got aboard except myself; I stopped over with Bro. Hannahan to finish up the business that we did not have time to conclude. Well, we got through that night, and concluded that on the morrow we would take a trip to Ocean View, one of our many watering places that we so highly boast of in our State. We arrived there at 11 o'clock, and found everybody enjoying themselves. We then walked around the place and finally procured a bathing suit and prepared ourselves for the briny deep, where we had a good swim, which Bro. Hannahan enjoyed very much, and then we prepared for our homeward journey. We arrived all safe and partook of a hearty meal, which we enjoyed after our good swim in the ocean, a pleasure which no one who comes to the ocean should go without. At four o'clock I had to leave for home, and regretted very much to leave Bro. Hannahan, who is just the right man for our Brotherhood, and is held in high esteem by our Brothers of 403. Bro. Hannahan left at

5 o'clock for Dunmore, Pa., where he will organize a lodge next Sunday, and may he still keep on with the good work that he has so well accomplished.

I am a member of Lee Lodge, No. 275, and will join 403 as soon as I get my withdrawal card, and would have joined last Sunday, but did not get it, but hope that I will soon be ready to unite with the boys in 403. We will have two new members to initiate next Sunday, and hope that by September we will number fifty strong.

With one more word and I will close, as I have written a long letter and may tire some of the readers, but I wanted to give them a description of the birthday of 403, and may God speed our noble Brotherhood with its good work.

Willie Whitehead.

MT. TACOMA, WASH. TY., July 15, 1889.

Editor Firemen's Magazine:

It is a long time since anything appeared in the *Magazine* from 192, and I will therefore try my hand. At this time last year it was hard work to muster a quorum, most of the old hands having withdrawn and joined the B. of L. E. Thanks to Providence, their tracks are filled with as good or better material, and far superior in energy. As far as Lodge work goes, we can have more in attendance at meetings now than the membership numbered one year since. Our ranks number about fifty good boys, and twelve more applicants waiting, and what is better, several more want applications. At our last convention No. 192 was scarcely known; wait till the next, then note the change.

I have a few remarks to make of the boys and what they are doing. Bro. Geo. E. Ames furnished us with a pair of fine Brook's locomotive, also one pair of Baldwin locomotive pictures; they are dandies, and set off the hall finely; thanks to the manufacturers. Harrison thought we should have a Bible and altar-cloth, so he set out to get them, drew up a subscription paper and procured them, costing \$47.50, I believe. I tell you they are splendid. Several of the others, in fact, the majority, think we should have regalia.

In the July number of the *Magazine* I notice an account of federation. Some communications speak of cold water being thrown on it by B. of L. E. men. They are not and never were "Q." men. Ask the Hannibal men what they think of the B. of R. B. men and S. M. A. A. They were more loyal than a great many engineers. My motto is, if the engineers want to federate let them ask; don't ask them. We have bowed to them long enough. I, for one, think we can sail our own boat and dance to our own music, and not play the fiddler for some one else, as we have done heretofore. Mr. Wheaton, of O. R. C. fame, should sweep his own doorstep before sweeping his neighbors. If the Grand Officers of the B. of L. E., or any other organization, were half as contemptible as the head officers of the O. R. C., I, for one, would cry shame. The B. of R. C. is coming to the front out here pretty fast; speed the day when it is all over the continent.

Cum Tuis.

YOU BET!

Some More Cogitations.

BY SWITCH.

MR. EDITOR:—With regard to federation, I have given it close consideration, made it a focal point of cogitation,

You bet.

And freed from all delusion, I have come to the conclusion, clean cut, without confusion, that it's just the thing we wanted.

You bet.

As an *E. P. Unum* alliance, 'tis the culmination of prescience, something more than defiance,

You bet.

For it tells of the dawning, of that long-prayed for morning, when degradation scorned workingmen,

You bet.

Fully comprehending, the wisdom of blending their powers for defending, will march on, ascending,

You bet.

Will march on united, free, independent and clear-sighted, victorious and delighted, they'll rejoice in their freedom,

You bet.

As they see oppression disappearing, and with ears attuned to hearing, jubilant songs and cheering,

You bet.

They'll wave their federation banners, and shout their hosannahs from mountain peak to Savannahs,

You bet.

And redeemed from degradation, by the genius of federation, that made the United States a nation, they'll be true,

You bet.

And while the heavens bend above us, while God continues to love us, and shower His blessings on us, we'll grow stronger,

You bet.

And our federated brothers; brothers above all others, for the sake of children, wives and mothers, will ever be united,

You bet.

Then three cheers for the firemen, you can't frighten them nor tire them. Gods! I admire them,

You bet.

And three cheers for the switchmen, you can't ditch them nor twitch them from their purpose,

You bet.

And three cheers for the brakemen, no matter how you take them, traitors you can't make them,

You bet.

And now, three cheers, one in three, three in one, when mountain rise, and rivers run, from the rising to the setting sun, for federation once begun, bequeathed from heroic sire to son, will go on,

You bet.

SPRAGUE, W. T., July 24, 1889.

Editor Firemen's Magazine:

As we so rarely see a communication from No. 133, I have concluded to throw the scoop in the pit for a few minutes, and take up the "quill," and like "Harkins," will attempt to "get in a word."

No. 133 is now in good condition and enjoying a rapid and healthy growth. The best of interest is shown, and our meetings are a pleasure to all. But my chief motive in writing this letter is to say something in regard to more important topics which are now before the B. of L. F. for their consideration. We are glad to see the progress made toward Federation. All are in favor of the plan so far as we are able to learn, and hope and believe that it will be a success. As to changing the name of our Order, there seems to be a few who object (only a few, however.) The chief objection is on the same grounds which Bro. Meade urges in the June issue of the *Magazine*. They say, "If anyone feels that he has attained so high a position that he does not wish to be called a "fireman" *let him withdraw*. The name of *fireman* is good enough for me. We surely think that when a brother has that idea he does not understand the real motive which we have for desiring a change of name.

In any and all organizations which exist for any length of time, there is a necessity for changes which must be made to suit surrounding circumstances.

There are several reasons why the writer believes in a change of name. Now, I do not intend beginning a tirade against the B. of L. E., for I think that has already been overdone, but will only use that which is necessary to express my reasons. The B. of L. E. stands aloof from us, so far, and we cannot expect them to do otherwise in the future.

Brethren, I ask you, are you willing to "leave well enough alone" and every year see the best material of our Order go to strengthen an Order which is in no way in sympathy or in accord with us? How can you expect the B. of L. F. to make farther progress, if the "withdrawal mill" grinds on in the same old way? And you may be sure that it *will* do so unless we change our policy.

Others object for the reason that we will "stir up bad feelings." I do not understand this to be a movement for such a purpose nor that it is "spite work," but simply a move toward self-preservation. We hope that it may not cause a war, but let us not hesitate on that account. Let us have the "Brotherhood of Locomotive Enginemen," and if it does stir up a strife let us meet it as Nasby expressed himself when he took the stump for "Androo Jonson:" "I go into this campaign in jolful spirits and like an old war boss I raze up my hed an tale and cry ha, ha to the carnige." Because a measure was good in the past is not necessarily a reason why it is the same at present or for the future. Brethren let us move on.

Idaho.

DODGE CITY, KAN., July 17, 1889.

Editor Firemen's Magazine:

I have been very much interested in the discussion going on in the *Magazine* for the past five months, relating to a change of name, but have been waiting for others to write from this point. I like the fearless manner in which the *Magazine* has handled and is handling the subject, and also the letters from Brotherhood men coming from all parts of the country, and I am heartily in favor of the change in the name of the Order, and further, I regard it as an almost imperative necessity, and would be in favor of the Grand Officers submitting a proposition to the Subordinate Lodges at an early date. There appears to be considerable difference in opinion expressed as to the propriety of some of the names suggested, but very little opposition to a change of some kind. While I am regarded by my brother firemen as very conservative I am fully persuaded that the time has arrived for some definite action in the matter. Circumstances of such a nature as to rapidly develop ideas and settle opinions in this regard, have been passing in remarkably quick succession in the past few months, and if the signs of the times are to be regarded there is little doubt of the unanimity of the vote which the suggested proposition would receive in its favor if submitted to the Subordinate Lodges at an early date.

We have several promoted firemen, members of the Order, who have repeatedly said that they would stand by the "good ship" so long as she continued to hoist on high her present motto and standard of principles. Flattery, intrigue and intimidation were successively (not successfully) tried upon one of our members by members of the B. of L. E. to induce him to leave the B. of L. F. and join the B. of L. F., but he is still firm and loyal to manhood and honor.

While the estrangement of the B. of L. E. and B. of L. F. will work a detriment to the cause of labor, I do not want the B. of L. E. to change one syllable in their constitution to please the firemen. They have made their boast that they were *invincible*, and did not need the assistance nor support of the B. of L. F. I would suggest that the B. of L. F. proceed to demonstrate the correctness of the boast by simply withholding the supply of fresh, new blood (promoted firemen) from the veins of the B. of L. F., which has supplied the arteries of the B. of L. E. all these years, and if all promoted firemen in America appreciated the situation as do I, the life-giving stream would certainly be very abruptly cut off.

To my mind the B. of L. E. and the B. of L. F. each has a mission to perform in solving the great labor questions of the day, but I doubt not that the labors of both would be in no small degree facilitated by a perfectly harmonious action, but as the B. of L. E. expresses a desire to stand alone it therefore remains for us to discharge our duties faithfully and well, and thereby acquit ourselves of all the responsibilities of our calling,

and continue to build up and strengthen our reputation for sobriety, morality and genuine efficiency, and the day will early dawn when the last shadow of doubt will have entirely vanished from the horizon of our grand and noble Brotherhood, and the day star of equity, justice and equality between man and man, employer and employé will guide us triumphantly to victory in which we shall experience an era of unprecedented growth in numbers and strength.

The friends of federation at this point are numerous, and we all are patiently (?) awaiting its consummation, which we hope will be realized at no remote date. For dealing with politics as well as corporations, we need more honorable and conscientious men in our legislative halls, and the labor organizations, if united upon a firm basis, can easily place the desired type of statesmen in position to represent us, and rather than a sentiment, I wish that the following lines were a description of the legislator of the period.

"The world wants men—true men,
Who can not be bought or sold;
Men who will scorn to violate trust,
Genuine gold.

The world wants men—pure men,
Free from the taint of sin;
Men whose lives are clean without
And pure within."

Progress.

DE SOTO, Mo., August 6, 1889.

MR. EDITOR:—I have been a reader of the *Magazine* for a number of years, and have taken great pleasure in perusing its contents, and not finding anything from this place for a long time, I think it time some one woke up and did something. In looking over the August number I observe that "Rip Van Winkle" has at last awoke, and lo! he sees no wrong done to our Order by anyone. He cites an instance of what his lodge did to the fireman on his division, who were members of the K. of L. Such work was more worthy a Corbin, a Stone or a Sweet, than Brotherhood men. What right have we to dictate to American citizens what organization they shall belong to, so long as they are not inimical to the government of the United States? You may as well discard a man on account of his political or religious belief. "Rip" wants federation, yet he practices those very things that would kill federation at the start. He is opposed to any member of our organization being a member of another labor organization. Why? "Because no man can do justice to more than one lodge." Strange, isn't it. Old "Rip" had better lower the blinds and go to sleep again. Our Order has grown out of its infancy, and its name should be changed. I care not what the new name may be, so that it is suitable to the scope of our Order. It is not necessary for us to wait to see what others will do. We have waited in patience long enough, and now it is time to act. We have a nice lot of boys in DeSoto, a good set of Officers, and are moving along nicely, working for federation.

Nemo.

TO BESSIE BENJAMIN BUCKLEY, OUR KITTEN.

(These lines are affectionately dedicated to D. W. J. Mahoney, of Adopted Daughter Lodge, No. 3, Jersey City, N. J., by the author.)

Dot gitten's name vas Bessie
Mit Benjamin behind.
Dot kommittee dey haf said it
Und dey vas neffer blind.

His blue eyes dey do sparkle
Und his ears dey look so nice.
Und den he drums upon his feet,
But it vas not after mice.

He likes a little piece of beef
Un schmaks his lips for more.
Un ven he plays mit under kats
He rolls upon dot floor.

Now Dan spent all his monish,
Going rount among dose poys,
Un could not buy a bresent
On Christmas I suppose.

So he spied dot little kitten
At dot house two forty-three,
Und asked if he could take it
Py Philadelphia.

So Mrs. Spear consented
To dose vishes of poor Dan.
Un ven you got dot kitten
O, lofe it if you can.

By order of dot kommittee

Hons. Von Der Dicken,
Sec'y.

Educating Firemen.

MR. EDITOR:—Under the caption of "a new name," from the *Locomotive Engineer*, the last paragraph strikes me as something that ought to have been done long ago. Let each Lodge purchase books and subscribe for periodicals devoted to subjects of interest, which bear upon our calling. Let the Lodges procure models of the different parts of the locomotive, and then let the men tell what they know about them; the experience they have had, and thus instruct the young men and help all. What a good way it would be to get posted on air-brakes etc. Pass around the hat on meeting days. Save a few nickels from your cigar bill every week and you will see how much more good it will do you and the rest of your brothers than if you had burned it up. Let the Master name some brother every meeting to talk on some subject at the next meeting, and then, if he does not know what to say, there in the lodge room on the books and models to turn to and he can soon post himself. Then when we are called to be examined by the M. M. we won't be trembling in our boots, for we will be posted on the machine and have confidence in ourselves. "Brotherhood of the Footboard is good."

J. R.

[The suggestion of J. R. is an excellent one and ought to be heeded. Every Lodge could easily have a valuable library, and the money so expended would be a profitable investment. Say for instance the Lodge meets twice a month, 24 meetings a year.

Suppose it has 50 members and at every meeting they contribute five cents, a nickel each. In a year this would create a fund of \$60 an amount sufficient to provide the lodge with many valuable books and papers. We hope the Lodges will be induced to adopt the suggestions of J. R. they are eminently wise and practical.—ED. MAGAZINE.]

COBISCANA, TEX., July 14, 1889.

Editor Firemen's Magazine:

Magnolia Lodge, No. 226, is the Banner Lodge of the State. We make our words good by our acts. No. 226 has gone through the fight with the C. B. & Q. and can still come to the front. With the quarter ending April 30, 1889, we had \$329.30 in the treasury. Who can beat it? We are gaining members at every meeting; members that any Lodge may be proud of.

In the last number of the *Magazine* I see several communications in regard to changing the name of our noble Order. One might judge that it would have as many aliases as the bad man that comes to Texas or passes over the line into Canada. I think in justice to the firemen who are promoted and still stand by the ship, that there should be some change in the name. I think No. 226 would be in favor of Brotherhood of Locomotive Engineers and Firemen. Under that name we could represent a brother of either profession he might be in by simply using two kinds of traveling cards. No red tape or no extra work, and no theft from the order of the B. of L. E. The objection to the name of Brotherhood of Enginemen, I think, would be this: All men in the locomotive department come under the head of Enginemen.

I see in the June number of the *Magazine*, page 549, an article written over "No Name," on insurance under the regime of the Brotherhood of Locomotive men. I for one with all my friends will fight it to the bitter end, and you can not pick up a number of the *Magazine* for the last two years but what you can find in some part of it dissatisfaction between the B. of L. F. and the B. of L. E. To think that the question is agitated in all the Lodges of the United States of changing the name of our noble Order so as to make things more satisfactory, and then some man gets up and says, "Oh, yes; as you are an engineer we will let you carry as much again insurance as the fireman." I say no! in box car letters. I for one (and I have heard more of the boys express themselves in the same way) think it better to raise our insurance to \$2,000, and make it compulsory upon all, and not allow a man, just because he is an engineer, to carry any more insurance than a man who is a fireman. We are all white and free born. I am in favor of changing the name of our Order to suit all requirements, but whenever we enter the Lodge room we all go in on one level. And if we can't go in that way I say die under the flag as it now hangs.

Yours fraternally,
Dick.

Personal.

JOHN HILE officiates at Susquehanna.

THERE are no better men than Gingrich, of Harrisburg.

P. L. CUTLER is one of the moving spirits at Bloomington, Ill.

A. H. SUTTON, the old veteran, still holds forth at Decatur, Ill.

JAMES GABRIEL is one of the "tried and true" members of No. 361.

F. J. KISTLER, Receiver of No. 9, is a "hustler" of the first Order.

JAMES FORDYCE has made Deer Park Lodge, No. 1, a model Master.

PETER McHALE, of Meridian, Miss., fills the position of Master to perfection.

WHAT's the matter with Con S. McAuliffe, of Milwaukee? He's all right, you bet.

J. J. KNAUFF is a "hustler," and Buffalo Lodge, No. 12, is not unkindful of the fact.

JOHN H. KERNAN is an ideal Receiver and the members of No. 361 appreciate his services.

FRANK DUPELL has been elected Master of Vigo Lodge, No. 16, and is making a good one.

As an efficient Secretary, Bro. J. T. Burke, of Avon Lodge, No. 38, stands at the head of the list.

For a model Master we refer to Bro. E. E. Pruyn, of No. 99, who is heart and hand in the cause.

J. E. POWELL is one of the leading lights at Parsons, Kan. His hand and his heart go together.

JOHN S. OTT is recognized as the moving spirit at Brookfield, Mo., and his record is as clear as a bell.

THERE is considerable speculation at Washington, Ind., as to the identity of "Walking Oil Can." Guess again boys.

CHAS. E. BARKMAN, Receiver of Deer Park Lodge, No. 1, is now in the grocery business at Port Jervis, N. Y., and doing well.

FOR quick and correct decisions, fair and impartial rulings, Bro. C. W. Martin, Master of Adopted Daughter Lodge, No. 3, is the peer of the best.

CHAS. SCHERMERHORN (what's in a name?) is one of our active members on the O. & M. and always has a cordial greeting for a Brotherhood man.

WM. J. BRUMAN has honored the position of Secretary of Buffalo Lodge, No. 12, a long time and enjoys the unbounded confidence of his Lodge.

JAMES HYNDMAN and W. E. Sullivan are doing heroic work against tremendous odds at St. Joe. They will come out triumphant without a doubt.

F. C. DONIGAN smiles superbly when the band begins to play and the banquet string is pulled. "Massa Donigan am a mighty good man, mighty good."

CHAS. WALTERS is running a yard engine at Washington, Ind. No. 361 is good enough for him and *vice versa*. Charley has staying qualities that cannot be excelled.

A TIRELESS worker and a typical Brotherhood man is Bro. E. W. Wallbaum, of Chicago Lodge, No. 95. His record is such as any man might well feel proud of.

W. H. AND M. J. CUNNINGHAM are loyal supporters of the Brotherhood. They are both on the O. & M., and are enrolled as members of Tried and True Lodge, No. 361.

CHARLES W. MAIER is a truly representative Brotherhood man. At Parsons, Kan., his home, he is known by every man, woman and child and held in universal esteem.

JOE CAPNER, JR., of Adopted Daughter Lodge, No. 3, has considerable of what Sam Jones calls "stickability." Joe makes sure that he is right and then goes ahead with a will.

P. J. McNAMARA is doing excellent service as Receiver of Buffalo Lodge, No. 12. In making up his accounts he is ably assisted by Mrs. McNamara, who is earnestly devoted to the Order and its welfare.

EUGENE CRAWFORD, of the Erie, is level-headed, and the boys have immense faith in him. We met him not long ago and found him to be the same staunch, stalwart Brotherhood man he ever was.

THE tramp who stopped Bro. Kernan, of No. 361, on a dark night in July with a view of consulting that gentleman's inventory, was disappointed. Bro. K. switched out on the main line and started "West," making "vestibule" time.

CHAIRMAN WALTON, of the Grand Executive Board, and Vice Grand Master Hannahan, have been solicited to attend the Paris Exposition and participate in the international balloon ascension. They have taken the matter under advisement.

ONE of the most earnest, intelligent and enterprising members of Tried and True Lodge, is Bro. W. E. Ensign, who holds the office of Magazine Agent. He is a young man of sterling good habits, and if he doesn't in some way make his mark we will miss our guess.

WHILE attending a meeting at Jersey City, lately, we met a number of the old time members of Lodge No. 3, among whom were Bros. Hutton, Logan, Auchter, Sweet, and others, all of whom we found thoroughly interested in the good and welfare of the Order.

THE old veterans of Just In Time Lodge, No. 149, such as Ford, McCaffrey, McColl, Donigan, Freeman, etc., hold on with unrelaxing fidelity, and when a meeting is held in the interest of the Order they respond with becoming promptness and enthusiasm. Such men are the mainstay of a Lodge.

At the union meeting held in New York in June last, a number of excellent addresses were delivered, notably those of D. W. J. Mahoney, of Adopted Daughter Lodge, No. 3, and Bro. C. A. Wilson of Washington Lodge, No. 13, which were listened to with special attention and enthusiastically applauded.

At the union picnic at Portage City, we had the pleasure of meeting our old friend, Mat Turney, who is now a member of No. 71, at Oneonta, N. Y. Mat was a delegate at the Minneapolis convention and made many warm and lasting friends there. We were pleased to learn that Bro. Turney is getting along well on the road and otherwise doing well.

THERE is not, in our entire Brotherhood, a more earnest or devoted member than Bro. Eugene S. Ailing, of Elm City Lodge, No. 284, New Haven, Conn. He has been Secretary of that Lodge since it was instituted, and the Grand Lodge records and files bear eloquent testimony to his ability and fidelity in that capacity. He is now running an engine, but has lost none of his interest in the Order. The *Magazine* most heartily wishes him success.

At Jersey City, N. J., not long since, we had the pleasure of meeting Bro. Peter Ruffer, who was a charter member of the original Deer Park Lodge, No. 1, at Port Jervis, N. Y., and hence became a member of the Order at its very beginning, on December 1, 1873. Bro. Ruffer is now a stalwart member of Adopted Daughter Lodge, No. 3, and his interest in the Order is unabated.

HOWARD TRUMBULL, of No. 82, has sold the steamer Clyde to the Yellowstone National Park Association, and taken her from Lake Minnetonka to the beautiful sea in the park. Bro. Trumbull goes out as captain on a liberal salary. He is in every way competent to fill the bill, as he has for years been one of the best engineers, pilot and captains on Minnesota's great summer resort.

Two of the most genial, whole-souled, rollicking good fellows we have ever met are Bros. D. W. J. Mahoney and J. H. Voorhis, of Adopted daughter Lodge, No. 3, of Jersey City, N. J. Their home, with Mr. and Mrs. Spear, most charming people, is a conservatory of music, song and joy. All the refining elegance and influence of domesticity are felt here and the exclamation is, "A happy home." We were the guests of these good people while in Jersey City, and enjoyed the boundless hospitalities and felicities of their home, and no words of ours are adequate to express our appreciation of the thousand kindnesses of which we were the recipients. The happy home on the avenue arouses the most pleasing recollections.

The picnic season has been one of many delightful reunions of members of the B. of L. F. Among them, the following from the Boston *Herald* shows what a gay time was had by Boston Lodge, No. 57. The *Herald* says:

Boston Lodge, No. 57, Brotherhood of Locomotive Firemen, held its annual picnic at Melville Garden yesterday. Many ladies and children attended the party numbering 300. The officers of the Lodge are: F. F. Derby, Master; A. W. Spurr, Treasurer and Chairman of the committee on picnic; T. H. Haines, Secretary; H. E. Stevens, Past Master. Brother firemen were present from Providence, Fitchburg, Portland, Concord, N. H., and Salem; also about forty members of the Steam Railroad Men's Protective Union and the following officers thereof: Grand President C. H. Trenholm, Grand Secretary and Treasurer William Burns, Grand Vice-President T. H. Haines; also several members of the Brotherhood of Railway Brakemen, and of the Brotherhood of Locomotive Engineers. The entire party partook of a clambake dinner, and enjoyed the music of the concert by the Lynn brass band.

Boston Lodge, No. 57, is one of the best that floats the banner of the Brotherhood, and we can readily see that the annual picnic, under its auspices, was a royal affair.

The banqueting board was never more enjoyed than at Washington, Ind., at the close of our meeting with the members of Tried and True Lodge, No. 361. The host, though not apprised of the affair but an hour in advance, did himself great credit, and the heavily laden tables spoke eloquently of his abilities as a caterer. The boys (ourselves included) were equal to the occasion and responded to the programme with alacrity. All the good things of the season were included in the bill of fare, to which ample justice was done by the guests. We cherish the most pleasant recollections of the occasion.

Helping a Brother.

A most touching illustration of the charity practiced by our organization was brought to light at Jersey city not long since. Bro. J. West, a member of Buffalo Lodge, No. 12, had gone there in search of employment. His wife was taken ill and shortly afterward died. Here was the unfortunate brother in a most distressing situation, among strangers in a strange land and no one to whom he could turn for assistance. Naturally modest, he refrained from making known his needs, but the members of Adopted Daughter Lodge, No. 3 were apprised of it and promptly they dispatched a committee to investigate the matter. This done arrangements were made for the funeral and the deceased was given a christian burial. A beautiful pillow of flowers was placed upon the grave. The pall bearers were selected from the membership and every detail of the arrangements was looked after by the Lodge. Words of consolation were spoken to the afflicted brother and all that fraternal sympathy could suggest for his relief was promptly and cheerfully done. Bro. West is one of the most worthy members of No. 12, and fully appreciates the magnanimous treatment he received at the hands of the members of Adopted Daughter Lodge, No. 3, as do the members of his Lodge, who acknowledged their obligations for the favor with expressions of profound gratitude. Such examples of brotherly love and devotion dignify and beautify our order and win for it universal esteem.

Meeting at Washington, Ind.

On Wednesday, July 17th, we had the pleasure of attending a meeting at Washington, Ind., under the auspices of Tried and True Lodge, No. 361. In the afternoon a closed meeting was held which was fruitful of much good. The more important questions of the day were discussed and at the close of the meeting the verdict was universal that the afternoon had been profitably spent. In the evening an open meeting was held at Masonic Hall which was well attended. The meeting was called to order by Bro. James Gabriel, who presented in a neatly worded introduction His Honor, Mayor Ogden. Though he had but a few moments notice of the meeting, Mayor Ogden delivered a most appropriate and felicitous address which was received with every demonstration of approval. We then had the pleasure of addressing the audience, which was a most intelligent and appreciative one, consisting largely of railroad men and laboring men generally. A number of business men were in attendance who manifested a generous appreciation of the order and its purposes.

Since the removal of the O & M shops to Washington that city has grown rapidly. The people are enterprising and active and in all regards abreast of the times.

E. J. RAUCH, Esq., Road Foreman of Engines, of the Elevated Railway, has our thanks for numerous courtesies we enjoyed at his hands while in the great metropolis.

Brother John C. Hess.

Whatever else may happen during our connection with the *Firemen's Magazine*, the time will not come when we shall cease to experience a thrill of pleasure at the recital of deeds of noble daring on the part of firemen and engineers to save lives that are in peril. Elsewhere we publish a communication from Pittsburgh which tells in simple phrase of the courageous deed of Bro. John C. Hess, Receiver of J. W. Walker Lodge, No. 381, Conemaugh, Pa. At this distance of time and space from the awful disaster that overtook the people living along the Conemaugh valley, it may be difficult for the readers of the *Magazine* throughout the country to comprehend the horrifying situation of the doomed valley when it was known that the dam in the mountain had given way, and that an annihilating deluge was thundering on its death-dealing and desolating mission. It was in such a situation that Brother Hess was placed, with only a minute to decide and act. He did not leave his engine and fly to the mountains for refuge. His watchword was to save life, though he perished. It was to sound the alarm along the valley of death. This he did. With the whistle of engine wide open, there was one ceaseless scream of warning to fly, and as a result, it is known that many hundreds of precious lives were spared from the grasp of the flood. All honor to such men. They dignify human nature and shed imperishable luster upon manhood. We rejoice with all men who follow the perilous calling of railroading that included in their ranks are men like Brother John C. Hess, who, when the demand is made, are equal to the emergency. We are told that Brother Hess is a modest man. Certainly, courageous, self-sacrificing men are always retiring. Brave men are never boastful; like charity, there is neither vanity nor unseemly anxiety for notoriety, but when a noble deed is to be done, when danger is to be confronted, when imperiled lives are to be saved, when forlorn hopes require a leader, then men like Brother Hess come to the front, and with clear heads, manly hearts and dauntless courage set examples, which in their influence elevate and dignify manhood.

We are under many obligations to Mrs. Henry B. Jones, editress of the *Brakemen's Journal*, for the hospitality of her home, so freely tendered during our visit to Washington, Ind. Mr. and Mrs. Jones are held in high esteem by the people of Washington, especially among railroad men. Mrs. Jones is deservedly popular as the result of her unrelaxing devotion to the interests of workmen, whose cause she has long since espoused with unquestioned earnestness and ability.

MR. J. H. BREWER, formerly a member of Lodge No. 238, has opened a hotel at Hot Springs, Ark., known as the Fisher House and located at 339 Park avenue. Mr. Brewer is a member of the B. of L. E. and would be pleased to have his old time friends give him a call when they visit the Hot Springs.

William T. Field.

We have on our table the *Daily Independent*, of Helena, Montana, in which we find a pleasant notice of Bro. William T. Field, Master of Custer Lodge, No. 191, Livingston, Montana. Bro. Field has been elected a member of the Montana Constitutional Convention, a position of great responsibility, for which he is well equipped. Speaking of Bro. Field, the *Independent* says: "He became a member of the Brotherhood of Locomotive Firemen, and in 1880 attended the annual convention of the Brotherhood of the United States as delegate, an honor which has been conferred upon him every year since, last year representing Montana at the convention held in Atlanta, Ga. Mr. Field united with the Knights of Labor five years ago, and at present is the Statistician of the Order for District No. 88, comprising the whole of Montana. He has represented the Order at three annual conventions of the General Assembly of the Knights of Labor. For the last six years Mr. Field has been employed as a railway engineer on the Livingston division of the Northern Pacific line." There is use in all legislative bodies for representatives of labor; practical men who comprehend the situation and who will guard well the interests of working men, both in organic and statutory laws.

The Nathan Manufacturing Company.

At a meeting of Just in Time Lodge No. 149, held June 23, 1889, the Nathan Manufacturing Company, of New York, made the Lodge present of two models, one of a lubricator, and one of an injector. It is needless to say that the members of 149 are justly appreciative of the valuable models so kindly bestowed, and which were presented to the Lodge by Mr. E. J. Rauch, who is never weary in promoting the welfare of the men of the foot-board. Such tokens of friendship are of great value to locomotive firemen, as they enable them, in the Lodge room, to intelligently discuss practical questions relating to their work.

WHILE traveling on the Erie Railway, not long ago, we had the pleasure of meeting Joseph Bailey, Esq., a passenger conductor between Susquehanna and Hornellsville. Mr. Bailey is a genial and companionable gentleman, who is ever ready to recognize a railroad man in good standing, no matter what department he may be employed in, and, as a consequence, he is immensely popular all along the line. The lodge of B. R. B. at Hornellsville is named in honor of Mr. Bailey, a tribute of respect and esteem worthily bestowed.

THE sympathy of the Brotherhood is extended to Bro. C. W. Cheeseman, of Connecting Link Lodge, No. 25, Boone, Iowa, from whom death has taken a loved and loving wife. The deceased, Dorcas M. Cheeseman, was 37 years of age; she possessed those virtues which adorn and beautify womanhood, and many friends who knew her sincerely mourn her loss.

SELECTIONS.

SEPTEMBER, 1889.

SOLD TO STRANGERS.

The worn-out blinds hang loosely,
The paint is nearly gone;
The creaking gate swings idly,
The old place looks forlorn;
The myrtle mound is grass-grown,
That blossomed years ago.
And one by one have vanished
The flowers I used to know.

The ancient tree whose cherries
Rejoiced my childish heart
Stands leafless, grim and groaning;
The arbor's dropped apart—
That arbor in the garden
Where honeysuckle twined;
The once broad path that led there
Is now but ill defined.

The dear, quaint old mansion,
It held our kith and kin
For eighty years and over,
Till they were gathered in.
And now it goes to strangers;
Its glories are all fled
Since those who built the hearth fire
Are numbered with the dead.

While we who loved it fondly
Must give a parting sigh,
A farewell look, and sadly
Forever pass it by.
And still the fragrant lilies
May bloom beside the door,
But strangers' footsteps echo
Across the oaken floor.

HATS OFF TO CORBIN !

THE TYRANNICAL RULE OF CORPORATE POWER.

It is Cowardly to Whine About the Oppression of
Capital When We Have the Remedy
in Our Own Hands.

Journal of United Labor.

Fourteen years ago the employes of the Philadelphia and Reading Company were threatened with Molly McGuireism as the result of the agitation for and the adoption of the new Constitution of Pennsylvania. Public sentiment was being aroused in favor of public control of corporations; public corporations were at their wits' end to ward off the inevitable. The Reading Company manufactured the Molly McGuire, and, with the aid of its McParlans and some "who wore the livery of heaven to serve the devil in," he was made to do double duty; remove some obnoxious foreman whom the company did not care about discharging and to create a false opinion of the workmen generally. The lesson of the Molly McGuire outrages was: "Don't vest too much power in the people through the Constitution; they cannot safely

guide the ship of State. Vest more power in corporations and they will protect the state." These were the reasons why the world was made to believe that the Molly McGuire was the incarnation of hell itself. The Molly was the legitimate offspring of the policy of insubordination to constitutional authority which the Reading Company pursued then and continues to pursue to-day. Itself an outlaw, it must, as a shield, have lesser ones to direct public attention to, and dupes were not wanting to fall into the trap, and a few foremen and fellow-workmen were assassinated, while the power behind the throne sent out its orders to still further oppress the workmen that they might be driven to deeds of greater desperation. Many Molly McGuires were hanged. Press and Pulpit hounded the poor ignorant men to the scaffold, but maintained a cowardly silence on two evils; the tyrannical rule of corporate power and the rule of whiskey. The Reading Company paid its detectives to go among workmen, enter their societies and instigate crime. The whiskey-seller, on the other hand, piled his damnable trade and benumbed the senses of those who did the deeds of darkness until they were aroused by the touch of the hangman's rope. For every crime committed in those dark days the Reading officials stand accountable in the sight of heaven, yet other and lesser criminals swung from the gibbet in atonement. But the end was attained and silence concerning violations of the Constitution reigned throughout the commonwealth of Pennsylvania. He would be a brave man, indeed, who would dare raise his voice against the encroachments of the corporations of 1876. In that year we celebrated the hundredth anniversary of the rule of the people by strangling a few misguided men who revolted against the rule of monopoly, not wisely nor yet too well. Time rolled on, organization began to revive, and possibly some foolish acts were perpetrated by some of the organized ones, but their very worst things could not, do not, cannot equal the treasonable actions of the officials of the Reading Company. A strike was necessary, and in 1887 the men were warned that Austin Corbin and a few others (the number I am not certain of) wanted to control the stock of the Reading, and that they would in all probability drive to a strike if not careful. The strike came. It was carefully and deliberately planned by the officials of the Reading Company. When the proper time arrived Austin Corbin gave his consent and it was allowed to proceed. The rest is known to the public, or will be by the time we get through with him. In defiance of constitutional law the Reading Company continues to do two kinds of business when the Constitution of Pennsylvania expressly forbids it. Mr. Corbin goes still further, buys up the Reading Iron Works and then tells the men that he will have no more organization among workmen. That is one of the best acts of Austin Corbin's life, and if he will only follow it up by telling the men that they will have to vote the ticket he votes in future,

go to the church he prescribes, and sneeze when he takes snuff, he will be doing a greater service to the workingmen. Mr. Corbin is justified in believing that he has the right to say what the men in his employ may do in the hours that they are not at work; the men by their actions for the last fourteen years have given him the right to think that this state is his to do as he pleases with. If he can get still further and drive the men to murder and assassination, as his predecessors did, he will be enabled to throw more dust in the eyes of a sleepy commonwealth which allows its most valuable franchises to be controlled and wasted by men who do not reside in the state, who do not care for the state, and whose every act is one of violation of the Constitution of the state. Shout for "eight hours" if you will, men; but what are your short hours if, during the time you are not at work, Austin Corbin shall dictate what you shall not do? For fourteen years the men of Pennsylvania have allowed the state they are in duty bound to protect, to be plundered of its richest possessions in order that the tribe of Corbin may fatten on the spoils, and they are now being repaid with interest. Will you, who do not work for him, stand by and see this work continue until your own wrists are fastened together, or will you do what you have too long delayed? Look at the legislative history of Pennsylvania for the past fourteen years and you will see one dark record of idleness and crime. You will see men who were sent to the Legislature voting as the corporations told them how while in the Assembly room, and drinking the wine their corruption bought in the brothels of Harrisburg in the evenings. Now and then you will see the introduction and passage of some Labor Bill which is not worth the paper wasted upon it. Yes, take every labor measure that has passed the Legislature of Pennsylvania for the last fourteen years and it will not afford the workmen a particle of protection, if the corporations of the state will it otherwise. At each succeeding election you will go to the polls and vote for the same men as before, without questioning their past or inquiring into their future. Don't blame Austin Corbin for what he is doing. Be men, and take the responsibility upon your own shoulders. It is cowardly to whine about the oppressions of capital when we have the remedy in our own hands. It is worse than cowardly to know how to do a thing and not do it. What is the remedy? I answer: There is no remedy while the state of Pennsylvania is cursed with the presence of millions of Democratic and Republican workingmen who do not realize that they should be citizens, free-men, patriots, before being partisans. What will you do? I ask. How will you remedy the evil short of anarchy and revolution? I answer: Through a wise, judicious use of the ballot. Right here let me say to you that the man who now hints at deeds of violence as a remedy is a traitor to the state. If, after all that has been told to you, you do not know how to apply the proper remedy, then your cause is hopeless. We

cannot compel obedience to the Constitution of Pennsylvania while men can be brow-beaten at the polls and compelled to vote as the corporation boss, the political boss and the rum boss dictate. Before we can move hand or foot in the way of reform we must throw every safeguard around the ballot-box. No rifles or bayonets, bombs or other weapons of cowards or weaklings will be necessary. What we require is a **SECRET BALLOT**, one by which the partially free man may become in truth a freeman. How many citizens of Pennsylvania will raise their hands with mine when they read this and pledge themselves not to ask for another measure of reform of the coming session of the Legislature except the passage of some such system of ballot reform as the Australian system? How many will pledge themselves not to vote for any man until he pledges himself to stand by the people and vote for such a measure? How many will step outside of party ranks and say:

I will not vote for any man who will not pledge himself to secure the passage of the Australian or a similar system of voting in Pennsylvania. I will not vote for him even though he gives such a pledge until he also pledges himself not to enter a caucus on this measure, either of party or clique. I will pledge myself to demand of the man I vote for that he meet with the people in mass meeting assembled whenever he may be required to do so and explain his work and vote.

Men of Pennsylvania, you have trifled too long; it is time to work, and your duty is plain. Take this question up in your assemblies and act upon it. Allow no fault-finding, grumbling member to stop you because it is a political question. It is a political question, and one that concerns your "daily bread," that bread for which you pray, but for which you have to work as slaves or do without. I do not ask you to stop praying for bread, but I would ask you to work for it and vote for it in a different manner from that in which you have been working and voting. How many will act? How many will vote as I suggest? How many will cease to tie the American citizen's highest prerogative to the chariot wheels of party and caucus, that they may forge to the head of the procession and there do duty as becomes Americans who know how to wield the ballot? Let me here from you through the *Journal*.

T. V. POWDERLY,
General Master Workman.

QUITE A CONTAGION—Mrs. Malapropos—"How is your papa getting along, my dear?"

Miss Precise—"Oh, he's convalescent."

Mrs. Malapropos—"My, Oh my! How unfortunate he is, to be sure! First he had newmoney then plumbago, and now convalescent."

Miss Precise—"How do you feel, Mrs. Malapropos?"

Mrs. Malapropos—"The doctor says I've got two buckles on my lungs, and I'm going down to the druggist's now to get some Brown's Bronchial Breeches for my henflewendways."

AT EVEN.

Bury her at even
That the stars may shine
Soon above her,
And the dew of twilight cover;
Bury her at even,
Ye that love her.

Bury her at even;
At the shut of flowers
Softly take her:
They will lie beside nor wake her.
Bury her at even,
At the shut of flowers.

Bury her at even,
In the wind's decline,
Night receive her
Where no noise may ever grieve her!
Bury her at even,
And then leave her.

Michael Field in the Academy.

OBESITY AMONG ENGINEERS.

G. W. Furey, M. D., in Phila. Medical Bulletin.

One feature of the railroad man's life has impressed itself upon my attention as a matter of direct observation. Nowhere have I been able to read or hear of any allusion to it. I refer to the constancy with which we find obesity among engineers who have been on duty as such for any considerable time. That this is a fact characteristic of locomotive engineers as compared with all other grades of railroad men, led me to wonder why such is the case. Obtaining no data, nor finding any literature upon the subject from the sources attempted, I at last concluded to resort to our worthy friend, General Principles, and *en persona*, ran out lines of discovery as well as the troubled wits of a country physician would permit.

My first step, to insure my premises, was to interview members of the calling in question. Subjoined will appear the story of each as they were spoken to. No selection was made, and no name discarded to suit the proposition;

NAME	Age When Became Engineer		Present Age.		Weight When Became Engineer		Present Weight.	
C. C. Ray	24	31	180	220				
Thomas Attig	24	40	170	210				
Samuel Cherry	20	53	140	240				
Robert Bergoon	28	44	155	240				
Harry Laylen	23	43	155	196				
Joseph Keefer	24	43	160	210				
James Keenan	29	47	170	240				
I. C. Nyhart	27	32	150	150				
J. L. Cherry	26	32	136	145				
O. H. Yeager	28	33	155	165				
John Krohn	25	37	155	185				
Wayne Simcox	30	32	180	185				
M. G. Smith	31	36	180	220				
M. L. Deihl	32	40	190	220				
S. A. Kaufman	27	30	160	168				
T. Conser	25	42	165	175				
M. Malhi	29	36	137	180				
T. Hewitt	34	42	180	180				
	23	27	125	156				

This table gives us an average time engaged as

an engineer by each man of about eleven and one-half years, during which each has gained in weight an average of thirty-one pounds. Comparing this with the conditions obtaining with the same men only a few years previously, when they were firemen, and also with others who, as firemen, at the present, have those previously filled places in charge, working day by day and trip by trip in the same cabs, eating and sleeping and living in the same manner, we observe a marked difference.

On the part of the fireman, if there is any change in weight, we find him decreasing in weight. In fact, upon a fair comparison with all other vocations among men, we conclude that there is no other class wherein the members are equally temperate, industrious and healthy, who so uniformly take on obesity. Now I would ask why is this true? I hesitate to call attention to the fact alone, and consequently will not undertake to propound a *rationale*; but there must exist a physiological or perhaps pathological cause, and I suspect that, whatever it be, it is more or less associated with and controlled by a peculiar condition, of a mechanical nature, which has occurred to me. I refer to the engineer being subjected to the motion of his engine while he is in a sitting position.

I am constrained, however, to wonder if this fact of his receiving the continuous jar and motion of the engine directly upon the lower part of the trunk, unrelieved by nature's springs, the legs, may not affect the spinal nerves, as well as all the nerve-centers, in some occult manner resulting in arrested tissue respiration. Would the conclusion of this event be interference with the usual combustion of the carbo-hydrates, and, while digestion and emulsification were not correspondingly impeded, could the fats, by some characteristic centrifugal impulse conformable with the vibro-rotary motion of the engine, arrive at their destination and be retained? Have the essences of nutrition been polarized by molecular agitation, due to the peculiar manner in which the motion is applied, and thus arrested?

A DAMPENING EFFECT.**Texas Sayings.**

A few years since the Rev. G—— was in B., South Carolina, on a visit, and while there was invited to preach in a negro church. As the Sabbath approached it occurred to him that it might be a good idea to ask the advice of the colored pastor as to the subject of discourse most likely to interest his congregation. Accordingly he sought him and propounded the query. "Well, sah, replied his colored colleague, meditatively, 'mos' eny subjec' sult 'em, sah; my congregation ain't so mighty hard to satisfy. Dey likes zortin mos'y, sah; but mos' enyting 'll do—mos' enyting. Howsomeber,"—and he paused a moment hesitatingly and lowered his voice in earnest caution—"howsomeber, I tink I wouldn't tech on de ten commandments, sah. I did it once, sah, and it had—it seemed to have—a mighty damp'nin' effect, sah."

A CHILD'S PRAYER.

How It Vindicated the Character of a Mother—A Touching Scene.

There arrived in this city from San Francisco yesterday morning, says a Fresno (Cal.) paper, a young man accompanied by a middle-aged woman and two children. They went to the Grand Central Hotel, where they registered as Duliss Bayswater, sister and children, and were assigned rooms. During the day the party went into the country and returned toward evening, accompanied by William Chrisman, who for the past two years has been foreman for Dr. Eshelman. The two young men were around the hotel together in the evening, and about 8 o'clock went up to the room of Mrs. Bayswater, who was registered as the sister of the younger man.

About 11 o'clock the guests at the hotel were aroused by a terrible noise in the lady's room, and it was discovered that the brothers were fighting, for brothers the two young men proved to be. One of them, the elder, was taken to jail and the younger one was allowed to remain at the hotel.

Complaints were filed against both men for disturbing the peace before Recorder Prince, and this morning at 10 o'clock they had their trial. The testimony developed a sad story of domestic life, and in brief it was as follows: The names of the young men are William and Duliss Chrisman and that of the woman Bayswater. Some eight years ago William Chrisman met her and fell in love with her. She was a grass widow, her divorced husband being alive, and when Chrisman and Mrs. Bayswater went to get married they told their story, being Catholics, and the priest refused to marry them, Catholics not allowing the marriage of a divorced man or woman. This apparently made no difference to Mrs. Bayswater and Chrisman, and they went to living together as man and wife. She bore him two children, both girls, and they lived happily together until two years ago, when Chrisman left her.

Mrs. Bayswater keeps a tavern at 310 Townsend street, San Francisco. After leaving her Chrisman went to work for Dr. Eshelman and has continued in his employ. On one or two occasions the woman has come here, begging Chrisman to go back to her, and this was the purpose of this visit, the brother accompanying her to beg his brother to do right and return to his children. In a dispute which arose the lie was passed and a fight ensued.

In court to-day William Chrisman seemed to be bitter against his brother and the mother of his children. He accused her of keeping a dive and she denied it vehemently, retorting with other accusations. This was kept up until finally the mother said, in answer to some charge made by Chrisman: "Don't believe him, Judge. I have raised my children as they should be."

This was all Recorder Prince wanted, and he said, "I'll test it, madam," and turning to the younger girl, a little tot not more than three years old, he said: "Can you say your prayers?"

Then ensued a most touching scene. The little girl without a word climbed from her chair, knelt on the floor of the court room, with the policemen, spectators, judge and her father and mother around her, and, folding her tiny hands and lifting her eyes to heaven, she made the grandest defense of a mother's word possible. Slowly, but distinctly, and without a tremor in her voice, the innocent little darling, born with the stain of shame upon her and discarded by her father, lisped in childish accents the Lord's Prayer.

As she proceeded, utterly oblivious to her surroundings and thinking only of him who said, "Suffer little children to come unto me, and forbid them not." As she uttered that prayer which many in the room had not heard for years, strong men bowed their heads and sobbed aloud. Finishing her prayer, she added, "God bless papa and mamma and Uncle Duliss. Amen," and rose from her knees.

The case was settled, and had William Chrisman sworn a thousand oaths that the woman was bad he would have been disbelieved. It was several minutes before any one spoke, and then the recorder fined the two brothers \$15 each and dismissed the court.

SMALLNESS OF THE WORLD.

Youth's Companion.

There are experiences in the lives of most of us that bring the conviction that the world is but a small place after all. An incident related by the author of "Coral Lands" is to this very point:

"Our schooner was making the best of a very light wind through a channel dividing two large-sized atolls, which shall be nameless in this book, when a rowboat came alongside, steered by a youngish-looking white man, of course as brown as a berry, and clad in shirt and trousers only.

"Telling the boys to keep alongside, he came up our side, and after purchasing some tobacco and other odds and ends, for he was a local trader, I asked him to accept the hospitality of our cabin over some sardines and biscuit.

"He suddenly turned round on me and asked if I had seen the So-and-so's lately, mentioning the names of old schoolfellows of mine and most intimate friends. He had recognized his old classmate, but I failed at first sight to recognize in the bronzed, stockingless walf of the Pacific, trading in a most remote cluster of atolls, the same fellow who, fifteen years before, used to help me considerably over the correct rendering of some puzzling Greek authors."

THE Sioux Reservation in Dakota now embraces about 21,000,000 acres of land, of which the law passed at the last session of Congress contemplates opening to settlement between 9,000,000 and 11,000,000 acres, or nearly one half the whole. On the reservation there are about 24,000 Indians belonging to various tribes and grouped about the different agencies.

THE OLD MAN'S DAUGHTER.

She Had Come to a Great City and Perhaps Gone Astray.
Chicago Herald.

"Have you seen my daughter, sir? Have you seen my daughter?"

The speaker was an old man whose bent form was plainly clad and whose presence betokened the countryman, says the *Minneapolis Journal*. His voice was tremulous from age and anxiety, and his eyes gave out a vacant stare that told of a deranged mind.

"My daughter came here last fall to work in one of them big stores. She was such a pretty lass, with blue eyes and curly brown hair, and a merry laugh. She was the apple of her old father's eye and the joy and pride of his heart. You see she'd been to town to school for three winters, and when she came back to the old farm she wasn't contented no longer. It seemed so dull and stupid like to her. Me and her mother couldn't bear to see her unhappy. She was our only child, and when she begged us to let her come to the city and earn her living we gave her our blessing and let her go, though it almost broke our hearts to lose even for a short time our one ewe lamb. But she was so happy over the prospect of going. She was going to work so hard and save money to help pay the mortgage on the farm; and after New Year's she was coming home for a long, long visit. And so she went. She had a girl friend working in one of the big stores who got her a place. We used to hear from her very often at first. She was getting along so well and everybody was kind to her. After awhile she didn't write so often and the tears would come to her old mother's eyes when I came home from the postoffice with no word from our child. Finally she stopped writing altogether. It broke her mother's heart. Last week I laid her body in the churchyard lot—the good old wife with whom I had been happy for forty years. Oh, I am sure that if daughter had only known she would have come home. I thought she must be sick, with nobody to look after her. And so I have come to town to hunt her up. You're sure you haven't seen her, are you? I'd know her the minute I set eyes on her. Well, I must be goin' along. I've got to find her and take her home."

And the old man went up the crowded street gazing earnestly at the passers-by; and occasionally he would stop some hurried pedestrian with: "You haven't seen my daughter, have you?"

It is only fifteen years ago since natural gas was first used as a fuel, yet to-day there is required to pipe it 27,350 miles of mains. In Pittsburgh alone 500 miles supply 42,688 private houses, 40 iron mills, 38 glass works, 83 foundries and machine shops, and 422 miscellaneous industrial establishments. An idea of its value as fuel can best be obtained when the value of 7,000,000 tons of coal is estimated, as it is asserted that this amount of coal is annually displaced by natural gas.

STORAGE OF LIFE.

Youth's Companion.

Within each ton of coal was stored, long before the creation of man, a definite amount of heat, which, by the chemical process of combustion, may be made available for man's use. A barrel of wheat contains a fixed amount of food. Electricity can now be stored and bought and sold in measured quantity.

Each person has a definite amount of stored life, normally equal to about 100 years; but, in most cases, our ancestors have squandered much that should have come to us, and we ourselves waste not a little that we have actually inherited.

This wasting of our store of life is as serious a thing as it is common. It may be done thoughtlessly or ignorantly, but the waste is just as irretrievable. Tens of thousands of children die annually, and as many more survive, with a sadly wasted vitality, simply because their mothers do not exercise enough care in the matter of food clothing, pure air and sunshine.

Our schools waste this store by drawing too largely on the brain and nerves of their pupils through the competitive systems, the worry of public examinations; through exacting the same tasks of the bright and of the dull, and through lack of adequate and persistent attention to the sanitary condition of the school rooms.

Some parents allow their children to waste their supply of nervous force by the incessant reading of sensational books, or by frequent attendance at exciting evening parties, and some by not insisting on regular and sufficient sleep.

Women waste it by overwork and worry in their homes, and it is a very rapid waste. Gay young ladies and fast young men waste it at a fearful rate in their rounds of pleasure. Only next is the waste of high living conjoined with excessive devotion to business.

Of all the professions the medical wastes the life-store most rapidly by irregular and broken sleep, night exposure and the constant drain on the sympathies and the nervous system. It seems a pity that those whose great work is to save and prolong the life of others should have to do it at the expense of their own.

ADVANTAGES AND DISADVANTAGES.

When Washington was President
As cold as any icicle,
He never on a railroad went,
And never rode a bicycle.

He read by no electric lamp,
Nor heard about the Yellowstone,
He never licked a postage stamp,
And never saw a telephone.

His trousers ended at the knees,
By wire he could not send a dispatch,
He filled his lamp with whale oil grease,
And never had a match to scratch.

But in these days it's come to pass,
All work is with such dashing done—
We've all these things; but then, alas—
We seem to have no Washington.

—Robert J. Burdette.

A SERIOUS MATTER.

An Illinois Judge Who Regarded a Hanging in That Light.

Luak's Eighty Years of Illinois Politics.

The judiciary of Illinois has ever been held in high esteem. Nowhere is its history marred with the charge of corruption, and this has given it the universal respect and confidence of the people. A great many anecdotes are related regarding the early courts, but the following, from "Ford's History," will serve to amuse the reader, and at the same time show the wide contrast between the practice of the courts then and now:

"The judges in early times in Illinois were gentlemen of considerable learning. In general, they were adverse to deciding questions of law. They never gave instructions to a jury unless expressly called for, and then only on the points of law raised by counsel asking for them. I knew one judge who, when asked for instructions, would rub his head and the side of his face with his hand, as if perplexed, and say to the lawyers: 'Why, gentlemen, the jury understand the case; they need no instructions; no doubt they will do justice between the parties.' This same judge presided at a court in which a man named Green was convicted of murder, and it became his unpleasant duty to pronounce sentence of death upon him. He called the prisoner before him and said to him: 'Mr. Green, the jury in their verdict say you are guilty of murder, and the law says you are to be hung. Now, I want you and all your friends down on Indian creek to know that it is not I who condemn you, but it is the jury and the law. Mr. Green, the law allows you time for preparation, and so the court wants to know what time you would like to be hung?' To this the prisoner replied: 'May it please the court, I am ready at any time; those who kill the body have no power to kill the soul; my preparation is made and I am ready to suffer at any time the court may appoint.' The judge then said: 'Mr. Green, you must know that it is a very serious matter to be hung; it cannot happen to a man more than once in his life, and you had better take all the time you can get; the court will give you until this day four weeks. Mr. Clerk, look at the almanac and see whether this day four weeks comes on Sunday.' The clerk looked at the almanac, as directed, and reported that that day four weeks came on Thursday. The judge then said: 'Mr. Green, the court gives you until this day four weeks, at which time you are to be hung.' The case was prosecuted by James Turney, the attorney-general of the state, who here interposed and said: 'May it please the court, on solemn occasions like the present, when the life of a human being is to be sentenced away for crime by an earthly tribunal it is usual and proper for courts to pronounce a formal sentence, in which the leading features of the crime shall be brought to the recollection of the prisoner, a sense of his guilt impressed upon his conscience, and in which the prisoner should be duly exhorted to repentance and warned against

the judgment in the world to come.' To this the judge replied: 'O, Mr. Turney, Mr. Green understands the whole matter as well as if I had preached to him a month. He knows he has got to be hung this day four weeks. You understand it in that way. Mr. Green, do you not?' 'Yes,' said the prisoner, upon which the judge ordered him to be remanded to jail, and the court then adjourned."

TEMPTATION TO STEAL.

N. Y. Metropolitan.

An honest man can lose himself so completely in New York that he will never be found; but a criminal, never. Four years ago a bank teller ran away with a lot of money. For reasons that cannot be told, he returned, and although under police *espionage*, a certain number of his friends clung to him loyally. His appearance in one of the hotels the other night set a group of men talking. One of them was an official in a large metropolitan bank, and he said apropos of defaulting cashiers and thieving bank tellers: "It is a wonder there are not more of them. I know of a teller who, to-day had more than a million of dollars on his tray, and much of the amount consisted of packages of thousand dollar bills. He has been in service for thirty odd years and doesn't look forward to rapid promotion, yet he could have easily extracted a dozen or two of the packages before him, put the remainder in the safe, taken the six o'clock train for Canada, and been safely concealed there long before the bank opened for business in the morning. Why men do not steal oftener, under such circumstances as these is a mystery. There is one thing, however, worth bearing in mind: If we had a closer communion with the Dominion even in the matter of legal reciprocity, fewer facilities would be offered for the screening of crime and consequently there would be more enforced honesty among bank clerks. When a man has such an open invitation to escape, there is an inducement to steal."

IT STUCK HIM.

Peck's Sun.

"Mr. Affible, I have looked over your expense account," said the head of the house, peering over his glasses at his traveling salesman, "and there is one item here I do not understand. It is mucklage, \$118. What does that mean?"

"It means," said the salesman, who had had a good week's business and was correspondingly reckless, "it means that is where you get stuck."

SARAH BERNHARDT'S new coffin was shipped from Paris to England recently, where she goes to play an engagement of several weeks. The last coffin she had was seized some time ago, with other personal effects, by relentless creditors. The new coffin is daintily lined with silk, and at the head has a soft little pillow trimmed with Valenciennes lace. It is Sarah's grim humor, sometimes, to sleep in her coffin.

OUR HEROES.

Now that we've scattered the flowers of May
Over the graves of the blue and gray—
Over the graves where the women weep,
Over the mounds where the heroes sleep—
Now let us turn to the graves of those
Who have lived and died in their overclothes.

Are they not heroes; have they not died
Under their engines, side by side?
Have they not stood by the throttle and brake
And gone down to death for their passenger's
sake?

Calm, undisturbed be the peaceful repose
Of the men who have died in their overclothes.

We would not take from the soldier's grave,
Not even the blades of grass that wave,
Nor would we ask you to hand us down
A single star from the soldier's crown;
All honor to them—but forget not those
Who have lived and died in their overclothes.

When the moon's cold rays grow dim and pale
And the lightning leaps o'er the glistening rail,
When the sharp sleet furrows each eager face,
As over the mountains and hills they chase,
Ah! dreary, indeed, are the battles of those
Who have fought and fell in their overclothes!

T'would be sweet to know when we're laid to
rest,
With our hands folded silently over our breast,
That a woman would come to our grave once a
year
Bringing wreathes of flowers; that a woman's
tear
Would dampen the dust on the grave of those
Who have dared to die in their overclothes.

As time flies on with a restless wing,
And of noble knight the poets sing,
We shall tell in our feeble way
Of the good they have done, as we look on the
clay,
On the tear and storm stained faces of those
Who have gone down to death in their over-
clothes.

—The Frog.

THE EIGHT-HOUR MOVEMENT.

Indianapolis Journal.

The eight-hour movement is growing in dignity and influence, and there are indications that it possesses staying qualities. The strongest social movements are those which spring from natural conditions, which appeal to reason instead of passion, and which, small and circumscribed at first, extend their scope and influence by natural and gradual growth. It looks very much as if the eight-hour movement might be one of these.

The proposed reduction of the hours of labor involves no novel principle or new departure. They have been reduced before. It has not been a great while since the legal day's labor in Great Britain and the United States was twelve and thirteen hours. The first reduction was to eleven, and this was followed, after long agitation and discussion, to ten. The arguments and conditions that brought about a reduction from twelve to ten hours are now working in favor of a reduction to eight hours, and it remains to be seen if they will not have a like result.

The important feature of the agitation, and one that all honest and intelligent men must recognize, is that social conditions and economic laws have undergone a great change during the last generation, and are still in a transition state.

The laws of production have changed very greatly and are likely to undergo further change. The increase of labor-saving machinery and the progress of applied science have multiplied the productive power of labor to an enormous degree. It has worked a radical change in the labor world and in the condition of all labor problems. The world can produce more in eight hours now than it could in ten hours twenty years ago. It can produce more in ten hours than it can consume in the other fourteen with Sunday thrown in. Is it worth while to keep up that rate of production? The inventive power cannot be restrained and there is no reason why it should be, but it should be made to conduce to the comfort and welfare of mankind rather than to the mere increase of production and wealth. If, with the aid of machinery and science, the world can produce all it needs in eight hours of daily toil, why should it labor more? It cannot safely be asserted that the change would materially disturb the industrial world or imperil any interest, since the experience of the reduction from twelve to ten hours proves the contrary. On the other hand, the decided improvement in the condition of wage-workers that has taken place since the reduction to ten hours, might follow a reduction to eight. These arguments, advanced with great earnestness by the supporters of the movement, are fortified by economic as well as sentimental reasons which commend them to candid and thoughtful consideration.

THOUGHTS OF THE DYING.

New York Ledger.

It is affirmed that a dying person in his last moments thinks of the chief events of his life. Persons resuscitated from drowning, epileptics with grave attacks, persons dying and already unconscious, but momentarily brought back to consciousness by ether injections to utter their last thoughts, all acknowledge that their last thoughts revert to momentous events of their lives. Such an ether injection revives once more the normal disposition of cerebral activity, already nearly extinguished, and it might be possible at this moment to learn of certain important events of the past life. Brown-Sequard mentions the remarkable fact that persons who, in consequence of grave cerebral affections, have been paralyzed for years, get back at once when dying their sensibility, mobility and intelligence. All such facts clearly show that at the moment of dissolution important changes take place, reacting upon the composition of the blood and the functions of the organs.

It is estimated that the aggregate productive area of the state of California is 78,000,000 acres, including arable and grazing, desert land which may be irrigated, and swamp and over-flowed lands which may be reclaimed. Of the remainder it is estimated that 20,000,000 acres consist of rugged, and, for the most part, heavily timbered mountains covered with valuable redwood, pine cedar, spruce and oak timber.

JAP MILLER.

Jap Miller down at Martinsville's the blamdest feller yit!
 When he starts in a-talkin' other folks is apt to quit—
 'Pears like that mouth o' his'n wuzn't made fer nothin' else
 But jes' to argify 'em down and gether in their peels.
 He'll talk you down on tariff; er he'll talk you down on tax,
 And prove the poor man pays 'em all—and them's about the facts!
 Religen, law er politics, prize fightin' er base ball—
 Jes' tetch Jap up a little and he'll post you 'bout 'em all.

And the comicallest feller ever tilted back a cheer
 And tuck a chaw tobacker kindo like he didn't keer.
 There's where the feller's stren'th lays—he's so common-like and plain,
 They haint no dude about old Jap, you bet you, nary grain!
 They 'lected him to council and it never turned his head.
 And didn't make no difference what anybody said—
 He didn't dress no finer, ner rag out in fancy clothes;
 But his voice in council meetin's was a turrer to his foes.

He's fer the pore man ever' time! and in the last campaign
 He stumped old Morgan county, through the sunshine and the rain,
 And helt the banner upwards from a-trailin' in the dust,
 And cut loose on monopolies and cuss'd and cuss'd and cuss'd!
 He'd tell some funny story ever' now and then, you know,
 Tel, blame it! it wuz better'n a jack-o'-lantern show.
 And I'd go funder yit, to-day, to hear old Jap orate
 Than any high-toned orator 'at ever stumped the state!

W'y, that-air blame Jap Miller, with his keen, surcastic fun,
 Has got more friends than any candidate 'at ever run
 Don't matter what his views is, when he states the same to you
 They allus coincide with your'n the same as two and two.
 You can't take issue with him—er at least they haint no sense.
 In startin' in to down him, so you better not commence—
 The best way's jes' to listen, like yer humble servant does,
 And jes' concede Jap Miller is the best man ever wuz!

—James Whitcomb Riley in the *Sunday Journal*.

SECRET RATE CUTTING.

Railway Service Gazette.

Some months since the *Railway Service Gazette* stated that Congress and President Cleveland would promptly second every suggestion of the Interstate Commerce Commission. The commission recommended that secret rate cutting and other evasions of the law be made offenses punishable with imprisonment in the State penitentiaries for terms not exceeding two years, or fines of \$5,000, or both fines and imprisonment at the discretion of the court, and that all reduc-

tions in published rates, fares, or charges shall only be made after three days' previous public notice. These suggestions were approved of by the Senate and the House of Representatives with a promptness rarely ever displayed in taking action in other matters, and President Cleveland at once approved the bill thus making it the law of the land. The secret rate cutters and the promoters of rate wars had best take warning in time, for henceforth no mercy will be shown them.

It is now published in nearly all the daily newspapers that presidents and general managers are glad the new law has been made, but that subordinates of the traffic departments are terrified, and much troubled in spirit. Nothing of the kind is true. Secret rate cutting and rate wars have long been the bane of railway operation. There is not an honest, faithful official of any grade who is really desirous that his road shall prosper, that does not admit the truth of this statement, and who is not glad the new law is in force. It will be respected and honestly obeyed, and there is now a really flattering promise that the strong arm of the law will very quickly solve the most difficult of all railway problems, and do that which the various traffic associations have for so many years been trying to do. That the Interstate Commerce Commission will rigidly enforce the law none need doubt, and it should be borne in mind that Judge Cooley has a very long head, and a long, strong arm too. So, gentlemen, you had best sheathe your little knives, for your mission as secret rate cutters is finished.

A REMARKABLE PLANT.

Its Seeds Taken Internally Induce Laughter and Great Nervous Excitement.

Chicago Herald.

Pulgrave, in his work on Central and Eastern Arabia, mentions a plant whose seeds produce effects analogous to those of laughing gas. The plant is a native of Arabia. A dwarf variety is found at Kasum, and another variety at Oman, which attains a height of from three to four feet, with woody stems, widespreading branches and green foliage. The flowers are produced in clusters and are yellow in color. The seed pods contain two or three black seeds of the size and shape of a French bean. Their flavor is a little like that of opium, the taste is sweet and the odor from them produces a sickening sensation and is slightly offensive.

These seeds, when pulverized and taken in small doses, operate upon a person in a very peculiar manner. He begins to laugh loudly and boisterously, and then sings, dances and cuts up all kinds of fantastic capers. The effect continues about an hour, and the patient is extremely comical. When the excitement ceases the exhausted individual falls into a dead sleep which continues for an hour or more, and when he awakens he is utterly unconscious that any such demonstrations have been made by him.

BILLIONAIRE KINGS.

I am afraid it will make my readers' lips water, but here is a list of some American fortunes, as I have heard them stated. I have no doubt some of them are inaccurately reported :

Name.	Capital.	Revenue at 5 per cent.
J. Gould	\$275,000,000	\$13,750,000
J. W. Mackey	200,500,000	12,500,000
C. Vanderbilt	125,000,000	6,250,000
G. P. Jones	100,000,000	5,000,000
J. J. Astor	90,000,000	4,500,000
A. T. Stewart	40,000,000	2,000,000
J. G. Bennett	30,000,000	1,500,000

These are the princes of the Land of the Dollar. The largest English fortunes fall short of these figures.

In France, with their fortunes translated into francs, Messrs. J. Gould and J. W. Mackey would be billionnaires; and I beg to suggest to the editors of French dictionaries the addition of the word :

"Billionaire—A person possessing at least a thousand millions. This phenomenon is found in America."

Needless to say that, with his millions on millions, Mr. Jay Gould is a power.

As for contending with him, as well try to break the bank at Monte Carlo with a ten cent piece.

I cannot guarantee that Mr. Gould is a happy man. Concerning immense fortunes, a witty American friend, rich in moderation, and a great philosopher, said to me one day :

"No man can own more than a million dollars. When his bank account outgrows that, he does not own it, it owns him, and he becomes its slave."

The two kings of American plutocracy are Messrs. Vanderbilt and Astor. The name of king applies to them less on account of the size of their fortunes than the generous use they make of them. They have founded hospitals, museums and libraries, and are known for the generosity with which they respond to appeals for help in philanthropical causes.

The Vanderbilt mansion in Fifth avenue, New York, is a princely habitation. The luxury on all sides is extreme. In the bath room, I am told, the walls are all mirrors painted thickly with trails of morning glories, so that the bather seems to be in a bower of flowers. In plate and pictures, many millions of dollars must have been spent. The pictures hang in two spacious, well lighted rooms. They number one hundred and seventy-four works, from the brushes of great modern masters. In the entrance hall hangs a portrait of Vanderbilt I, founder of the dynasty.

The Americans, having no king in our sense of the word, make the most of those they have. To read the pedigrees published in full every time a death occurs in one of these rich families, is highly entertaining. A Mrs. Astor died while I was in America, and, after the enumeration of her charms and virtues, came the list of John Jacobs from whom her husband had sprung. The Astors were all John Jacobs apparently, and were mentioned as John Jacob I, John Jacob II and John Jacob III. The line does not go back

very far, John Jacob I having gone to America as a poor emigrant early in this century, I believe, and laid the foundation of the present grandeur of his house by trading in furs.

It will not do to inquire too closely into the way in which some of America's millionaires have amassed wealth.

As for the colossal fortunes of railway kings, it is well known how thousands of small ones go to make them, how the rich man's palace is too often built with the stones of hundreds of ruined homes.

There is no other name than "king" used in speaking of the few great financiers, who hold the bulk of the railway stock in America. But they are not the only ones. There are oil kings, copper kings, silver kings, and I know not what other majesties in America, and when you see the power possessed by these, and the numberless trusts, combinations and pools, you wonder how the Americans, who found one king one too many, should submit so patiently to being governed by scores.

"GOD SAVE THE QUEEN."

Marshall P. Wilder's Book.

Every American who has been to England is expected to tell when he comes home what he thinks of the queen. I saw her majesty on Jubilee day; she didn't stop her carriage to speak to me, but I forgive her; 'twas her jubilee—not mine. When I've governed a great country respectfully for fifty years I won't stop my carriage in the procession for anybody; if any one wants to speak to me that particular day let them come up to the house when the show is over. As I said, I saw her majesty, and I was so much impressed that I raised my hat as high as my arm would let me. Just think of it a moment, fellow-citizens who have seen presidents rise and fall once in four years; here was a woman who for half a century had been head of the most populous civilized nation in the world, yet except for an air of modest dignity—"the divinity that doth hedge a king"—looked as honest, unassuming, kindly, womanly, and good as any decent fellow's darling mother.

"God save the queen."

"Them's my sentiments," as the man said when he hung up a printed prayer on the wall one cold winter evening, and pointed at it before he jumped into bed.

ADMIRAL PORTER lately held a state dinner in Washington, and Ah Sin, a Chinese servant was assigned to duty in attendance at the door. In his country a visitor's rank is indicated by the size of the card, and a huge yellow one means the presence of a prince. The small bits of pasteboard received but scant courtesy from Ah Sin, but when the gas collector presented his bill the celestial's demeanor underwent a change. The long yellow slip captured Ah Sin, and with profound salaams he bowed the astonished gasman into the presence of the amazed family and the irate head of the navy.

THE PENNSYLVANIA AT THE EXPOSITION.

The *Railroad Gazette* says; The Pennsylvania Railroad has responded to the call of the promoters of the Paris Exhibition and sent an exhibit which will illustrate some of the peculiarities of American railroading. The following is a list of the exhibit:

Section of passenger car.
 Passenger car truck.
 Freight car truck.
 Section of box car, Janney coupler.
 Section of gondola car, wrought iron coupler.
 Pair of wheels on axle.
 Worn out wheel with high mileage.
 Wheel spoiled in casting.
 Wheel broken to show strength and chill.
 Section of standard rail and rail joints.
 Book of photographs.
 Book of specifications.
 Cast iron wheel in flask, with piece cut out, showing method of casting.

The cast iron chilled wheel exhibit will perhaps, be of more interest to the railroad man on the continent than any other feature of this exhibit. We hope that other railroads have shown the spirit of the Pennsylvania, and have responded to the call for exhibits of actual practice. It is not yet too late to add to the American exhibit and as it is most desirable that our railroad engineers who visit Paris be enabled to call the attention of foreign engineers to the commendable features of American railroad operation, it is to be hoped that we shall, as a country of vast mileage, show our confidence in our railroad devices and send representative exhibits of the best American methods of construction and operation.

ABOUT ten years ago some wealthy young women formed an anti-marrying club, each member pledging herself not to marry under penalty of a fine of 1,000 marks. The club started with twenty-three members, and soon had thirty-one. Then an epidemic of marrying broke out, and the marks began to pour into the treasury as the fines were paid. This year at the general meeting there was but one member left, and she had 28,000 marks remaining of the paid up fines. By advice of the ex-members, this sum was divided into two parts, one to go to the Berlin hospitals and the other to the last member.

THE national debt of France is the most colossal of the globe. Egypt owes \$500,000,000, however, thanks to the coaching of France and England, imposed upon only 7,000,000 people. Mexico owes only about \$170,000,000, with more people than Egypt. The Dutch debt is 1,000,000,000 of florins; the Portuguese debt \$500,000,000; the Russian debt now \$2,500,000,000; the Italian debt of all kinds cost \$100,000,000 a year; little Greece seems to have a public debt of \$80,000,000; the British owe about \$950,000,000; the Danes about \$75,000,000; the Belgians \$430,000,000.—*Gath in Cincinnati Enquirer*.

A POOR WOMAN'S CONTRIBUTION.

Cincinnati Post.

One of the most touching letters received in regard to the Indiana sufferers comes from Moscow, O. If only the rich would give of their abundance as the poor have given of their pitance, we would send tomorrow enough to give every one of the 5,885 one good full meal at least. The letter comes from a hard working woman.

"Seeing the sad accounts of the sufferings of the miners and their poor wives and little ones, I am almost moved to tears. One can hardly believe that in this world of plenty these poor working people must suffer for daily food. I am poor and get a little money by selling the products of my garden. My two small children asked me to send the money they made yesterday and to-day, 27 cents, to the sufferers. I trust the mite will sustain one or two for a day. We have lived on very little, and don't know how soon our turn will come.

"May God's blessings go with this mite! I wish it was \$100."

WILL SOON WEAR PAPER CLOTHING.

The Manufacturer.

It is by no means improbable that paper will yet supersede cotton and woolen cloth as the clothing material of the people. One establishment in the West is already doing an extensive business in manufacture of paper clothing, and the fabric is said to equal that of any other class of goods in style and durability. For blankets, piano coverings and similar purposes, the paper fabrics are an established success. They are light and serviceable. Paper palls, dishes and canes are familiar to almost everybody. Paper boards for making houses, paper boats, paper water-pipes, column pipes, tanks, and a thousand other new uses are becoming a very important article in manufacturing, and its products are being exported from this country to every part of the globe.

CATS.

The most extraordinary will ever made was probated in Nashville, Tenn., last week. Mrs. Mary Ann Schaub, an aged German lady, died. She had surrounded herself by a number of dogs and cats and had accumulated property valued at about \$6,000, and this she leaves in trust for two of her favorite dogs. The animals are of the commonest breed. She provides that a sufficient sum shall be reserved from her personalty to maintain these dogs in comfort as long as they live, and especially orders one bed and clothing for their occupancy. A young lady whom she adopted some years ago is made secondary beneficiary upon the condition that she will live in the house and care for these dogs for a period of eight years.

It is stated that a pint of water thrown into a red-hot boiler has 75,000 times the explosive power of a pound of powder.

WHAT MIGHT BE DONE.

What might be done if men were wise—
 What glorious deeds, my suffering brother
 Would they unite
 In love and right
 And cease their scorn of one another.

Oppression's heart might be imbued
 With kind drops of loving kindness;
 And knowledge pour
 From shore to shore
 Light on the eyes of mental blindness.

All slavery, warfare, lies and wrongs,
 All vice and crime might die together;
 All land and corn
 To each man born
 Be free as warmth in summer weather.

The meanest wretch that ever trod,
 The deepest sunk in guilt and sorrow
 Might stand erect
 In self-respect
 And share the teeming wealth to-morrow.

What might be done? This might be done,
 And more than this, my suffering brother—
 More than the tongue
 E'er said or sung
 If men were wise and loved each other.

—Charles Mackay.

HARD HIT ON THE FIELD.

Peculiar Sensations Which Many a Brave Man
 Has Experienced.

Detroit Free Press.

We had been held in reserve for five long hours, while cannon thundered and muskets crackled spitefully along the front, a mile away. A procession of dead and wounded had filed past us until we were sick with horror. Shot, and shell, and bullets had fallen upon us behind the woods, until the dry, dead grass bore many a stain of blood.

"Attention! Forward—guide right—march!"

Our brigade was going in at last, and there was a look of relief on the face of every officer and man as we got the word:

"Guide right—front—forward—march!"

As we swung clear of the woods a gust of wind raised the smoke for a minute, and I saw the plain in our front blue with dead and wounded. Away beyond them was a line of earthworks, and I had one swift glimpse of a thin, blue line kneeling behind the cover.

"Steady! Right dress! Double quick—march!"

The air is alive with the ping of bullets and the whiz of shot and shell. We bend our heads as if breasting a fierce gale laden with icy pellets. There is a wild cry—a shriek—a groan, as men are struck and fall to the earth, but no one heeds them, no one hesitates. It is a hurricane of death, but we felt a wild exultation in breasting it. Men shout, curse, sing, swing their hats and cheer.

We are driving through the smoke cloud when there is a flash of fire in front. I seemed to rise into the air and float hither and thither, and the sensation is so dreamy and full of rest that I wish it could last forever. It is suddenly broken by the sound of my own voice. Is it my voice? It sounds strange and afar off to me. Why should

I cheer and curse by turns? What has happened?

Ah, now I come back to earth again. Above and around me is the smoke—the earth trembles under the artillery—men are lying about and beside me. Where is the brigade? Why did I drop out? I am lying on my back, and I struggle to sit up and look around. I rise to my knees—weave this way and that—topple over and struggle up again. There is red, fresh blood on the grass—on my hands—on my face. I taste it on my lips as my parched tongue thrusts itself out in search of moisture.

Who is groaning? Who is shrieking? Who is cheering? And why should I laugh and exult? Have we held the line against a grand charge? Did we scatter and decimate the legions hurled against us? Have we won a great victory to be flashed over the country and cause the bells to ring with gladness? Let me think. Give me time to remember how it all happened. Strange that my thoughts should be so confused, and the desire to sleep be so strong upon me when I should be up and doing. I will shake it off. I will spring up and follow after the brigade. Here—

"How do you feel?"

My eyes are wide open and I am lying on a cot in a large room. I see people walking about—other people lying on cots like my own.

"I feel all right. Why?"

"You were hit hard in the fight four days ago, my boy."

"So there was a battle?"

"Yes."

"And I was wounded?"

"Had your left arm shattered by a piece of shell, and we had to amputate it."

THEY'RE A QUEER LOT.

The Metropolis.

Lord Fife, who married the eldest and ugliest daughter of the prince of Wales, comes of a queer family. The cable has told us how three of his sisters have been divorced and married again. His mother was a very stout and handsome lady, who used to wake up in the middle of the night and devour chicken and champagne, which were placed upon a table at her bedside. She was liberal in her views and furnished a house in Kensington Gardens for Edmund Yates, then a popular novelist. When she died suddenly, her husband, old Earl Fife, found the bills for the furniture, and, like a true Scotsman, closed his eyes to their suggestiveness and merely requested Yates to pay them to him. Perhaps this hurt more than scandal. At any rate, no eulogy of Lady Fife appears in the "Reminiscences" of Edmund Yates.

A DOUBLE-ENDER APHORISM.

Says a New York paragrapher: "A majority of our rich men are not educated men." This will also read just as truly the other way.—*Rome Sentinel.*

SASSING HUSBANDS.

"A woman has a right to 'sass' her husband."

"A man who has lived for six years with a woman who has a tongue like a bell clapper has had a full share of punishment."

The Solomon who utters these decisions, which have a smattering of common sense, if not of law, says the *Philadelphia Record*, is big bluff Magistrate Bob Smith. His correct name is Robert R. Smith, but he is addressed by his full name only by utter strangers. From one end of the city to the other he is known as "Bob."

"Bob doesn't care so much for the law, but he goes in for justice. The place for him is in the Common Pleas or in the Supreme Court. We want less law and more justice these days, and that's just where he's strong," said one of the habitués of police headquarters yesterday.

This opinion is shared by all the frequenters of Fifth and Chestnut, and each year adds to the luster which the upright justice's decisions have given to the Central Station ermine. He has been holding court there on and off for nearly fifteen years, and previous to that he dispensed even-handed justice as an alderman. No magistrate is so well known in Philadelphia, and the fame of his decisions and judicial utterances has been carried to distant States. The magistrate is of sturdy frame, with a ruddy face and bright eyes, and he speaks in a sharp, off-hand way that carries terror to the evil-doer. He has passed the half-century mark by several years, but carries his age with a careless, easy grace, and still delights in red neckties and buttonhole bouquets.

The especial antipathy of the Judge is a wife-beater or a husband who has in other ways been remiss in his martial relations. His language to such offenders is severe. "You big, hulking brute," he said to one of these creatures a while ago, "it's a pity the whipping-post was ever abolished. Fellows like you ought to be tied up and lashed."

The justice is an ardent advocate of the restoration of the whipping post for certain offenses committed by men, and it has been said that he also favors a return to the ducking stool as a method of punishment for women of unruly tongues. He looks upon a common scold as being almost as bad as a wife-beater.

"Now shut up and get out of here, all of you!" he has sometimes to say when a lot of wrangling women get to squabbling and bandying words in the sacred precincts of his court. "I've heard all I want to hear from you. Skip now, or I'll put all under bail."

But the most recent decisions of the magistrate have won for him the undying love of womanhood. He has decided that it is a woman's right to "sass" her husband. The occasion of this queer decision arose from a suit brought by an up-town woman against her husband.

"He beat me until I was black and blue," the woman testified.

"What did you do that for, you brute?" said the justice.

"She sassed me," replied the husband.

"Well, a woman has a right to sass her husband," retorted Justice Smith. "Find \$1,000 bail. Madam, you go home and leave this fellow to me."

The ink had scarcely dried on the decision in this case when another attracted the attention of the justice. A woman with rather a lively tongue appeared against a man she called her husband. The fellow was as meek as Moses, and about twenty-five years older than the woman. She started off with her story at a 150-words-a-minute gait.

"Hold on!" cried the magistrate.

"He's a beast," said the woman.

"How long have you been married to that tongue?" asked the justice.

"Six years," replied his meekness in the dock.

"You've been punished enough. Open the gate and let him go," said Smith.

If there is one point more than another upon which the justice prides himself it is his memory of the faces of criminals and others who have stood before him at the bar of justice.

"How long since you served time?" he thunders at a culprit whom he thinks he has seen before his court.

"Why, Judge, I never served time," the trembling wretch answers, in all probability.

"Hold up your 'forks'" (the criminal's slang for hands up.)

Taken by surprise, the prisoner often holds up his hands, showing conclusively that he understands the jargon, and is in all probability a criminal. The crooked class all fear the justice, and would sooner meet a caged lion. He can address hundreds of them by their first names, and when he does not know it he frequently pretends that he does in a spirit of pleasantry.

Beginning life as a machinist, Judge Smith in these later years has turned his attention to agriculture, and is famous as a gentleman farmer at North Wales, on the North Penn railroad. He carries into farming the same direct methods that have distinguished him as a justice, and sometimes uses his knowledge of farming with great effect in his court.

"So you are a farm hand, are you?" he has been known to say to some unfortunate brought before him at Fifth and Chestnut streets, and who has given that as his occupation. "Well, now, how would you irrigate a field of rutabagas?"

This generally has the effect of breaking up the supposed farm hand, and the judge smiles triumphantly to Clerk Moffett at his unmasking of such deception.

REFORM YOUR IMPERFECTIONS.

However good you may be you have faults; however dull you may be, you can find out what some of them are; and, however slight they may be, you had better make some—not too painful, but patient—efforts to get quit of them.—*John Ruskin.*

DEDICATED TO SOUTHERN GOVERNORS.

Two mighty men of high degree
Went hunting for a lively flea,
And when at last they found him
They called their armed retainers out,
And leading each his vallant rout,
They vowed they would surround him.

"And if he jumps on me," one said,
"By all the gods, he's good as dead!"
And, blustering, said the other:
"If he shall jump on me, eheu!
That dastard act he'll dearly rue,
And wish he'd had no mother!"

Then leaped the flea; they both turned pale;
They startled armies, turning tail,
Fled, each in divers ways.
"He bit you, sir," one leader said;
"Had he bit me he had been dead
And numbered all his days."

The other when the flea was gone
Again his vallant air put on,
And issued proclamation.
"If anyone shall catch that flea
I'll crush him wheresoe'er he be!"
This to a laughing nation.

*Atlanta Constitution.***RUSSIAN WINTER PALACE.****How the Imperial Edifice Appears from an Artistic Point of View.**

The initiative of the Russians in art and in civilization is limited. Hitherto they have displayed greater aptitude for copying than for original conception, and even for their copies they have had recourse to western artists, particularly to Italian architects like Quarenghi, Rossi, and Count Rastrelli. The last is responsible both for the outside and the inside of the Winter Palace. This enormous structure was begun in 1732, finished in 1762, partly burned in 1837, but rebuilt in 1839 from the original drawings. It is a broad rectangular block, four stories, or about eighty feet, high, with a frontage of 455 feet in length and a breadth of 350 feet, one facade parallel with the navy, another looking toward the admiralty, the third facing the vast Alexander Place, and the fourth (blind) facade backing up to and adjoining Hermitage Palace, with which it communicates by means of a covered bridge. The proportions of this palace are not very commendable; the style of architecture is very bombastic rococo; the decoration is overcharged with statues, caryatides, flower pots, grenades and trumpery accessories; the cheap stucco surface of its facades—mercilessly broken up by pilasters, waterspouts and windows, so that the eye nowhere finds repose—is washed with a brownish red terra cotta color picked out with a lighter tone of yellow. The iron roof is painted red. The outside of this palace is absolutely without charm or merit of any kind; its only claim to merit is its immensity, which, by the way, according to Russian notions, is a very considerable claim. The interior is a saddening example of the bad taste which seems to characterize crowned heads of all nations, whether the Russian czar, the Turkish sultan, the German emperor, or the British

sovereign. The ornamentation is for the most part in rampageous rocaille style, bright burnished gold on whitewash or white imitation marble. Our pen absolutely refuses to describe the sham splendor of the imperial apartments, with their modern French polished furniture, vile wood carving, their massive screens, glazed with purple glass, their wall hangings of yellow and white or rose and green satin. The malachite room, the Pompellan room, the Mauresque bath room, likewise failed to transport us with admiration. The corner which pleased us best was Peter the Great's throne-room, whose walls were hung with soft red velvet embroidered with golden eagles. The St. George's Hall, a parallelogram, 140 feet by 60 feet, adorned with Corinthian columns of real white marble with gilt bases and capitals, is also a fine room, perhaps the finest in the whole palace. The White Hall, the Golden Hall and the Nicholas Hall are chillingly white show rooms, which require the animation of the court ceremonies and balls and the glitter of lights and diamonds in order to give them a picturesque interest. Finally we may notice the state entrance to the palace from Neva Quay, called the Ambassadors' Stairs, of white Carrara marble, and the vestibule, richly decorated and gilded with renaissance ornaments and statuary. This staircase and the St. George's Hall are the only two parts of the Winter Palace that present an aspect of real grandeur and majesty.

AN ELECTRIC MOUNTAIN RAILWAY.

One of the most interesting achievements in modern engineering is the electric mountain railway recently opened to the public at the Burgenstock, near Lucerne. The rails describe one grand curve formed upon an angle of 112 degrees, and the system is such that the journey is made as steadily and smoothly as upon any of the straight funicular lines. The Burgenstock is almost perpendicular—from the shore of Lake Lucerne to the Burgenstock is 1,330 feet, and it is 2,860 feet above the level of the sea. The total length of the line is 938 metres, and it commences with a gradient of 32 per cent. which is increased to 58 per cent. after the first 400 metres, this being maintained for the rest of the journey. A single pair of rails is used throughout, and the motive power, electricity, is generated by two dynamos, each of twenty-five horse power, which are worked by a water wheel of nominally 125 horse power, erected upon the river Aar at its mouth at Buochs, three miles away, the electric current being conducted by means of insulated copper wires. The loss in transmission is estimated at 25 per cent.

NO REASON WHY HE SHOULD,

"What's the matter, little boy?"

"That feller hit me."

"Well, I wouldn't cry if I were you."

"'Course you wouldn't, 'cause you're big enough ter lick him."—*Life*.

IN DREAMTOWN.

Eben Ruxford.

I'd know when bedtime came, dears, if all the
clocks stood still,
And the sun should keep on shining above the
green old hill;
For it's then the little children no longer care
for play,
But want to go to Dreamtown, a thousand miles
away.

How do they go to Dreamtown? They shut
their eyes, and lo
Across the moonlit valleys and o'er the hills
they go;
And quite before they know it, so the wise
people say,
They're in the Dreamtown country, a thousand
miles away.

What do they do in Dreamtown? ho, everything
that's nice,
There sweet things are so plenty they never
have a price.
You've but to take and eat them, and those who
go there say
There is no place like Dreamtown, a thousand
miles away.

They tell of Mince Pie Island, and Roasted
Turkey Hill,
Where they go when they get hungry, as folks
in Dreamtown will;
And you've just to take your choice, dears, at
least so I've heard say,
Of all good things in Dreamtown, a thousand
miles away.

There's a grove where fire-crackers grow in
bunches on the trees,
And a mill that grinds out marbles, and such
like things as these.
And everybody helps himself to all he wants,
they say;
For that's the rule in Dreamtown, a thousand
miles away.

There's nothing that you wish for when you are
wide awake
That isn't found in Dreamtown. They tell me
that they take
The biggest kind of sugar-plums, and dolls are
picked each day
From every bush in Dreamtown, a thousand
miles away.

Good-night, my drowsy darlings. The sleepy
eyelids close,
And straight to this strange country each little
traveler goes,
When morning-glory trumpets are blown at
break of day
You'll all come back from Dreamtown, a thou-
sand miles away.

OLD PEOPLE IN CHILI.

Remarkable Lack of Veracity Displayed in the Last
Census.
Chicago Herald.

The recent census of Chili, shows a remarkable
percentage of centenarians. The total popula-
tion of the republic is 2,500,000. Of this number
nearly 500 persons profess to have lived more
than 100 years each. While the number of old
ones is excessive, the great age claimed in indi-
vidual cases taxes the credulity to the straining
point. One man coolly returned his age as 150,
and this would make it very probable that he is
the oldest man in the world. Next to him comes

a woman aged 138; two women and one man re-
port themselves as 135, 132, 130, 127, each have a
representative, while there are seven 135 years
old. Below that age the numbers mount rapidly,
showing twenty-eight persons of the age of 120,
twenty-seven aged 115, and no less than ninety-
one aged 110. The returns carry the evidence of
their unreliability on their face. No accom-
plished and really able liar ever names round
figures. He is always exact as to details. These
Chilian romancers have not this northern ac-
complishment; most of them measure their ages
by decades or by half decades. Twenty-eight,
for example, are set down at 120, while but two
are given to 119 and only one to 117; ninety-one
are put at 110, while but eleven reach 109. Our
own census bears witness to the untrustworthy-
ness of the testimony of the ignorant to their age,
but two out of 100,000 white persons giving their
ages as above 100, while forty-five out of 100,000
colored persons claim that distinction. A fish
story from Chili would be an interesting bit of
reading.

AMERICAN FEDERATION OF LABOR.

Indianapolis News.

The first effort to combine the trades unions
into a national body, resulted in a meeting at
Baltimore on the 20th of August, 1866, at which
sixty labor organizations were represented, and
the National Labor Union was formed. Subse-
quent conventions of this body were held in '67,
'68, '69, '70, '71 and '72. In 1872, the organization
nominated a candidate for President of the
United States, which action caused dissensions
and caused the rapid disintegration of that once
powerful body. In 1881, at Pittsburg, the Federa-
tion of Organized Trade and Labor Unions of
the United States and Canada was organized.
Meetings were held at Cleveland in '82, New
York in '83, Chicago in '84, and Washington in
'85. Owing to the aggressions of the Knights of
labor, in 1886, at Columbus, Ohio, the organiza-
tion was greatly strengthened, and the name of
the "American Federation of Labor" was adopt-
ed. The next year, at Baltimore, 600,340 members
were represented. For the benefit of a writer in
Sunday's Sentinel, we quote from Mr. Gompers,
President of the Federation, as follows: "The
third convention of the American Federation of
Labor, * * * was held at St. Louis, De-
cember, 1888." The organization is having a
wonderful growth, and will more than fill the
breach caused by the wasting away of the Knights
of Labor.

A SCIENTIFIC GIRL.

"Charley, do you know what is meant by the
anatomical juxtaposition of two obicularis oris
muscles in a state of contraction?"

Charley (who prides himself on being scien-
tific—"Why, yes. In plain language it means a
kiss."

"What a chump I am! Miss Mosby asked me
what it meant last evening, and I had to give it
up."—*Chicago Herald.*

TO SOOLIVAN.

Och, Mister Soolivan,
Sure, ye're a mighty wan,
Faith, an' ye seem to run
Mostly to fists!

But with a jag on you,
Down on ther avenoo,"
Whin ye've a pint or two
Under yer chist!

Arra, ther papers say,
Yees ather actin' gay,
An' in yer playful way,
Raise a howl!

Whilra, ye murtherin' thug,
Betther a grizzly's hug
Than ye shed tap me mug,
Yis, be me sowl!

Acushla, now Sooly, dear,
Divvie a bit we'd keer
Af ye got out of' here,
Whist! d'ye moind!

Carry yer jags away,
Save 'em for Boston Bay,
Thin every one'll say
Faix, but he's koind!

—Chicago Herald.

A SENSIBLE IRISHMAN.

He Went to the Health Bureau and Demanded
Some Health.

San Francisco Report.

"Bees this the hilt office?" inquired a hardened looking citizen with a gin countenance of Clerk Williams this morning.

"Yes, sir," was the reply.

"Well, thin, Oi want some hilt. For the last twenty years Oi have been takin' a drap too much till Oi'm bruk in mol constatushun. Please fix me up."

"If you want to be vaccinated, we'll attend to you, sir."

"It's vaccination you'd give me, is it? Well, Oi've been vaccinatin' me stummick wid bad whisky for many a year, and the treatment is not beneficial. No, sir; I want yees to give me hilt again."

"My dear sir, we can't do it. It's not our business."

"Thin ye dhraw salary for chatin' the public. Oi'm a taxpayer. Gimme hilt."

"Can't."

"Wat?"

"Can't."

"Thin by the coat tail of St. Patrick I'll spile yours by using ye to dust the flure and furniture," and he began hastily to remove his tattered coat.

"Hi! there, doctor, bring in that last small-pox patient!" shouted the clerk.

There was a wild shriek of terror, the coatless form of the health seeker vanished through the door, and an instant latter he was making railroad time down Market street.

The small-pox case, it is proper to say, did not appear.

KNEW WHAT HE WAS ABOUT.

Why a Detroit Man Did Not Whip His Dog After All.

A well-known resident of Detroit is the possessor of a brown spaniel, to which he is very much attached. He related the following story to a *Free Press* representative, which contains "good and sufficient reasons" for his attachment: One winter night," said the gentleman, "several hours after my wife and I had retired, I was partially awakened by 'Joker,' who had jumped up on the bed and placed his fore paws on my chest. I pushed the dog off onto the floor and turned over to go to sleep again. He repeated his first performance and again I pushed him off. After that, instead of jumping on me, he pushed his nose under my head three or four times, and sprang back quickly to prevent my hitting him. At last I was thoroughly awake and I jumped out of bed to whip 'Joker' for bothering me. I had no sooner started to walk across the room than I staggered and fell to the floor like a drunken man. It seemed as though I were suffocating. I was frightened to death, in spite of the stupor that overcame me, with great effort I managed to crawl to the window and open it. When the cold fresh air struck me it seemed as though something had exploded right next to my ears. As soon as I was sufficiently revived I rushed over to wake up my wife. I found her unconscious. I carried her over to the window immediately, where the fresh air restored her. Upon investigation I found that we had been breathing coal gas, which was escaping from a stove in the next room. So you see my wife and I think a great deal of 'Joker' and wouldn't undertake to get along without him."

A SINCERE MOURNER.

Among John Bright's sincerest mourners in this country was Edward Finch, a mule spinner at Providence, R. I. While a Corporal in a British regiment Finch fell under the displeasure of a superior officer, a vindictive young sprig of nobility, who finally had him tried by court-martial and sentenced to be flogged. Finch's brave young wife hurried to London and told her story to Mr. Bright, who used his influence with the War Department so successfully that the soldier was released. Later Mr. Bright furnished him the means for obtaining his discharge, and Finch and his family came to this country.

HENRY GEORGE SUSTAINED.

Miss Culture—"What do you think of Henry George's single tax idea?"

Miss Gushington—"Well, I see no reason why he should not tax single men, but I don't think he ought to tax single women—it isn't our fault."—*New York Weekly*.

An order for 500 refrigerator cars will soon be placed by the Louisville & Nashville.

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

SEPTEMBER, 1889.

Assessment Notice for September.

OFFICE OF GRAND LODGE, B. OF L. F. }
TERRE HAUTE, IND., September 1, 1889. }

ASSESSMENT No. 6, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members who were entitled to all the benefits of the Order, viz:

CLAIM No. 116. Charles Stack, of S. M. Stevens Lodge, No. 150, was declared totally disabled by Loss of Leg, April 12, 1889.

CLAIM No. 117. Perry Cunningham, of Royal Gorge Lodge, No. 59, died of Consumption, May 18, 1889.

CLAIM No. 118. Edward Flynn, of Chicago Lodge, No. 95, died of Meningitis, June 30, 1889.

CLAIM No. 119. Charles E. Tyler, of Hinton Lodge, No. 236, was killed by railroad Accident, July 4, 1889.

CLAIM No. 120. Edward C. Pore, of Youghiogheny Lodge, No. 322 died of Consumption, July 5, 1889.

CLAIM No. 121. M. J. James, of Fall River Lodge, No. 336, was killed by being Struck by a Switch Target, July 5, 1889.

CLAIM No. 122. Daniel W. Collins, of Pilot Lodge, No. 124, was killed in a Collision, July 8, 1889.

CLAIM No. 123. Charles A. Smith, of Adopted Daughter Lodge, No. 3, died from Injuries received in a collision July 13, 1889.

CLAIM No. 124. Charles M. Jackson, of Confidence Lodge, No. 102, died of Consumption, July 15, 1889.

CLAIM No. 125. William M. Walling, of Sattilla, Lodge, No. 325, was killed in a Collision, July 18, 1889.

CLAIM No. 126. George T. Douglass, of Macon Lodge, No. 246, was killed by railroad Accident, July 21, 1889.

An Assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and the Receiver is required to forward said amount for each member, whose name appears on the rolls September 1, 1889, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than September 20th, 1889. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Acknowledgments.

CHICAGO, ILL., July 27, 1889.

To the Officers and Members of Chicago Lodge, No. 95, of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Please accept through me the sincere and heartfelt thanks of myself and family for the kindness and respect shown to my deceased son, James Gallahan. I also thank you for chartering cars for the funeral. Believe me, your kindness will ever be held in grateful remembrance by his bereaved family.

Yours gratefully, his mother,
MRS. GALLAGHAN.

BUTTE CITY, MONT., August 1, 1889.

MR. EDITOR:—Through your valuable Magazine I wish to thank the members of J. K. Gilbreath Lodge, No. 264, for their great and unceasing kindness to my dear son, W. L. Clark, during his brief illness, which terminated so suddenly on the third of March, and will add, I think the B. of L. F. a great boon to all within its fold. Received draft for insurance with many thanks

Yours truly,

CHARLOTTE M. CLARK.

CANMORE, N. W. TER., June 29, 1889.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—It is with sincere thanks that I acknowledge the receipt of a draft for \$1,500 the full amount due on the policy of my late son, Charles A. Fidler. I also wish to thank the members of Gold Range Lodge, No. 311 and Cascade Lodge, No. 312, for the kindness shown me and my family in my late bereavement. May heaven's blessings fall upon the members of your noble Order is the wish of,

MRS. MARGARET FIDLER.

LAFAYETTE, IND., July 9, 1889.

To the Officers and Members of the B. of L. F.:

DEAR SIRS AND BROTHERS:—I desire to return thanks for payment of a draft for \$1,500, which I received on the 5th day of July, and I also wish to thank all the members of Tippecanoe Lodge, No. 36, for their kindness to me in my bereavement, and for their respect to my husband after his death. May God bless every member and every Lodge throughout the land, for they are noble, kind-hearted and true men. May God bless and protect you all is the wish of one in sorrow.

I remain yours,

MRS. FANNIE HEWES.

PHILIPSBURG, PA., July 22, 1889.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—We beg to acknowledge the receipt of fifteen hundred dollars (\$1500) from F. A. Davis, of Altoona Lodge, No. 257, B. of L. F., of which lodge our son, Edward M. Swartz, who died March 25, 1889, was a member. We also wish to express our sincere thanks to the members of Altoona Lodge who attended his funeral and lent us their aid, and also to the other orders and societies which showed their sympathy by attending the funeral. These friendly demonstration of regard for our dear son's memory did much to comfort us in our sore affliction.

JOHN G. AND M. J. SWARTZ.

LEGS and ARMS with Rubber Feet and Hands
MARKS' PATENTS.

In 1884 Mr. Harmes became the victim of a R. R. accident which necessitated the amputation of both of his legs. Five months after he provided himself with a pair of Marks' artificial legs with rubber feet. With these he was enabled to walk without the aid of a cane. A short time afterward he was appointed station agent, which he holds at the present time. The labors of this position are arduous, trying and difficult, requiring heavy lifting, much walking and quick movements. Mr. Harmes says: "With the Marks' Rubber Feet and Patent Legs I am able to handle boxes, barrels and trunks weighing 125 lbs. I can carry them and place them on a car without help. I can get on and off a train when it is moving at the rate of 15 miles an hour." All persons who have lost one or more of their limbs, or who are acquainted with those that have, are invited to write for a Treatise of 400 pages, which will be sent free. Limbs fitted from measurements with guarantee of success without presence of the wearer.

A. A. MARKS, 701 Broadway, New York.

Railroad Patent Square Ventilated Dinner Pail.

BEST PAIL MADE.

We have many testimonials like the following:

ARKANSAS CITY, ARK., January 15, 1889.

Reardon & Ennis:

Dinner pail arrived all O. K., and would say that it is just the boss for engine men and those who take their dinner or lunch to work with them, and will recommend it to all the boys on the line, and hope they will get it from you

Respectfully

JOSEPH GREGORY, Engine 448.

Size of No. 2 Pail is 9¼ in. long by 5¼ in. wide by 9¼ in. high, when locked up.

To introduce these Pails, until further notice we will deliver one No. 2 Ventilated Pail, boxed and expressage paid paid, at any express point in the United States on receipt of P. O. Order for one dollar and fifty cents.

REARDON & ENNIS,
Sole Manufacturers, TROY, NEW YORK.

NOTICE TO FIREMEN!

Do you have trouble with scale in your boiler, or corrosion from acid feed-water? The Pittsburg Boiler Scale Resolvent will remove and prevent scale formations and prevent corrosion. It contains neither acid or alkali, and is so bland in its nature that it can be used to dress a sore or a burn with excellent results. If you can persuade your Master Mechanic to let you try it, we will send a 30 gallon package without charge and prepay freight, on the simple condition that it be tested against the worst water on the road.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,800,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Special Announcement to R. R. Firemen!

The results of sales the past year by railroad boys acting as agents for

THE BEST POLISH IN THE WORLD.

BAKER'S

TRIPOLINE,

AN INTERESTING HISTORY OF

Dimmick's Kidney AND Bladder Cure!

Having contracted a kidney difficulty while serving in the army in 1864, I was enabled to serve out
my time only through the assistance of our regimental surgeon. Returning home in the fall of 1865, I
found my old enemy [the kidney trouble] still clinging to me. I placed myself under the treatment of
several successive physicians, who gave me temporary relief, but were unable to effect a permanent cure.
I paid large sums of money to the different physicians whom I consulted, and tried all the various reme-
dies which promised relief, but to no avail. I continued my efforts until the spring of 1875, my malady
in the meantime increasing to such an extent that on several occasions I became unconscious and was
confined to my house for several weeks at a time. I was then induced, through the earnest solicitation
of a friend, to consult an old and learned practitioner of Chicago, then temporarily located in Bingham-
ton. This physician gave me a prescription in liquid form, of which I used two bottles. The lameness
in my back disappeared and I was relieved of the severe pains I had previously suffered. Having experi-
enced such happy results, and feeling my utter helplessness in case of a recurrence of an attack of a
similar nature, I decided, if possible, to purchase the recipe for compounding what is now so favorably
known as "Dimmick's Kidney and Bladder Cure." The old physician, who was about removing to the
Southwest, after some hesitation, consented to dispose of the recipe to me on payment of a considerable
sum of money. About two years after the purchase, while acting in the capacity of a railway engineer, I
became affected with a prickling sensation in the face, arms, right side and right leg extending to the
knee, followed by numbness, or a partial paralysis. This gradually made such inroads that I practically
lost the power of locomotion and had no use of my right arm. I was compelled to relinquish my position
as an engineer, ran down physically, and became a mere shadow of my former self. The best medical
talent abandoned my case as hopeless, and it was the commonly expressed opinion among my associates
and acquaintances that I would soon pay the debt of nature. In my extremity, and not knowing the
efficacy of the remedy I had purchased, a relative wrote to the physician from whom it had been obtained,
for advice, and received the answer that I had in my possession a recipe that was a specific for that diffi-
culty. I at once commenced taking it, and in 75 hours experienced a sense of grateful relief. I continued
its use for about one year, taking in that time fifteen of the large sized bottles. This was two years ago
and now I am as well and strong as I ever was and run my engine 110 miles a day. I feel that it has saved
my life and I heartily commend it to my fellow sufferers.

A. D. DIMMICK.

\$1.00 per Bottle.

Send orders for goods, or other testimonials, to

BROTHERHOOD MEDICAL CO.,

121 Randolph Street, CHICAGO, ILL.

“I would not trade my old Boss case that I have carried for twenty years for all the watch cases in the world. It has been in many a tight place, and has always come out safe and sound, insuring perfect protection to the works—which are the best—a necessary luxury with us knights of the throttle. If you want a watch, take the advice of an old engineer, and get a Boss.”

These cases are guaranteed to last twenty-five years. Many that have been in use for thirty years are still intact. They are made of two plates of solid gold, 14 $\frac{3}{4}$ karats fine, overlaying a plate of composition metal, in such a way as to leave no exposed surfaces. They are stronger, stiffer, and afford better protection to the movements than solid gold cases.

Every genuine JAMES BOSS CASE contains this trade mark stamped in the back. Refuse all others.

OCTOBER, 1889.

INTER-STATE COMMISSION INVESTIGATION.

On August 12th the following item was telegraphed from Washington City:

The Inter-state Commerce Commission has sent circulars to the various general managers of railroads and organizations of railroad employes asking them to cooperate with the Commission in securing information bearing upon the relations between the railroad corporations and their employes. All railroads addressed are requested to state if an insurance fund or guarantee fund of any sort is provided for the employes, on which they have a right to draw in case of sickness or accident, or from which payment may be made to their families in case of death. Where such a fund exists full information is asked as to its modus operandi and length of time it has been in existence, and the feelings in respect to it on the part of the employé. The railroads are also asked if they provide eating or lodging-houses, or reading-rooms for their train men when away from home, and also if any provision is made for technical education in the shops. The railroads are further requested to state whether or not there is any recognized system of promotion in the service of the company whereby it may be expected the men will be induced to labor for marked efficiency; also, if there are any special rules in force to insure the competency of the locomotive engineers and

other train men. The labor organizations are requested to give similar information in regard to any insurance project they either have now or have had in operation. They are further asked if their order insists upon any rules of apprenticeship, and for the length of term a fireman or brakeman must serve before promotion. The organizations are in addition asked whether there is any recognition made of grades of service of engineers and conductors, and whether promotions to foremanships and like positions in the shops are made by promotion or by bringing men from the outside.

At the first blush the foregoing would appear to be in line of prudent investigation. The information asked for is seemingly of so much importance that the public is entitled to it, and should be thoroughly advised upon all matters affecting railroad employers and employes.

We do not object to the course the Inter-state Commission, as indicated in the dispatch, proposes to pursue, but the question arises, when the information demanded is obtained, what does the Inter-state Commission propose to do with it? What use can be made of it? How can the Inter-state Commission interfere, one way or another, between employer and employé? Take this for instance: "All railroads addressed are requested to state if any insurance fund or guarantee fund of any sort is provided for the employes on which they have a right to draw, in case of sickness or accident, or from which payment may be made to their families in case of death."

Suppose certain roads answer affirmatively and others negatively, what then? A num-

ber of roads will doubtless answer affirmatively. Possibly, they may give a detailed account of their insurance schemes, the number of contributors, the amount of money paid out for sick and death benefits, and the sum total may be such as to impress the Inter-state Commission and a superficial thinking public that the railroad corporations by some hocus-pocus operation have been transformed into a charity-bestowing institutions, that stockholders, bondholders, president and directors have "been born again;" have become a sort of a salvation army, and that suddenly the corporations, caring little for dividends, have become a convert to the sublime precept to "lay up treasures in heaven." And this beautiful thought becomes enchanting when it is known that the Philadelphia & Reading and the C., B. & Q. have established insurance schemes, two corporations which under their present management, love their employes as the devil loves holy water; loves them with an intensity that a wolf is supposed to love a lamb, or man-eating tiger loves a native Indian or an imported Christian.

In its investigations the Inter-state Commission might, with a great deal of propriety, ask if the employé realizes how much the corporation insurance scheme elevates him in the scale of independence, self-respect and other things that are supposed to adorn and dignify American citizenship.

In the corporation insurance scheme, the employé who goes in, is never, after his initiation, consulted about anything. His dues are simply taken from his wages in advance. He knows that he has been assessed, that the money has been taken, and that is all he knows about. He has no voice in any matter pertaining to the scheme. Protest? Certainly, and a sheep may bleat while it is being shorn, or is being transformed into mutton, but it avails nothing. The employé, as soon as he joins a corporation insurance scheme, becomes a part of the rolling stock of the corporation, and is so regarded. If he is sick, he takes what he can get, and is as dumb as a cross-tie. Thinking being he may be, but it does him no good to think about the corporation insurance scheme;

that is placed beyond the grasp of his mental powers. He simply submits, as any other serf. He is tied to the road. The more he pays the stronger he is tied, not only himself, but his wife and children are tied to the road. The corporation chuckles, and well it may. It can count its men—count its children. The whole thing is being reduced to a system. It is a triumph of cunning. It degrades men and it cheapens them. Employés in the grasp of a corporation insurance scheme may think they are free men, but they are not. They are voiceless in matters of supreme concern to themselves, and their wives and children. Their money is taken, it goes into a fund bearing the captivating name of "Insurance Fund." The corporation gets the money, manages the fund, invests it, draws interest upon it, pays it out as it pleases, but the employes who contribute the money have no more to say about it than so many mules. Suppose an employé feels some sensations of manhood stirring within him. Suppose him to be not totally degraded. Suppose he demands a showing of accounts, an investigation of receipts and disbursements? He is at once pronounced a "kicker," a disturber of "harmonious relations" between employer and employé, and receives the "grand bounce." He is set adrift, probably black-listed, and the rest of the "gang" are taught the importance of silence and submission, and thus the work of insurance degradation proceeds. If the Inter-state Commission will investigate in the direction indicated it will find abundant food for reflection.

Suppose the Inter-state Commission determines to interrogate employes upon the subject of corporation insurance schemes. It will find that men will hesitate to talk. It will find men fearful of consequences, of penalties. It will find men awed, cowed, shrinking, degraded; the merest puppets, wearing corporation chains, whose every act and word declares that were they to talk straight out they would forfeit their job and be turned adrift. But if the Inter-state Commission should likely find one not yet totally enslaved, nor completely Russianized, with a spark of American manhood left, with some lingering sentiment of independ-

ence and self-respect remaining in him, or, if taking the poor, degraded creature aside, and giving him assurance that his name should not be given to the corporation, the facts obtained would be about as follows:

We will suppose the man questioned to be a locomotive engineer on the Philadelphia & Reading, or on the C., B. & Q. We say "engineer," because of position and pay the engineer is supposed to be a distinguished representative of railroad employes; a fireman, a conductor, a brakeman or switchmen answers the same purpose, and may be substituted by those who are so inclined; no disrespect is intended—we are simply seeking an illustration.

We will suppose the Inter-state Commission is in secret session, and the witness quietly brought in by the back door. The investigation begins with an employé on the Philadelphia & Reading. "C." stands for Inter-state Commission, and "E." for engineer or employé.

C.—State your name, age and employment.

E.—John Smith; forty-five years; engineer.

C.—Are you a married man? If so, how many in your family?

E.—Yes. Have a wife and three children.

C.—How long have you been employed on this road.

E.—Five years.

C.—Are you a member of the Brotherhood of Locomotive Engineers, or were you ever a member of that Order? State all the facts in connection with the subject.

E.—I was a member of the B. of L. E. in good standing. I am not now a member of that Order. I was officially informed if I remained a member of the Order I would be discharged; that no man, a member of a labor organization could have employment on this road.

C.—Give your views of such an order emanating from the corporation.

E.—Well, I regard it as anti-American, and ever since I have thought of myself as a kind of a serf. I feel that my manhood, my independence, my self-respect, my rights and prerogatives as a citizen are all swept away. I have a family on my hands, and am dependent upon my work for their support, and it was these facts that produced my present humiliating and degrading condition.

C.—Has the Philadelphia & Reading Railroad an insurance scheme? Tell the Commission what you know about it, if such a scheme exists.

E.—The corporation has what it calls an insurance scheme. I am assessed a certain amount every month in advance. All I know about it is my money is taken. I have nothing to say about it. I have no voice in the management of the scheme. I dare not say a word about it. If I were to ask any question I would be in danger of being discharged. The men all know this, and are silent. There are spies and spotters on every hand; men distrust each other. They realize their degradation, but are compelled to submit.

C.—Why do you say "Compelled to submit."

E.—Well, you see, if I kick, if I exhibit any manhood, I am discharged. I lose my job. It is bread and butter on one side and independence on the other side; and bread and butter wins,

independence loses. There is not to-day an independent man on the Philadelphia & Reading Railroad. They all stand in fear of the corporation.

C.—Are the employes Americans?

E.—There are many of them American born, and call themselves Americans, but they are, if possible, more degraded than the Hungarians, Poles, and the rest of the imported creatures, degraded from their birth; cave dwellers who live in filth, and devour offal like dogs. They are born and bred that way, but Americans accept degrading conditions on the P. & R. as uncomplainingly as do these imported aliens.

C.—And yet you say the corporation has an insurance scheme?

E.—Yes, it has an insurance scheme. I understand the corporation intends to extract \$1,000,000 from its employes, and when that amount is raised the concern will be ready, I suppose, to go again into the hands of a receiver; the deadfall will be sprung on us, and the insurance fund will disappear with other assets. The road has the reputation for swindling friend and foe.

C.—Do the various organizations of railroad employes provide insurance for their members?

E.—Yes, far better than any railroad corporation; besides, the members of the organizations have a voice in the management of the fund. And here I want to call the attention of the Commission to the important fact that the corporation insurance scheme is intended to everlastingly tie the employe to a particular road or system. He may have paid for ten years, and never drawn a dollar. At the expiration of ten years he may desire to go elsewhere—leave the road upon which he has worked. If he does this he loses all he has paid in; all claims. Not so with the Brotherhood. The member may go where he pleases. He is a free man. He surrenders no right, no privilege. But with the corporation, the day he leaves, the day he breaks his fetters, he forfeits all claim to the corporation insurance fund. It is easy to see that the Brotherhood insurance scheme is promotive of manhood, independence and American ideas of rights and privileges, while the corporation scheme debases the man.

C.—Is it not singular that a man of your intelligence should fall a victim to a scheme which you seemingly abhor?

E.—Yes, it is strange. It is difficult to explain. Perhaps the Inter-state Commission can unravel the mystery. It was organized to put an end to malpractices in railroad affairs; to regulate the "long and the short haul," to put an end to "pooling," and some other wrongs existing in railroad management. I have answered your questions frankly. There are thousands of men in the grasp of circumstances created by villainous, whose high ambition it has been to degrade working men, and they have succeeded to an alarming extent. They are breaking down labor organizations that they may degrade men, compel them to work for wages such as imported paupers are willing to accept. They are making the term "American citizen" a thing of contempt. They override law, human and divine. They have debauched courts, and Congresses, and Legislatures. They are animated by greed, and the almighty dollar is their God, and they worship it with more than heathen devotion, and the question is, what is the Inter-state Commission going to do about it?

Manifestly "E." has given the Inter-state Commission a number of pointers, and we shall take no little interest in its reports, when all the questions it propounds are answered.

It should be understood that railroad employes desire no government parentalism. They are themselves a part of the govern-

ment. In so far as statutes are concerned, railroad employes are opposed to such laws as give employers special advantages over them, and under cover of which they may be oppressed and degraded. Railroad employes are anxious to give good work, for a proper length of time, for fair, honest wages. This done, they will take their money and expend it as they may deem proper. This talk about what the corporation is doing for its employes degrades men, and it ought not to be heard of. Let the Inter-state Commission investigate, the more the better, but let railroad employes go forward and perfect their organizations and get ready to federate, and then they will be prepared, when a corporation issues its edict to break down their organizations and submit to their terms, in every word a menace, to assert their rights and to maintain them. The United States ought not to be Russianized, nor can it be if workingmen are true to themselves.

ROBBING EMPLOYEES BY EMPLOYERS.

In a recent issue of the *Iron Age*, we find a communication over the signature of "Lapis," and captioned, "Brain robbery by Employers." The writer starts out as follows:

I suppose it will be accepted as an admitted fact that strikes and lockouts are the bane of the present industrial age. The fact that there was lost by the laborers of the United States in 1887, 10,250,921 days of work, aggregating on a basis of \$1.50 per day over \$15,000,000 is proof enough and most startling too, of this fact. Neither labor nor capital is at loss as to where to rest the blame for all this prodigal loss, each one of course laying it upon the other. After having passed through an apprenticeship and service as machinist, and being more or less familiar with both employer and employed in most of the Northern and Eastern States, I am of the opinion that nearly all strikes are very ill-advised, on the part of the strikers. Yet there is a phase of this question to which little attention has been paid in print which unmistakably discloses the manufacturer as a robber; a brain robber, if I may so term it. By this I mean a robbing of the workman of the profits of his own brain and muscles where employed beyond that honest point covered by his fair and honest labor. I refer to the constant and cruel injustice done the "piece worker," in the matter of scaling down his price.

It is scarcely required that the foregoing should be particularly criticised, since, as the writer proceeds, he demonstrates pretty conclusively that "all strikes are," not "very ill-advised," but, on the contrary, are the result, of such robbery as he complains of,

which is a combination of robbery and oppression, that no self-respecting man should submit to for a day. The writer says:

Perhaps my own experience in this matter of brain robbery will serve as an illustration. Many years ago I entered a large machine shop in Northern Ohio, as a day laborer. I was set to work at \$1.50 per day. Being naturally ingenious and ambitious, I soon became a good workman. Work in the shop was rushing and each tool and each man was required to turn out as much work as possible. Others were doing piece work and I applied for it and was given it, the basis of price per piece being somewhat less than the record showed the work to have previously cost the concern, counting my wages at \$1.50 per day. Stimulated with the prospect that by extra diligence, working overtime, and by exercising my ingenuity in the matter of making glass, etc., for correct and rapid work—all of which I prepared myself—I could increase my earnings, I set myself to the work, employing every faculty I possessed, applying myself in a manner no employer could or would have required of me, as a day workman. The result was, as it will be in most cases of a similar character. I soon found myself in the pleasant enjoyment of more than double the earnings I had before gotten. I felt a genuine honest pride in those results, feeling that I had honestly earned the extra compensation. I worked much of the time twelve and even fifteen hours each day. I was drawing heavily on my physical and mental reserve forces, for I constantly figured and planned, and made ingenious appliances to increase the output.

In the foregoing we have a remarkably well painted picture of an ambitious hard-working young man, determined to make the most of his opportunity to get on in the world. Such a young workingman, it is fair to assume would be the pride of his employer, that he would see in him the making of a superior mechanic, and that he would promote him as opportunities offered. This was not done. Let us have the story as "Lapis" tells it:

It was I who expended the extra force, and no one had a right to appropriate the benefits of that expenditure. What was the result? It was this. In the dead of winter, when other employment could not be had, the company, who were then amassing wealth very rapidly, ordered 40 per cent. taken off my price per piece. They coolly figured that that 40 per cent. about represented my ingenuity and extra hours of work. Protest and argument were useless. The president said I had not been in the shop long and was earning too much. It was hard, but I had to submit. I went to work again with redoubled effort. I worked as no man is ordinarily required to work, and when the next winter came around I was nearly up to the old work in earnings. But I was doing an amount of work that sooner or later would deleteriously affect my physical forces. Imagine, therefore, my despair and disgust, when this same man again run his pencil through my piece price list, and took off this time 20 per cent. The protest of the foreman added to my own had no effect on that man. He had his greedy eye on me. He was bleeding me to the extent of more than half (80 per cent.) of my earnings. Let up on me? Oh no. He would watch my pay-roll and gleefully cut me down again, if I could stagger from under the two cuts already made. Well, to make it short, he didn't have another chance, for I

took my gigs and dinner pail and left the shops; and when later I met him in St. Louis he magnanimously offered to give me a good (?) job if I would come back.

In the foregoing, the robber is brought out in all his repulsive traits. He is a robber, and no mistake. He never drew an honest breath. He is more infamous than half the foot-pads that infest the highways. He is mean, sordid, contemptible to a degree that defies characterization. He may be, and doubtless is very rich in money, but he is far richer in rascality. Of him "Lapis" further writes:

This is what I call brain robbery. An absolute robbery for which there should be statutory penalty; and yet it is what unprincipled employers are engaging in to an extent little dreamed of among honest men. This liberal (?) employer, I might add, poses before the world as a moral educator, and is one of the originators of a famous Sunday school lake resort in Western New York, and enjoys the reputation of being a very wealthy man.

We are not at all surprised that the wretch, who robbed "Lapis" poses as a christian, a moral educator and a Sunday school dude. He probably robs his employes and gives the "swag" to the church. He is one of those pharisaical white sepulchers, of whom Christ said they are "beautiful without," but "within are full of all uncleanness." Why does "Lapis" withhold the name of the Christless whelp? Why not give his name to the world, and let honest men lash him until his infamy is exposed, or until he is dead and damned, as he ought to be? Why let such scoundrels pose before the world? Why not strip them of their hypocritical masks, and stand them in the pillory to be spit upon by indignant men?

Would it be "very ill-advised" for honest men to strike against such methods of robbery, as the "original of the famous Sunday school lake resort" practices, to rob his men? We think not. No more than it would be ill-advised to strike against any other robber, or form of robbery. What is wanted, is to expose sanctified (?) scoundrels—long-faced, psalm singing cheats and frauds, such knaves and swindlers, such scamps and catiffs, are the fellows who are doing more than all others, to introduce the Chinese ideas of labor into the United States.

PERORATION.

Col. J. B. Maynard, who delivered the principal address at the Knights of Labor picnic held at the Exposition building, in Indianapolis, on Labor Day, September 2d, 1889, concluded his remarks as follows:

"I am not here to indulge in any superstitious cant, but I believe that prayer mysteriously moves the arm of the Being who built the world. I believe that a labor day was prayed for by the slaves who built the pyramids and hewed out the Sphinx; prayed for by the men who hung the gates of Thebes; prayed for by the men who built the palaces and hanging gardens of Babylon; prayed for by the men who built the Parthenon and the temples of Greece; prayed for by the men who built the Roman Forum and Coliseum; prayed for by the men who

"Rounded Peter's dome
And groined the aisles of christian Rome;"

prayed for by the men who have built every monument of progress along the track of the centuries since the Ark rested on Ararat. This is not the day prayed for—not the full orb'd day. The present is only the precursor of that day. Therefore we will pray on confident that

A Labor Day is coming, when a workingman
shall stand,
As free, as independent, as any in the land,
When he shall be rewarded for his work of brain
and hand—
The Right is marching on.

A Labor Day is coming, don't you hear the grand
refrain,
Sweeping round the country, from the Golden
Gate to Maloe.
That workmen are free, and have broken
every chain?
The Right is marching on.

A Labor Day is coming, when Truth shall have
full sway,
When Justice, full enthroned, like the noon-tide
god of Day—
Shall set, no more forever:—for its coming let us
pray—
The Right is marching on.

A Labor Day is coming, when our starry flag
shall wave,
Above a land where famine, no longer digs a
grave
Where Money is not master, and a workingman
a slave—
The Right is marching on.

On the great Pennsylvania system, when a baby is on board of its train, the baby wagon is taken free of charge; good.

A. N. TOWNE, ESQ., TO THE UNITED STATES SENATE COMMITTEE ON RELATIONS WITH CANADA.

We have on our table "An open letter," written by A. N. Towne, Esq., Third Vice-president and General Manager Southern Pacific Company. It makes a pamphlet of fifty-five pages. Mr. Towne felicitously introduces his answers to questions propounded by the Senate Committee, when he was before that body, and it must be said that he evinced great familiarity with the subject in hand, and must have impressed the gentlemen who listened to him that something ought to be done in the way of law or diplomacy to make the Canadian Pacific Railway a somewhat less profitable enterprise than it now appears to be.

Mr. Towne refers to the "American people" as "careless of danger unless actually confronted with it; and that it is not until then that they arise in their might against interference or aggression," and in confirmation of this American spirit, says: "The Samoan episode, just brought to a happy and honorable conclusion," etc. The fact is that the "Samoan episode" is believed to have been settled in a way highly discreditable to the United States, and it would, therefore, been just as well to have omitted all reference to it. In fact, we think it would be difficult to point to an instance specially creditable to American diplomacy of recent date. Our diplomats may be showy in a certain sense—that is to say, they put on court togger, seek aristocratic and royal recognition, bow, and scrape, and bend, but when it comes to doing anything creditable for their country they are, as a general proposition, dead failures, and make their country ridiculous. An instance occurs to our mind just now. A Minister Extraordinary and Plenipotentiary to a European Government, who receives a salary of about \$18,000 a year, rents a palace, which takes his entire salary, so that as an American citizen he may put on as much style as the Duke dukes who represent royalty with a big R. Such representatives "abroad" are totally incapable of representing any American idea or interest, and there is a growing sentiment that the whole tribe should be

squelched. If diplomacy is to interfere with the business of the Canadian Pacific Railway, Mr. Towne should use his influence to have practical railroad men appointed, and stipulate that negotiation shall be conducted in some western village, away from the influences of courts and "uppertendum" society, else, as certain as wine cups produce "hikups," the Canadian Pacific Railway will, to use P. R. phrase, send the Americans "to grass," "knock 'em out."

But, turning to home legislation, Mr. Towne sees nothing in the past at all calculated to inspire confidence. He sees in past legislation, so far as it relates to railroads, "embarrassment, financial and industrial legislation of a kind unknown and intolerable in any other industry or commercial undertaking."

Mr. Towne has the faculty of stating propositions tersely, strongly, and clearly. He avoids ambiguity. He is no amateur in railroad matters. A student of railroad problems, he does not become mystified. He has a case and he presents it in a way that a Senator must be exceptionally obtuse if he does not comprehend Mr. Towne's logic. What is the case? Tersely stated it is this: The Canadian Pacific Railway Company is getting away with millions of tons of freight and thousands of passengers properly belonging to American railways, and in doing this great and increasing business it is materially aided by the Interstate Commerce law.

As a matter of course, Mr. Towne wants the Interstate Commerce law modified in certain regards, particularly in the "long and short haul" clause. If this could be repealed, he says:

All practical railway students foresaw that some of the theories embodied in the regulating law must prove a barrier to the more extended usefulness of the roads as public servants; and, the law having now received a fair trial, it has become the settled belief of the great majority of railroad managers and economists, concurred in by well-known commercial men of broad experience and ripe judgment, that at least one section of the Interstate Commerce law can be materially modified without endangering or embarrassing any interest. Indeed, it becomes a grave question whether the greatest good to all would not be best subserved by its *elimination from the law*. That section is the Fourth of the Act, and is commonly known as the "Long and Short Haul Clause."

Mr. Towne is also clearly of the opinion that the following section of the Interstate Commerce law is a serious mistake:

A NATIONAL ISSUE.

In a recent issue of the *Engineer*, (New York), appeared the following:

"That it shall be unlawful for any common carrier subject to the provisions of this Act to enter into any contract, agreement or combination with any other common carrier or carriers for the pooling of freights of different and competing railroads, or to divide between them the aggregate or net proceeds of the earnings of such railroads, or any portion thereof."

Referring to the foregoing, Mr. Towne puts on record the following explanation of the "pool":

Experience has shown that, when the word "pool" was introduced into railroad parlance, a great mistake was made; for the public, careless of distinctions in a subject with which they are but slightly acquainted, at once surmised that a railway pool had some sort of affinity with a pool in stocks or a pool on a race track, wherein mystery, chance and deceit were to be expected and were usual accessories. The railway pool has about it nothing of mystery or chance, but is a plain and candid business understanding between rival transportation companies, having for its purpose the prevention of such *extreme competition* as is ruinous to the railroads and at the same time is a public danger. (*The pool is intended only to regulate competition.*) The very basis according to which the earnings of the pooled roads are apportioned should indicate that the pool is not intended to stop competition.

Mr. Towne is of the opinion if the "long and short haul" section of the Interstate Commerce law, and the section against "pooling" were repealed American railways would be able to compete with the Canadian Pacific Railway, and recover lost business. If this is not done, the outlook for profits is not cheerful.

It is too early to frame a conjecture relative to the course Congress will pursue. To repeal the "long and short haul" section of the Interstate Commerce law and the anti-pooling section would be virtually repealing the law, but it may be suggested that Mr. Towne's open letter will arouse discussion and awaken the public, and the question may become an issue in politics.

The Interstate Commerce bill, in one form or another, was before Congress ten or eleven years. It received what was thought to be the best and the most earnest thought of the country, and if public sentiment has changed, there will be an opportunity offered for its manifestation, in which event, Congress will not be slow to act.

Poor's Manual estimates that more than 936,000 persons are regularly employed by the railroads of the country. If these men can be made to abandon labor organizations as has been done by Corbin on the P. & R., the country will have more than 936,000 slaves.

"First-class American work is not only the best of its kind in the world, but the output for a given plant is much greater. It is not the machine or the methods alone that accomplish this last, but the social status of the workman also. This is an explicable position to foreigners, who do not accord workmen any social standing whatever, but it is a mighty fact here. American workmen do more work because they are more intelligent, and are a part of all they undertake; they have more at stake. They care little about the quality of their beer, but very much about the houses they live in and the clothing they wear. Their great solicitude and anxiety is that their children shall be well brought up and have all the advantages that a free country can give them. This is why the arts flourish here, and why American engineers and American machinists are leading the world."

The foregoing should be read and reread; the facts stated are pivotal. American work is the best of its kind in the world, and American workmen accomplish more than the workmen of any other country. Nor is this all, the social status of American workmen is higher than in any other country. Why do American workmen do more and better work than workmen in any other country? Because they are more intelligent. With this intelligence comes the demand for good houses, good food and clothing, for books, papers, schools and education. Why these demands? That children may be brought up as becomes a free country where workmen are citizens, upon whom devolve great responsibilities of government—the perpetuity of our free institutions and the welfare of rising generations.

The extract from the *Engineer* is suggestive of trains of thought which may be pursued with profit. It brings into prominence the fact that here, in the United States, there are in active operation two antagonistic forces. One represents capital, the other labor. It has become fashionable, when a writer or a speaker makes declarations, calling in question the motives and policy of capitalists to cry out, "Anarchists," "Socialists," "Nihilists," and thus create the impression that workmen are the enemies of society, the enemies of the government and are committed to a reign of terror. Hitherto the trick has been largely successful, but the indications are that the deception has been discovered. The pur-

pose of certain capitalists to reduce wages is no longer questioned, and that the purpose of workingmen is to maintain wages and resist the pauperizing policy of capitalists, is equally pronounced. These are the contending forces. That they are in battle array does not require an affidavit. American workingmen are organizing for the purpose of having good houses to live in, good food for themselves and their families, good clothes; that their children may be educated to act well their part as American citizens. On the other hand capitalists are organizing for the purpose of reducing wages. They contemplate the overthrow of labor organizations, and this done, they regard the work of Russianizing the United States well advanced and easily accomplished.

It must be admitted, that capitalists have many things to encourage them in their efforts to Russianize America. The law-making power of the country has been subsidized, as also the press. The courts have tortured justice into hideous shapes or the same base ends, and looking upon the repulsive spectacle, honest men cry out, shame! Victory after victory has been scored for the capitalists. The attention of Congress has been called to the piratical policy of Austin Corbin and his associate robbers of the Reading Railroad in Pennsylvania, where the work of Russianizing the anthracite coal regions has been practically perfected, and men degraded to the level of beasts of burden. From that fabulously fat land has gone forth the cry of starvation. Men, women and children, have gone forth from dark dens, the abodes of American citizens, degraded to a degree to defy exaggeration. And this famine wail, following the course of empire, is heard in the great central states of Indiana and Illinois. Capitalists have organized, and demand that men shall work in subterranean darkness nine and ten hours a day, and when they refuse to accept pauper wages, quietly look in and say "these miserable wretches, in due time will submit to the logic of hunger, and once conquered, there will be no further trouble with them."

Against this programme, workingmen of the United States, propose such resistance as is possible by a compact organization of

their forces, and never, since Jehoval laid the foundation of His universe, has here been a more righteous resistance to wrong. The workingmen of the United States, propose to vitalize, advance, and enthrone the American idea, that work is honorable and dignifying, and ought to be honestly remunerative; that out of the profits of labor, the laborer shall have enough to live and become Americans, not Chinese, Huns, Italians and Poles or men of any other nationality, who by centuries of oppression have been taught to subsist upon garbage and live like reptiles.

The man who is unable to see that American workingmen are in earnest, who cannot see their final emancipation from the oppression of capitalistic leagues, is blind; and the man who cannot hear the slogan of labor as its hosts are falling into line for their climbing, upward march, is deaf.

Everywhere, on all sides, are to be seen workingmen in alliance with the educating forces of the period; forces that elevate the men, enlarge their mental and moral powers, and which are to make them invincible. We do not underrate the power of the Philistine capitalists nor do we underestimate the power of the Sampson labor. Those who are attempting to bind it down and destroy its eyesight are making a sad mistake, since in the event of their victory they would inaugurate a calamity that would live in history until the leaves of the Judgment Book unfold.

BROTHER TALMAGE talks right out in meeting as follows:

Unless the church of Jesus Christ rises up and proves herself the friend of the people as well as the friend of God, and in sympathy with the great masses, who, with their families at their back, are fighting this battle for bread, the church as at present organized will become a defunct institution, and Christ will go down again to the beach and invite twelve plain, honest fishermen to come into an apostleship of a new dispensation of righteousness manward and Godward. The time must come when all classes of people shall have equal rights in the great struggle to get a livelihood.

The signs of the times pretty clearly indicate that the period for Christ to go to the "beach" again for "honest fishermen" to manage his church, and to inaugurate the new dispensation, has arrived. As matters now stand, its usefulness does not excite admiration or applause.

A PENSION SCHEME.

A telegram from Philadelphia, August 19, said:—

The Pennsylvania Railroad Company is about to adopt a policy toward its employes more important than any in its history. Arrangements are being made to establish a pension system, the first of its kind in the United States, and the step will attract wide attention. The pension plan will be introduced in connection with the company's relief association. At the end of the association's last fiscal year, the third of its history, it was found that there was a surplus in the treasury, after the payment of all benefits, of \$170,789. The existence of this balance suggested the introduction of pensions to superannuated members of the relief association. A special committee of the advisory committee of the association approved the project, the advisory committee itself took the same attitude, and another sub-committee was appointed to propose a plan. This committee met recently at Cape May, and adjourned, after discussing various plans, to meet at a later day. There are certain complications to be adjusted before the pension system can be put in force. Those employes who have put their money into the association did so with the understanding that the fund was to be drawn from only to pay death, accident and sick benefits. If the new plan, involving the payment of pensions as well, shall be adopted, the consent of the members of the association will first have to be obtained, but no difficulty from this source is anticipated. President Roberts has taken a hearty interest in the plans, and has offered to recommend to companies associated in the fund a contribution of \$50,000 to help establish the pension system:

The foregoing ought to attract attention. It is said that the Pennsylvania system has 90,000 employes. Suppose of these, 15,000 are in its insurance scheme, and we surmise the estimate is sufficiently large, then it will appear that for three years, under its insurance scheme, there has been abstracted from the earnings of its employes, \$170,789—an average of \$56,692.66 a year—for which there was no need, and this work of abstracting the money of employes is still going forward.

It is not surprising that the officers of the great Pennsylvania system should realize the extent of the wrong it is inflicting upon its silent and subjugated employes, who like the blue-tailed fly of the song, have been captured, and with \$170,789 belonging to its captive men in its pockets, propose a pension scheme to obscure the varnished iniquity of the insurance scheme.

The two schemes are admirably adapted to the end in view, and that is to secure to the Pennsylvania road a set of employes who can't get away from it. According to the official showing, the insured have, in three years, paid in a surplus of \$170,789 more than was required for insurance. Allowing these surplus payments, with the

same number of men, to go on for twenty-one years; in that event the Pennsylvania system would have at its command the sum \$1,195,460, abstracted from the wages of, say 15,000 employes. But, suppose the Pennsylvania system could induce its entire force of employes to take stock in its insurance scheme, 90,000. In that case it would have in twenty-one years in its custody, the surplus sum of \$7,173,960—money taken from the wages of its employes. At 6 per cent. this money would earn the sum of \$430,425 a year.

If the insurance scheme could produce such results, and the calculation is based upon the official showing that in three years a surplus of \$170,789 has been secured from, say 15,000 men, it is fair to assume that the pension scheme would duplicate our figures.

The beauty of the thing is, that in the management of the insurance and pension schemes, the men who pay the money have just as much to say about it as so many mules—and no more. In preparing the pension scheme we are told that "a special committee of the advisory committee approved the project," that "the advisory committee, itself, took the same attitude, and that another sub-committee was appointed to propose a plan," and that this "sub-committee met recently at Cape May," etc. No employé—that is to say, no working man, was on any of these committees. When the plan is perfected all the workers are expected to "tumble" to it with a "hip, hip, hurrah." True, it is said that if a pension scheme is to be hitched on to the insurance scheme, the men will have to be consulted; but in this "no difficulty is expected"—not any, you bet; nor is it to be presumed that any consultation with the men will be had. If such should be the case, and a kicker should show his head or heels, he will be promptly disciplined, and if that won't do, he will be required to hunt a job elsewhere, and leave his money in the hands of its custodians—his share of the \$170,789.

Railroad employes may profitably analyze the railroad insurance and pension schemes and ask themselves if they are promotive of manly independence? For, after all, there is something in manliness, in independence, in self-respect, in American citizenship, in

the pursuit of life, liberty and happiness; and to be bound neck and heels to a corporation, to realize that one is tied to a certain road, to a certain system of roads, by any bonds whatsoever, is in the line of degradation, and we defy any man to show logically that such is not the case.

We would have railroad employes members of their own organizations, manage their own fiscal affairs and personal affairs, as do other men, and eternally resent all parentalism. In this there is growth, development, manliness, independence and self-respect. In that case a father contemplates his children as his own, and not the corporation's: that he can go where he pleases, and when he pleases, without asking permission or making pecuniary sacrifices. The corporation insurance and pension schemes mean the opposite of all this, and in meaning the opposite; mean the degradation of men.

It need not be said that the schemes are captivating and well calculated to deceive. Such is the case, and all the more alarming because it is true.

The time has come for workingmen to show the stuff they are made of. If of putty, they will yield and cower, and accept the lash. If they are men—

High minded men,
With powers as far above dull brutes endued,
In forest, brake or den,
As beasts excel crude rocks and brambles rude—
Then, they, scouting the corporation oversight and surveillance, will assert themselves, and without dictation from any source, manage their own affairs.

AMERICAN editors are not the only ones who run the risk of having their brains addled by nonsensical questions. Some brilliant Englishman writes to the editor of a local paper to say that he wants to ride one hundred miles in eleven hours, and he wishes to know how many stoppages he is to make, and what to eat and drink. The editor in question could not answer this earnest inquirer, but referred the query to his readers, soliciting their assistance.

TRAINS can now run over the Georgia Pacific road on one continuous line from Washington, D. C., to Greenville, Miss., a distance of 1,110 miles.

LABOR DAY.

September 2d, 1889, Labor Day, was celebrated throughout the length and breadth of the land by multiplied thousands of workmen. It was Labor's holiday. Picnics were in order. Men, women and children went forth from their homes to the groves, to the sunny highlands, by babbling brooks, by silent rivers, bent upon rational enjoyments. There was music and dancing, speaking and feasting. Dull care and toil were left behind, and rest and pleasure ruled the day.

It was a new departure and dates a new regime. It means that in the future, workmen are to have more enjoyment. It means that education and the refining influence of education, are having the effect designed. The movement is full of promise. It betokens "a good time coming" for which so many prayers have been offered up, and which is coming, because workingmen have declared that it shall come.

God helps those who try to help themselves. God never helps a coward, nor did cowards ever win a battle. Labor day presages the eight-hour day. Labor day voices the fact that the hosts of labor are coming closer together. Imaginary partitions are being broken down, and imaginary lines of divisions are disappearing. The bond of union is growing stronger, sympathies, which were but yesterday weak and narrow, are to-day strong and broad. Labor days vitalize principles, exalt truth and speak for an era of justice. Labor days dignify labor. There was a time when the badge of labor symbolized degradation. It is so no longer to men who are not born to wear yokes. The time is not distant when Labor Day, like the 4th of July, will be a national holiday, by virtue of statutes. A labor Sabbath, when in honor of labor and its achievements, all the people shall cease from work and make the day notable by demonstrations of joy and gladness.

E. H. BELKNAP, Esq., editor of the *Conductor's Journal*, when he wants a little poetry, just straddles his Pegasus, goes to the fountain of the muses, and sings like a mocking-bird.

LOYALTY.

The *Railroad Gazette*, of August 2d, has a lengthy article captioned "Loyalty of Employés," which contains much that is wise and timely, and which should have a healthy influence upon railroad officials. We have not space for the entire article, but make room for the following:

The best men to serve a railroad are those who know its needs. When they have this knowledge one of the best means to make them energetic in using it, is enthusiastic interest in the road and its welfare—loyalty to it. Loyalty consists of numerous elements, and in its nature will be better appreciated if we compare it with the more familiar loyalty to country. The soldier of the Republic admires his commander, loves his home and its associations, and believes in his nation's high destiny because he has faith in the principles on which it is founded. Moreover his love for the Stars and Stripes has an intensity which can be accounted for only by assuming that the associations connected with the flag have come to be inseparable from its combination of colors. A railroad man is actuated by somewhat parallel motives. He has a ring of hero-worship in his admiration of his best known superior officer. He will stick to the road he has been on for years largely because his co-workers are friends instead of strangers; this is love of home. He will faithfully work for the interests of the road because of his simple desire to do right—to give an adequate return for the pay he receives. And he will even have a feeling akin to the patriot's love for the national emblem.

We doubt very much if the term "loyalty" as applied to a railroad employé, can be used, except in a very restricted sense. It cannot be compared to the employé's loyalty to his country and his country's flag. A railroad may be a big thing, but it is not as big as the Republic. It has a different Constitution and By-Laws. Its Directors are not a Congress nor a Legislature, and the employé has no voice in making or in unmaking them. A railroad is organized to make money—employés work for it to make money. There is no obligation of loyalty on the part of the employé superior to the obligation on the part of the railroad official to be loyal to the employé. The commander, the flag, the music, pomp and circumstances of camp, etc., have no place in railroad employments. The obligation on the part of the employé is to do faithful, honest work for honest pay. It is the contract. It is the bond of union. There is far more than that in loyalty to country and to country's "stars." Men are so constituted that for kindness, generous treatment, they will return it in a thousand ways. It is the law, a law as binding upon employers as upon employés. As an illustration of "loyalty" on

the part of an employé, we find the following going the rounds of the press:

William Dixon, a section foreman on the Oregon Short Line, on July 15, found a rail in the track, about six miles west of Soda Springs, Idaho, which was out of line on account of the pressure of the adjoining rails. With one man to help him, he undertook to replace it with a shorter rail. They had removed the spikes from the inner side of the rail, and Dixon took a claw bar to pry the rail out of its place. As soon as the rail was relieved from the pressure of the other rails, it sprung as if it was spring steel to a distance of fifteen feet, striking Dixon and breaking both of his legs below the knees.

There he lay, both legs broken, a rail out, a passenger train nearly due, and only one man to help him in his misery and warn trains in time to avert disaster. He ordered his man to get the hand car on the track and help him upon it, and with the broken bones protruding through the flesh, he started down grade, which at that point is heavy, and with nothing but a shovel to push himself along, he set out for the man on the next section, while he sent his man on foot in the other direction to meet the passenger train. Dixon had to go about three miles, and it was about three hours before he could have his injuries attended to. One leg was then amputated and there was hope of his life and the other leg being saved. Later, however, it became necessary to amputate the other leg, and his death followed in three days.

The foregoing is an instance of faithfulness for which the man should have a monument, and his wife be a pensioner of the Oregon Short Line during her natural life.

It was not an instance of loyalty to officials, or road, or the flag of the road. Such things dwindle to utter contempt in the presence of William Dixon's heroism. It was loyalty to that unwritten, higher law of human nature which is in force along all the railroad lines in the land, in the hearts of railroad employés to do and dare all things to save human life, regardless of sacrifices. Now all the Brotherhoods of railroad employés are constantly educating men for such deeds of noble daring. In view of all such facts, railroad officials, if the term "loyalty" is to be used, should be loyal to their employé's—see that they have fair pay for honest work, and our word for it, the vast majority will pay them back in rich dividends of faithful service.

Poor's Manual for 1889 estimates the net earning of railroads for 1888 at \$33,358,668, less than for 1887 and attributes the decrease to strikers. If federation had been in vogue, it is not probable any strike would have occurred at all—and if one had occurred, it would have been of short duration. Federation promotes harmony and insists upon arbitration.

OCTOBER, 1889.

WORKING FOR KNOWLEDGE.

The following from the *Scientific American* will be read with more or less interest:

James G. Blaine, Jr., son of the Secretary of State, is determined to become a practical railroad man, and is not afraid to do any sort of work necessary to acquire actual knowledge of the business. Some time ago he entered the Maine Central Railroad's machine shops at Waterville, under the immediate instruction of the most skilled mechanics in the employ of that great corporation. After mastering the business in its every detail, the young man has now made a new departure by entering the cab of a locomotive and commencing to "fire." He has been given a position on the fast express train between Bangor and Bar Harbor.

The mercury was away up among the nineties when young Blaine made his first appearance on the engine. He was dressed in the ordinary coarse blue drilled overalls and jumper of a railroad fireman. His face had been changed by black coal dust and perspiration until his countenance was hardly recognizable. His hands were black and blistered, but he was sticking manfully to his task, and every one around the depot was crowding to the forward end of the train to get a glimpse of him.

This reminds us of the early career of young Mr. Gilbert Jones, one of the proprietors of the *New York Times*. In order to become practically acquainted with the construction and operation of machinery, he enlisted several years ago as a workman in the Novelty Iron Works of this city. At six o'clock every morning he donned his overalls and left home carrying his dinner pail, trudged down to the East River, and performed his full day's work among the other men. He was active, quick to learn, and was promoted to be boss of a gang employed to put on board and connect the machinery of steamships. The knowledge thus gained has always been of great service to Mr. Jones. The mechanical department of the *Times* has for several years been under his personal supervision. It embraces many costly and complicated printing machines, but by his intelligent direction all are made to run as smooth as clockwork.

The foregoing is an encouraging item to the studious young men in our Order, for it indicates the road to success, which young Mr. Jones has already achieved, and which Mr. Blaine will no doubt attain if he is really in earnest in his pursuit of knowledge, and is not depending for promotion upon the fact that he is the son of his father. The events of coming years will have to decide whether our Order has any reason to feel honored by the choice of the avocation he has made, and whether he has manhood enough to hew out for himself an honorable career through the pick and the scoop aided by an earnest search for knowledge, or whether he is simply to take a better man's place by virtue of the name he bears. To him, therefore, as well as others in our ranks, we would say, *think*, for *Wood and Iron* says with truth,

"The watch-word of advance is think. Remember that one hour's earnest thought upon a subject on which you have been reading is worth ten extra hours of reading upon it. The mechanic who will persistently study and think on his business will not down. He will certainly come to the front."

Intelligent thought is needed in all avocations, and in none, perhaps, more than in the railway service, for it is one of the youngest trades in use, as compared with many others, for we read of Cain as a farmer, of Abel, Jacob, Moses, and others as shepherds, of Nimrod, Samson and David as hunters, of Noah as a shipbuilder, thousands of years ago, but none of these worthies were railroaders, or could, in their wildest fancies, conceive of such a thing. Even many men alive at this time arrived at manhood before railroading was a trade, and such being the case, we are warranted in the assumption that wonderful possibilities are still in store, and that patient study and investigation will develop them. As firemen and engineers we form no inconsiderable share of railroad employes, and as we are ever to be found in the front, amid the smoke and the heat of battle when at work, so may we also be found in the front ranks when at study on the way of reaching a higher plane of "social, moral and intellectual standing," and thus lead the advance in the march of progress. That there is room enough for improvement, all will admit, and the following order will prove it is the case:

(CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA RAILWAY COMPANY.)

GENERAL SUPERINTENDENT'S OFFICE,
ST. PAUL, MINN., June 24, 1889.

M. Ellis, M. M. St. Paul Shops:

DEAR SIR.—1. Situated at a long distance from coal-producing territory, the coal consumed by locomotives has been so large a proportion of operating expenses of this road that it has become our duty to take vigorous measures to lessen amount consumed. Extravagant, irregular and careless firing will, however, defeat every effort we make toward economy in fuel.

2. It is a common practice for some firemen to throw a large amount of coal into furnace at one firing, thus making fire so deep that it cuts off air supply that should come through grates, and in consequence the coal on top is rapidly coked by heat underneath, and gas and smoke (the very cream of the coal) escapes unconsumed. An equal amount of coal placed in furnace in three or four firings instead of one would in many instances evaporate more water and almost entirely avoid the emission of black smoke from stack.

3. A matter of great importance is proper admission of air to furnace. Dampers should be regulated to govern this. When too much is admitted, temperature of fire box is lowered, with consequent loss of steam, and when not enough air is admitted much of the coal becomes coked, caused by improper combustion in fire-box. Amount of air admitted should be in proportion to quantity of coal and steam used, and as this varies with load hauled, grade ascended, and speed, so also must supply of air and fuel vary, and engineers should see that both are fed to furnace in a regular and careful manner, always proportionate to work done by locomotive.

4. Enginemen should see that coal is properly broken and wet down before firing, and that it is distributed equally over grate surface.

5. The frequent "blowing off" of locomotives caused by excess of steam, is an indication of carelessness and waste of fuel, and denotes a reckless disposition of enginemen, so far as life and property are concerned. Frequent accidents are caused, and many large damage claims have been paid by this company on account of sudden and unexpected opening of escape valve, frightening people and horses; and as is well understood that it can nearly always be avoided, we have determined that it shall now cease, especially at stations and in yards.

6. It is but just to a large per cent. of our enginemen to here state that criticisms above set up do not apply to them, as in my frequent trips over the system I discover their engines properly handled, and in my careful examination of reports know they are interested in fuel economy and all other matters above referred to; but there is, unfortunately for us, a certain per cent. of the men to whom they forcibly apply, and I sincerely hope these will give the suggestions above noted their closest attention, and post themselves fully on all points governing economy of fuel, and I desire you to have a distinct understanding with our engineers and firemen that hereafter those who show best record for economy in dealing with the company's fuel and other supplies will be the men first selected for promotion, all other qualifications being equal. I believe we can run more miles per ton of coal than is now being done, and am confident that we have a class of men who are capable of doing it if they only try, and the time has now come for their best exertions in that direction.

7. A very meritorious work, in small book form, has been recently issued on combustion in locomotive fire-boxes, by Angus Sinclair, of New York, and you may say to such enginemen as have not possessed themselves of, and would like to have it, that if they will hand in their names to you this company will subscribe for them at its own expense.

W. A. SCOTT, General Superintendent.

Mr. Scott has evidently found "extravagant, irregular and careless firing," and equally "extravagant and irregular running," and hopes by this order to induce the men to think and to practice economy in fuel, the bill for which forms "so large a share of the operating expenses." Mr. Scott gives some good points on the creation of steam by proper firing, on the saving of it by not allowing it to escape without doing work, and getting all the work out of it that is possible by "taking advantage of its expansive qualities," and offers to supply his men with Mr. Sinclair's book on combustion. All this is very good, but we would suggest that making the men participants in the profits derived by their economy would, perhaps, be found a greater inducement to many, and as it is not a new or untried plan, and has no patent on it, it is worth a trial, and may achieve for other roads what it did for the road below mentioned: "The Buffalo, Rochester & Pittsburgh introduced premiums to enginemen for coal and oil saved about six months ago. When the system was first introduced only one engineer on the road was able to run his engine with less than the allowance of coal. Nearly all the crews now earn premiums, and a very material saving of fuel has re-

sulted to the company. The men get half the value of the coal saved and the company the other half. The engines are much better fired since the premium system got into good working order, and there is not nearly so much smoke to be seen issuing from the smoke stacks of the engines as there used to be. Many enginemen persist in believing that the prevention of smoke is impossible, but when they receive strong inducements to do the work with the least possible expenditure of fuel, they generally give practical demonstration that the smoke nuisance can be almost entirely abated."

*

THE READING ORGANIZATION.

The following editorial article from the *American Machinist* reflects strongly upon the conduct of Mr. Corbin in attempting to suppress organizations formed by his employes, while claiming the right to organize and perfect any number of schemes to enrich himself and his intimates at the expense of others:

Of course no one doubts that the president of the Reading Railroad system, Mr. Austin Corbin, believes in organization among men who, having the same object in view, are able by means of their organization to attain that object more easily, or in a more perfect manner than would be possible without organization.

The prominent part which Mr. Corbin has taken, and is taking, in various organizations, is proof that he thoroughly believes in them as a means of making money, which seems to be the sole aim of Mr. Corbin's life.

What more natural, or more to be expected, than that the workmen employed by the various organizations to which Mr. Corbin belongs should, seeing his remarkable success with them, desire to try the plan for themselves? They conclude to do so, but have no sooner got fairly started than it is made apparent that Mr. Corbin does not believe in all organizations, and is strenuously opposed to allowing indiscriminate organization among men by whomsoever may happen to think that their particular interests may be conserved thereby; evidently believing that this matter of organization is a thing which can be carried too far—at least in certain directions—that there is need of some restraint—some control over the business of forming organizations, and, moreover, that he, Mr. Austin Corbin, is the very man to decide what particular organizations are improper, and to suppress them. He accordingly informs the American citizens, or, in other words the "uncrowned kings" who labor in the employ of his organizations, except the Reading Railroad, the Reading Coal & Iron Co., the Reading Iron Works, etc., that henceforth he himself, Mr. Austin Corbin, will attend to all the organizing, and that it is their particular business to attend strictly to their work, and accept without a murmur the compensation decided upon by Mr. Corbin and his fellow organizers as being the proper amount, and that employment can only be secured or retained upon condition of renouncing membership in all organizations not approved of by him.

Of course, no one who has paid the least attention to the course pursued by the organizations which Mr. Corbin has endorsed, and which are managed by him, will for one moment entertain the idea that his opposition to a given organization may be founded upon apprehension that it may become a law-breaker; may engage in dis-

honest or dishonorable practices; may, by the use of money, corrupt legislatures, and secure the passage of laws detrimental to the interests of society; may corrupt the courts, and thereby practically annul laws duly enacted by the representatives of the people in their interest, or may be so managed as to enable its officers to defraud and rob the ordinary lay members. Instances are plentiful which go to prove that such things meet with the entire approval of Mr. Corbin, when they are managed by organizations which he controls, and result in turning money into his pocket.

The report of a Committee of Congress, which we have before alluded to, and the testimony contained therein, though we have no idea that it exposes all the rascality which Mr. Corbin has perpetrated by means of his organizations, exposes so much of it that one would think that, if he were not entirely lost to the sense of shame, and absolutely reckless of the opinions of his fellow men, as well as of the security and peace of society, he would subside and endeavor to attract as little attention as possible. But the trouble with Mr. Corbin, and men of his class, seems to be that they think they can afford to despise, and ride rough-shod over society and its laws, if only they make sufficient money by so doing; imagining, apparently, that if worse comes to worst, and society should determine to rid itself of their tribe at any cost, the government will step in and protect them from harm, forgetting that the government derives its power and authority from the people, and that, when a sufficient number of them unitedly determine to do a thing they will do it, their right to do so being clearly recognized and declared in the preamble to the Declaration of Independence, which was and is the real foundation of our Government.

We do not wish to appear in the role of alarmists, but we sincerely believe that a way must be found to suppress the tribe of Corbin. We hope and believe that a peaceable and lawful method of doing so will be discovered; but in the meantime they are a greater danger to society than all the common thieves and thugs in the country, and here is but one good reason in the world why men should organize with the object of securing what they desire, it is to be found in the fact that Austin Corbin is opposed to it.

While the *Machinist* is a peaceable, law abiding member of the "body politic," it yet sees that there is some danger, that the bounds where "forbearance ceases to be a virtue," may be reached, when the people shall rise in their might to assert their rights, and "suppress the tribe of Corbin." A few men assembled a little over a hundred years ago and organized what King George called treason, but their names have gone to posterity with imperishable glory for the courage with which they declared their "inalienable rights" to "life, liberty and the pursuit of happiness," and the success which attended their efforts in obtaining these rights, and handing them down to succeeding generations. Now, another King (Corbin) calls it treason if his "subjects" dare to organize in any manner and under any name, but he may find like his prototype of old, that he has transcended his prerogatives, and outraged public opinion to such a degree that even the most radical measures for his suppression and removal from power will be sanctioned and approved by the people who love liberty and justice.

RUNNING TRAINS ON THE SABBATH.

The following editorial article from the *American Journal of Railway Appliances*, is worthy of attention as it puts the vexed question of Sunday work in a very forcible manner, and fully concurs in the opinions already expressed in these pages:

The recent reduction of Sunday traffic on some of the trunk lines is a very gratifying evidence that railroad managers are giving attention to this all important subject. Yet the demand for Sunday rest is not moving the railway world as it should, and there must be a continued and persistent agitation of the question by those who have rights at stake, and by those who recognize the inflexible nature of the Divine law, until in all our broad land there shall not a car wheel turn on Sunday.

It is becoming altogether too common to excuse the sin of Sabbath work on the claim that it is necessary from the complex nature of our advanced civilization, and that the law was not intended to fit our times as it did that of old. It is difficult to believe that any intelligent railroad manager or superintendent can seriously entertain the idea that railroad work compels men to break the Lord's day. For they would then occupy the fearful attitude of impeaching the Divine wisdom, in charging God with foolishness in requiring men to "keep holy the Sabbath day," and yet ordaining a physical law, or a law of civilization, to abrogate or nullify His spiritual law. There can be no conflict between moral laws and laws of material progress, for both have the same source in one Creator. No. They do not believe their claims. For they know it is quite practicable to rest nearly every one of their men on that day.

The changes are rung quite too frequently on "Works of necessity and mercy." The Savior commended the removal of an ox or an ass from a pit on the Sabbath, but He never commended the scheme of putting them into the pit on Saturday that they might pull them out on Sunday in order to have something to do. The men who work under the direction and control of a railroad company are under the same Divine law of duty and privilege as every individual of that company; and its neglect involves a moral wrong to themselves, which must be shared in largely by those who are directly or indirectly responsible for it.

We do not intend to imply that railroad managers are "sinners before the Lord exceedingly." All we urge is that they are not giving this great question the attention its importance demands. There is no more prominent fact taught in sacred history than that nations have been punished more severely for profaning God's Sabbaths than for any other cause. We confidently submit, as we have done before, that by Sabbath rest in railroad work great saving would follow. That a faithful effort to rest on this day would reduce the expenses of repairs and maintenance of rolling stock and appliances, secure more regular work and largely reduce breakages there can be no doubt. It would also be followed by better work during the week—more vigorous, clear headed and sustained.

That a faithful effort to rest on this day would reduce the expenses of "repairs and maintenance," "secure more regular work," "reduce breakages," "followed by better work during the week—more vigorous, clear headed and sustained," is true. It points out the fact, that the laws for the observance of the Sabbath, and our present advanced civilization, both originate from the same immutable and all-wise Being, who would not, like frail and finite man, be obliged to change his laws

to suit the times or the place, but foreseeing and knowing all, had wisdom enough to make laws applicable to all times and all places. It also makes a good point on the "work of necessity and mercy" plea, by suggesting the impropriety of "putting an ox or an ass into a pit on Saturday, that they might pull them out on Sunday to have something to do." Observance of the day is thus urged for several reasons, most prominent among them being that it is God's command, and that in obeying it, we not only fulfill his will, but are sure to be blessed in every way—the employes by having better health and strength with clearer heads and brains and the companies by having better servants in every respect than they would otherwise have. This view seems also to be taken by others for at a union meeting of the Brotherhood of Railroad Brakemen and Locomotive Firemen, held at Bloomington, Ills., July 24th, the following resolutions on Sunday labor were adopted:

WHEREAS, The Sabbath was ordained for man and

WHEREAS, All history shows the best state of society and the highest and best civilization when the hours of Sabbath were devoted to rest and a relief from labor, therefore, be it

Resolved, That, we, as railroad employes, ask of the general public to forego Sunday travel on railroads, and the demanding or requiring managers of railroads to run Sunday trains for freight traffic, to the end that we, who are willing to give six days and nights of our time to the faithful service of the public and to our employers, may have the hours of the Sabbath with our families at our own command, for the great good and comfort to ourselves from being at home with our families, and for church, Sabbath school and other privileges the Sabbath is designed to bring to us.

Resolved, That we tender our sincere and hearty thanks to those presidents and managers of roads who have recently issued orders curtailing Sunday work, and we most respectfully ask all other managers of roads to follow their example.

Resolved, That, as workingmen, we feel that we can do better service during the six days of the week when we are permitted the rest and any recuperation that the Sabbath was designed to give us.

Resolved, That we, as railway employes, pledge ourselves to be of the best possible service in our power to the several railways which employ us, and to regard the interests of our employers when they show an interest in our best welfare by giving to us the best possible safety appliances and as much of Sunday rest as the exigencies of railway transportation will admit.

Let us therefore hope, that the agitation on this question now begun, may continue and spread, until it shall reach and permeate all railroad managers to such an extent, that they shall be willing to give their men one day's rest in seven, that the traveling and shipping public will submit and cheerfully acquiesce in this arrangement, we do not doubt, and that the men will make the proper use of the Sabbath when they do obtain it and thus prove that we are not yet so far advanced that God and his laws may be ignored.

Written for the Firemen's Magazine.

CONCLUSIVE EVIDENCE.

BY HESSIE MORGAN;

Author of the "Cap'n's Monnymet," etc.

"My name was Robert Kid, as I sailed, as I sailed, as I sailed,
My name was Robert Kid, as I sailed,
My name was Robert Kid, God's laws I did forbid
And most wickedly I did, as I sailed."

"No sich a person as Kid? Cap'n Kid?"
I wonder what folks 'll say next. No sich a person. Why, I've knowed 'bout him ever since I kan remember. There was one of his money holes right on the farm where I was brought up, in Connecticut. 'Twas on the river, an' folks was arter him, so he sailed in an' landed, an' buried his treasure there on the side hill.

I've been told the whole story time an' agin. I guess I know's much 'bout it as any body. Don't I know how it's been searched for, an' searched for? I dug for it once myself, me an' Rachel Beswick. Didn't find nothin'? Well, I guess we did. Yis, I'll tell you 'bout it, but it's a long story, an' I don't hardly know where ter begin.

'Twas when Rachel Beswick, an' me, was 'bout eighteen—we was both of an age, Mis Pelham brought us up—Squire Pelham's wife. Rachel was her sister's child, an' she took her when she wa'n't no more'n a baby, an' I went ter live with 'em when I was 'leven year old, ter help with the light work, an' look arter Rachel.

The Pelhams didn't have no children o' their own, but they thought a sight o' Rachel, an' she was a dreadful pretty girl, fit ter marry a prince, an' Square Pelham was so ambitious, thinks likely he thought she'd git one. It made him awful mad when he found out 'bout Sam Royce wantin' her.

Sam was a likely young man, he followed the sea, you know, an' in them days it paid better'n it does now.

But he didn't have no money laid up ahead, he had ter support his father 'n mother, an' his father was unfortunate, allus havin' losses an' gettin' cheated. Seemed ez ef he was in trouble every time Sam come home.

But Sam he never complained, he'd fix the old man up, an' make him comfortable 'fore he left him, ef it took every cent he had, as it did, often an' often. Then off he'd go to sea agin ter begin all over new.

Well, this summer I was tellin' you 'bout, he was home longer'n usual, an' he see a good deal o' Rachel—the young folks was round together you know, an' I reckon he was kinder driv inter goin' further'n he meant ter, fur he was a dreadful honorable young feller, an' he knew he hadn't got nothin' ter offer a girl.

Any how, the night 'fore he went away, he come 'long past the house, an' Rachel

was out 'n the dusk, leanin' on the gate. She knew he was goin', an' it's likely she was thinkin' 'bout it, but when he stopped, an' spoke ter her, she answered him cheerful ez could be; you wouldn't 'sposed she cared 'tall.

"You must be sure ter be back time fur the Sunday school picnic," sez she. "Why?" sez Sam. "O I forgot," sez she, "You've been round the world so much you couldn't be expected ter care fur our modest festivities. It's askin too much of you."

"I care fur anything where I can get your company," sez Sam, then he caught his breath, and went on quick, "I don't know's ez there's any reason why I shouldn't tell you I love you—I aint askin' you ter marry me. I shant never do that, without I've something ter offer worth you takin' an' I don't spose there'd be any chance fur me then, there's too many other fellers arter you, that's got every thing ready an' waitin' to their hand, but they can't love you any better'n I do, Rachel, an' I shall keep on lovin' you till I die, an' some how I kinder thought I'd like you ter know it, that's all." An' then he went right off, 'thout so much ez sayin' good evenin'.

Square Pelham, he see him out there takin' ter Rachel, an' he put on his tall hat, fur he never wore no other kind, an' took his cane, an' he started down ter the gate.

Well, he come up jest in time to hear Sam say he should allus love her, an' he thought Sam went off 'cause he see him comin'. But bless you, Sam never noticed him, an' wouldn't a run, ef he had.

But the Square thought he seed the whole thing plain ez day, he didn't say nuthin' ter Rachel, further'n mentionin' that 't was getting damp, but she understood what he meant, an' come inter the house, an' told me all 'bout it. For we was like sisters, though she was a young lady, an' eddicated, an' I had ter work for my livin'.

She told me all Sam'd said ter her, an' then she put her head down on my shoulder an' cried, an' cried,—for every body knew how good Sam was, an' what a hard time he had.

But right in the midst of it, she held up her head, "I should a told him no, ef he'd arst me," says she, an' I knew she told the truth, his *not askin'* made all the difference, but I didn't say nothin', no more'n the Square.

I guess you think I've forgot all 'bout Kid's money hole, but I'm comin' ter it, I've got ter tell my story my own way.

The summer passed on, till it got ter be most time fur Sam ter be back, when one day Rachel come ter me all worked up. Somebody 'd been tellin' her that the man old Royce's farm was mortgaged to was goin' to fore close. 'Twas kind of a mixed up story—I couldn't make much of it, but then

I don't pertend ter understand how the law comes in 'bout such things.

Old Pomfret Rogers had got the papers ter show, ter prove that the money was *due*. But then agin, old Royce said that there was papers, only he couldn't find 'em, that would prove Sam'd paid most all the money, an' was ter be 'lowed ter wait till he got home, ter settle the rest on't.

Well, every body knowed 't was just like old Royce ter a lost his papers, an' jest like Pomfret Rogers ter make him pay twice, ef he could, but Rachel was mad enough. "Poor, old man," she said, but I knowed she was pittyin' Sam for havin' another fuss all ready far him soon as ever he could git home.

"I wish I had any money of my own," sez she, we was sittin' in the front door, listenin' ter the Katydid's. It was gittin' pretty well long inter September, but the evenins' was mild, an' pleasant as could be.

"I spose we've as good a right ter Cap'n Kid's ez the boys," sez I.

"What do you mean?" sez she.

An' then I up an' told her, how when I was feedin' the chickens, jest arter dinner, I heard the men folks talkin' out'n the wood pile, where they was takin' their noon-spell.

Seems they'd been diggin' for Kid's money the night afore, an' had got scared. They all on 'em said they wouldn't go back, an' try, agin, for all the money that was buried there. They was certain they was in the right spot, for one on 'em, Ed Pratt his name was, had all the directions from his grandfather, who'd dug there himself, when he was young. Well, they was workin' away, feelin' pretty sure o' gettin' the treasure this time, when all ter once a white animal, 'bout the size o' a fox, with a big bushy tail, bounced right out o' the bushes in front on 'em, an' they was so scart they just throwed everything down an' took to their heels.

You see 'twas *said* Cap'n Kid had one o' his crew ter help him hide his gold, an' when the hole was dug, cut his head off an' buried him with it. For he was a dreadful onscrupulous man, an' didn't want nobody but himself ter know nothin' 'bout where he put it.

So when Ed Pratt, an' the rest, see that white creetur comin' at 'em, they thought much as could be 'twas the ghost o' the murdered pirate, a guardin' the money, an' it kinder made 'em nervous. But I thought then, an' I think still, that 'twant nothin' but Widow Perkins' white cat. She lived up there on the Big Hill road.

Well, I said, an' Rachel 'greed with me, that the reason folks had such luck 'bout findin' anythin' was 'cause they worked themselves up so with their superstitions that they was scart ter death 'fore they be-

gan. Either the money was there, or 'twa'n't, an' you could find jest as well in broad day light as in the middle o' the night, an' no need o' sayin' the Lord's prayer backwards neither.

But they'd got the hole half dug, what was ter hender our goin' an' finishin' it the next arternoon? The tools was all there, an' folks could think we'd gone ter git haze' nuts.

Rachel she 'greed an' we went. The money hole was in a lonesome place, one side o' Big Hill, 'twas a rocky spot o' ground with trees, an' bushes growin' all over it. Rachel an' me used to go there in the spring to get the sap o' the wild grape vines for our complexion. Good for 'em? Well, I guess it must a ben, folks used ter say we had the harnsomet skins in the county.

We found the spot arter some huntin'. They'd dug quite a sizeable hole, an' left their hoes and spades there all convenient, so we took a good look, ter make sure there want nothin' in sight, an' we went ter work.

That kind o' labor was new ter us, an' we both blistered our hands, but we kep at it. The men had dug it long, ez ef 'twas a grave, an' we went on as they'd begun, 'cause we knowed Ed Pratt was goin' by his grandfather's directions. But time we'd got it four feet deep, we was clean tired out, an' we made up our minds we'd come another day an' finish.

So we dragged dry brush cross the top, an' covered it up, so 't nobody would a knowed 'twas there, an' we hid the spades, an' went home.

O Land! What foolishness it does seem to look back on, but we was earnest as could be 'bout it.

When Rachel an' me got home, we found Sam's father'd come in ter see if the Square wouldn't help him. Old Rogers was goin' ter turn him out next day, an' arter Sam's workin' so hard, an' never spendin' no money on hisself, fur him ter come back an' find 'twas all lost, an' he hadn't even a home ter come ter. It did seem tough.

But the old Square he wouldn't have nothin' ter do with it. He told Mr. Royce ef he really b'lieved he'd got papers ter prove the mortgage was paid, he'd better hunt 'em up. There was nothin' ter be done 'less he found 'em, an' from his tone I couldn't help thinkin' he meant us ter understand that he kinder doubted there ever havin' been any ter lose.

Rachel she listened a minute, then she turned pale as a cloth, an' went up ter the Square, an' says she, "Please help 'em, Uncle." But he only looked blacker'n a thunder cloud, an' told her she didn't understand nothin' 'bout the case, the law must take its course. I knowed what was the matter with him, but Rachel never guessed—'twant likely her interference was goin' ter do no good.

But her heart was most broke, thinkin' o' Sam. I told her it 'peared to me the only thing we could do was ter try once more for Kid's money. I knowed 'twould take up her 'tention if we didn't find nothin' an' Miss Pelham was off visitin' her sis'er—Miss Romange, the only one she had livin'—so there want nobody to take care o' Rachel but me.

On our way over ter the money lot, next day, we passed Mr. Royce's. He was standin' in his door an' come out an' spoke ter us, 'cause he knowed we had sympathy for him.

He said Rogers hadn't been there yit, though he'd ben 'spectin' him all day, an' had got ready fur him, fur's he could. Spose he must be meanin' ter turn him out jest at night, he didn't know what else, but he was goin' ter hold on long's he could, fur Sam's sake.

"I wish it was in my power ter help you," said Rachel, an' then we both shook hands with him, an' went on.

But when we got most ter the place we hear a sound o' talkin'.

"Somebody's there," said Rachel. "Do you suppose they've come, an' dug in our hole, an' found the money?"

We felt real bad, but we kept behind the bushes, an' crept up, soft's we could. The nearer we come, the more we couldn't understand it, for there want nobody in sight, but the talkin' went on, an' groanin'. Then all ter once it bust out loud. It seems as ef we must a dug deeper'n we thought, for the language 'peared ter come from the mouth o' the pit—such swearin' was awful to listen to.

"Somebody must a fallen in," sez Rachel, an' we come up kinder careful an' looked over the edge, for we couldn't help 'memberin' 'bout the murdered pirate, an' wonderin' ef 'twas him we heard.

But all we see was old Pomfret Rogers, with his leg doubled under him, lyin' on his back, an' goin' on as ef he was possessed. 'Twas plain why he hadn't served a warrant on no body that day.

"How did you come here?" sez I, pretty sharp, for I didn't have no f-el'in' for him 'tall. But he didn't make me much of an answer. We found out afterwards that he'd heard 'bout the tools our men'd left there an' thought 'twould be a smart thing ter come an' git 'em.

O ef we didn't have a time pullin' him out o' that hole. Twice we most got him up ter the top, an' he begun to swear agin—I s'pose it *did* hurt him bad—but we had ter drop him, we couldn't hold onter a man that was talkin' like that.

Finally we had ter tell him he *must* control hisself ef he ever 'spected ter git out alive, an' I guess he see 'twas so. We come near breakin' his neck the last time we

dropped him, for he kinder held up a bit, an' then we man'ged it all right, which shows a man ain't no more 'bliged to swear when he's hurt than a woman.

Well, we couldn't stop ter dig that arternoon, though I *did* take time ter cover the hole up agin, so'st would be safe for another day.

Then somehow we got old Rogers up the hill ter the road, and when a cart come 'long we sent him home. But 'twas a good long while 'fore he was 'round botherin' folks agin, an' Sam he got home a day or two arter, an' he straightened out that mortgage business pretty quick. But we hadn't had the last o' the money hole, by a good deal. Ef you'll b'lieve me, Square Pelham got in-ter it next, not long arter old Rogers, an' he'd a stayed there, too, ef it hadn't ben for Sam. It happened this way.

Late one arternoon, the Square was drivin' 'long the Big Hill road, an' what did he see but Widder Perkins' cows in the money lot.

They'd got in over the fence; wa'n't nothin' there they could damage, but the Square he never 'lowed no trespassin' on *his* property.

So out he got, with his tall hat an' horse whip, an' went arter 'em. He wa'n't thinkin' 'bout the hole—though he knowed old Rogers got hurt there—he was kinder mad, an' steppin' 'long pretty lively, when all ter once, ker-thump. Down he come, an' he was hurt bad; he couldn't stir, he called an' he shouted, but there wa'n't nobody ter hear.

'Twas arter sundown, when Sam come 'long, he see the Square's horse drawn up, side the road, an' the bars down, an' he mistrusted what'd happened. He hurried down ter the money hole, an' sure 'nough, there was the Square, with his tall hat stove in, an' all in a heap, an' from what I could find out I guess he wa'n't using much better language than old Rogers.

Sam he lifted him out, gentle as could be, 'twas lucky he was a powerful young feller, an' the 'Square was a lean spare man; he carried him in his arms, jest ez if he'd been a baby, up ter where he'd left the wagon. But there they found the horse'd got tired o' standin', an' gone home, sayin' nothin' ter nobody.

'Twas kind of a fix, but Sam, he kept on, an' he carried the Square the rest o' the way home. 'Twant easy work, for he groaned an' found fault at every step. But Sam never regretted that job, I can tell you, for the Square he didn't forget it, an' he wa'n't one ter do things by halves. He helped ter git Sam command o' a ship, an' shortly arterwards he gin him Rachel, inter the bargain.

All this don't prove nothin' 'bout Kid? Well, I should say it did. Ef it hadn't ben for him we wouldn't a dug that hole, an' then we wouldn't a caught old Pomfret Rogers an' the Square; an' Sam wouldn't never a got Rachel. Didn't find no money?

The Square left all he *had* ter Rachel an' Sam. I don't know what you call that.

GOD-SPEED.

TO MR. GEO. W. HALL.

YOU asked that those your rhymes have cheered
Would send to you a line,
To tell their thoughts about your verse,
Well, comrade, here is mine:

Your "whistle" sounds a clear, true note
That's very sweet to hear;
It cheers us tolling up life's grade
And warns of dangers near.

To write, you say, for you is hard,
And costs you anxious pains.
True labor spent gives added strength,
Light toil brings little gains.

Better one drop of crystal dew,
That wets the robbin's bill,
Than all the Dead Sea's lifeless flood
That only scatters ill.

Better to sing one simple song
That touches one soul's need,
Than write a ten edition book
That one should blush to read.

Though fame and fortune pass you by,
Your lot, sure, might be worse
Than that of helping weaker souls
Through consecrated verse.

Max Martin.

Letters and Papers pertaining to Locomotive running, firing and management and other topics of interest to locomotive engineers and firemen are solicited for this department.

Correspondents are required in all cases to give their real names, not for publication necessarily, but as a guarantee of good faith.

Communications should be plainly written on one side of the paper only, and as brief as possible. No matter should be introduced for illustration or otherwise that does not have a bearing, directly or remotely upon topics of a mechanical character.

Contributions to this departments should reach the Editor not later than the eighth day of each month to insure publication in the next ensuing number, and should be addressed to

MECHANICAL DEPARTMENT,
Locomotive Firemen's Magazine,
TERRE HAUTE IND.

OCTOBER, 1889.

Looking to Weighing the Hammer Blow of a Locomotive Driver.

MR. EDITOR:—It affords me much pleasure, and very great satisfaction to read the most worthy tribute of Mr. A. J. Rauch to your Mechanical Department, in September *Magazine*, page 782, and which "Eccentric" has asked you to repeat and emphasize in italics.

On the subject of which the above title to this article is the heading, I have had very much to say in the three years and six months I have been writing for the Mechanical Department, that I have been tolerated by you is the best evidence of one of two things, your exceeding good nature, or that there may be something new in what I may have had to say.

It is now the intention of the writer, and those with whom he is associated to bring this subject matter to the attention of railway companies, railway commissions, steel, rail manufactures, locomotive builders, legislative railway committees, state and national, to the end that a reasonable subscription from such sources may determine so important a question. In behalf of those whom I represent, we have to say that we have demonstrated, after forty thousand miles of service, a remedy for this defect in locomotives, and we enter such a locomotive for the test herein referred to, as follows.

William E. Lockwood.

LOCH ARIE, September 4, 1889.

PHILADELPHIA, September 1, 1889. }
251 SOUTH THIRD STREET. }

DEAR SIR:—Enclosed please find a blank form asking a subscription from your company for

the purposes therein named, "Determining the quantity of the Hammer-Blow of a Locomotive's Driving Wheels." This was published in full with illustrations in *Magazine* for June, 1887, pages 339-342. There are herewith enclosed in further explanation, the "Authorities on the Hammer-Blow of a Locomotive's Driving Wheels;" and articles on the same subject matter from the *Journal of the Brotherhood of Locomotive Engineers* of March and June, 1889.

Your especial attention is called to the report of the Joint Committee of the Franklin Institute, and the American Railway Master Mechanics' Association, page 5 of the "Authorities on the Hammer-Blow of a Locomotive's Driving Wheels."

The undersigned is advised, and is also of the opinion, that the magnitude of the subject matter is of such vital importance to railway interests, that this undertaking ought not to be commenced until the subscriptions amount to the sum of twenty-five thousand (\$25,000) dollars.

Kindly name the amount of your subscription on the enclosed blank, and mail the same to Dr. W. H. Wahl, Secretary of the Franklin Institute, No. 15 South Seventh street, Philadelphia, obliging the undersigned by advices that you have done so.

Respectfully yours,
WILLIAM E. LOCKWOOD.

To

No.

The undersigned hereby agree to contribute the sum set opposite our respective names, to the Franklin Institute of Philadelphia, Pa., towards a fund for the purpose of determining the quantity of the so-called "HAMMER-BLOW OF A LOCOMOTIVE'S DRIVING WHEELS," in accordance with the recommendations of the Franklin Institute, and the American Railway Master Mechanics' Association.

The Franklin Institute, has by resolution of date, January 16, 1889, consented to become the custodian of the fund above referred to, as follows:

THE FRANKLIN INSTITUTE OF THE STATE OF
PENNSYLVANIA FOR THE PROMOTION OF
THE MECHANIC ARTS.
PHILADELPHIA, January 17, 1889. }

Founded 1824.
Office of the Secretary.

Wm. E. Lockwood, Esq., Philadelphia:

DEAR SIR:—At the stated meeting of the Franklin Institute, held Wednesday, September 19, 1888, the Secretary presented a communication from yourself relative to the construction and use of a dynamometer to determine the amount of the "Hammer-Blow of Locomotive Driving Wheels."

This communication was referred to the Committee on Science and the Arts.

At the stated meeting of the Institute, held Wednesday, January 16, 1889, the Secretary reported to the meeting the following resolutions embodying the action taken by the Committee on Science and the Arts on the said communication at the meeting of the Committee, held December 5, 1888, viz:

Resolved, That the Committee on Science and the Arts to which was referred the communication of Mr. Wm. E. Lockwood, respectfully recommends that the Institute shall construct and take charge of the Dynamometer and appurtenances for making tests of the quantity of the Hammer-Blow of Locomotive Driving Wheels, in accordance with the plans suggested by the Joint Committee of the American Railway Master Mechanics' Association and the Franklin Institute; and that the Institute shall render all the aid in its power to make the said tests and to report upon the same; provided, that the Institute shall not be at any expense in the matter.

On motion, the foregoing report of the Com-

mittee on Science and the Arts was adopted by the Institute, and the recommendations contained therein were approved.

In transmitting the above as the action of the Franklin Institute in the matter of communication of September 19, 1888, I have the honor to remain, dear sir, Your obedient servant,
[Signed], Wm. H. WAHL, Sec'y.

Wave Power Lines Considered.

Answering Messrs. A. H. Tucker and "Eccentric."

"LET'S SEE YOU MAKE ONE."

MR. EDITOR.—Years ago, not a thousand miles from Boston, Mass., when Judges, like other mortals of the times, had their sideboards well stocked with good old brandy, sherry and Madeira, subscriptions to build churches were made in so many gallons of rum, and even the Connecticut babies were weaned on "mild Santa Cruz rum," Jamaica being "too raw and strong," there lived a noted Judge who, after court and a good dinner well seasoned with the aforesaid liquors, took his accustomed stroll along the fashionable thoroughfares. The degree of mellowness of his condition was indicated by the closeness of the brim of his hat to his nose, seemingly to hide from passers-by his apparent condition. Inspired by the idea that his headgear needed renewal, he entered a fashionable hatter's shop. Slightly reeling, he came in contact with the counter, which gave him a lurch forward, crushing his beaver in contact with the person of the attendant behind the counter. Gaining his equilibrium, adjusting his hat and assuming his wonted dignity, he inquired of the attendant:

"Young man, do you make hats here?"

Young man—"Yes sir."

Judge—"Let's see you make one."

In all mechanical questions theoretically considered, there are "doubting Thomases," who exclaim, "Let's see you make one," or say, "Let's see you do it." This, then, seems the task which my good friends, Messrs. Tucker and "Eccentric" have set for me. See *Magazine*, August, 1889, page 694.

Again I must ask your indulgence and spare in the re-use of illustrations heretofore used. In this connection reference is made to "Eccentric's" article above referred to, in which both the questions to which this is an answer may be found. "Eccentric" has in this stated my propositions fairly, and to this statement I take no exceptions, but wish it understood that they are based on a driver (4) feet in diameter,

twenty-four (24) inches stroke, to avoid fractions in calculations.

Fig. A.

Fig. B.

Fig. C.

Fig. D.

The four illustrations, Figs. A. B. C. and D. show the different positions of a standard American locomotive driver in a single "revolution" around its center, and "rolling" forward one revolution on the rail. Said center "being an imaginary line through the axle around which the particles of matter in the driver revolve," its true axis "on" which it rests and revolves is the rail, and that the rail and locomotive are all moving at the same speed, as regards the movement of the earth; as regards the driving wheel and its movements the rail is at rest. As this seems to be one of the points under which my friend Mr. Tucker "runs to cover," I will give my understanding of his proposition in this connection.

Philadelphia, say, is one thousand miles from Chicago; say difference in time one hour. With the earth movement of each they will always be just *one thousand miles and one hour* that far apart. Place the locomotive at Philadelphia, the rail at rest as regards the driver, and then applying power to the last and combining "rotation" or "rolling" on and over the rail, and the locomotive reaches Chicago in twenty-four hours. Philadelphia and Chicago are just as far apart

when the locomotive reaches its destination. Now turn her around and run backward against the movement of the earth, and "she gets there just the same." In the one case she is going with time and in the other against it; difference of time in this case one hour in her favor, i. e., she has made up one hour in going. This is a movement *with* the earth. Reverse the movement and on the return to Philadelphia the movement is against that of the earth. For a better understanding of this let my friends read Jules Verne's "Around the World in Eighty Days." If the locomotive leaves Philadelphia one morning at 8 o'clock and arrives at Chicago the next, Chicago's time should be 7 o'clock. Let the engineer keep Philadelphia time, and when he reaches Philadelphia on the return he will arrive at 8 o'clock; if he goes by Chicago time he will arrive one hour late.

In Fig. A. the crank pin is at its upper limit, and exerting its maximum of power with a leverage of three feet from "its bite" or axis on the rail, all reciprocating and rotating parts in combination being moved by the steam acting on the area of surface of the piston-head, the piston-head and rod moving *through* the cylinder.

In Fig. D. it is at its lower limit, and exerting its minimum of power with a leverage of only one foot from "its bite" or axis on the rail, and acting as in Fig. A., with this

difference, the cylinder is moving *over* the piston-head and rod and acting on the entire area of cylinder, in the former case it was less than two inches diameter of the piston rod.

Fig. E.

In Fig. E. we have the "wave line of power," as acting in two directions, shown by the arrows, and indicating the changing direction of power, showing at its upper and lower limit the position of the crank-pin in Figs. A. and D. What I have called "shocking bad mechanics" in the world's standard of locomotive practice, is the attempt to balance this "wave line of power" by rotating weight moving in the counter-balance, cycloidal lines B¹, B², B¹. Either the steam pressure is controlling the counter-balance at the many varying speeds, along the "wave line of power," which I have heretofore described, or the counter-balance is controlling the steam; or in the case of an over-cylindere locomotive the driver slips.

Fig. F.

Fig. F¹.

In the outline illustration of the Shaw locomotive, Fig. F., (the use of a powerful glass will aid you in following the description, or a reference to April, 1889, *Magazine*, page 310, will show a larger illustration) can be seen the two cylinders, the single valve, her double cranks and crank-girder, the last to take up torsion strain. We claim for this locomotive that in a single slide-valve, duplex acting, steam counter-balanced, double-cylindere locomotive there is no "nosing around," "no wee-wahing," "no hammer blows," "no lurching," "no galloping," "no rotating and hammering metal counter-balance," all "pulls" or "pushes" in a downward direction, and none lifting or

gyrating. All backward and forward jerks removed. All motion in the direction of the line of translation. Perfect elastic steam balance in all directions and at all speeds.

Fig. G.

In Fig. G. we show the same "wave power

line" C^2 as in Fig. E., but no counter-balance line; the cycloidal line C^1 corresponds with the same line in Fig. E. With this very full explanation we come to the application of correct mechanical principles for locomotive practice. Here we introduce a "wave power line" equal distance from a common center, and moving in opposite direction to its counterpart, each controlled by an elastic steam pressure supplied by one valve, all rotating and reciprocating parts are balanced by equal parts, moving along lines C^2 C^2 at varying speeds from at 50 miles per hour along line C to 25 or 75 miles per hour on lines C^2 C^2 . It will be self-evident that if this were a stationary engine or a locomotive off the track and drivers blocked, then these lines, "wave power lines," would cross each other on line C, because it is a locomotive and possesses the power of locomotion, it, the power, must move on the wave lines indicated, and can move on no other, and this proves the main point of what I have been contending for from the time of my first article more than three years ago. It was the first child of this Mechanical Department, March, 1886, page 146.

The lower wave line having the less distance to travel, the steam expands less rapidly, while the upper wave line having the greater distance to travel the steam expands the more rapidly. The wave lines must necessarily cross each other as they do, just as much above the center line C as the difference of speed above said line C, distance and expansion of steam as shown. In this case we have only one ho-st, steam, and not two; one minute metal counter-balance and next steam, but steam vs. steam "all the while." When the lines are acted upon by steam pressure, in one movement of the piston-head and rod they are moving through the cylinder; the cylinder of the other one is simultaneously moving over piston-head and rod; these movements are alternating.

I thank Messrs. Tucker and "Eccentric" for making the inquiry, and crave your indulgence for the length of my explanation. Deeming the answer a most important one in its relation and application to the locomotive, and as further demonstrating and illustrating the correct application of a science to the arts, I re-state Messrs. Tucker and "Eccentric's" questions briefly, and again make reference to April Magazine, 1889, page 694, for the full questions.

Mr. Tucker's question: "Let us now suppose that in a locomotive of the Shaw type, the weight supported at each of the crank-pins of the forward driver is 300 pounds, and that she is running fifty (50) miles per hour. When the pins are in line above and below the center, according to your idea the upper weight is moving seventy-five (75) miles per hour, the lower

one twenty-five (25) miles per hour. Won't you please figure the momentum of these two weights, and show me how they can balance? This is one point that mystifies me. Won't Mr. Lockwood explain?"

"Eccentric's" question: "If, therefore, there is a "perfect balance," why do not these "power lines" cross each other on the central parallel lines, and not above them?" [Note by the writer. Central line is C, and wave power lines C^2 C^2 ; Fig. G. the arrows indicating on lines C^2 C^2 the changed directions of their action as they are respectively "pushing" or "pulling." Piston-head and rod, in the last case moving through the cylinder, and in the first the cylinder moving over the piston-rod and head.]

Answers.—In the case of the Shaw locomotive, every part balancing a like part moving in an opposite direction on wave power lines C^2 C^2 , from a maximum of speed at the upper limit of the upper crank-pin of seventy-five (75) miles per hour, to a minimum of twenty-five (25) miles per hour at the lower limit of the lower crank-pin. A measurement of these upper and lower wave lines will find the lower one just as much shorter as the difference of speed which it travels, averaged into a speed of twenty-five (25) up to seventy-five (75) miles per hour in one revolution of the crank pin. When both piston-heads are at the limit of their stroke, as in Figs. B. and C., forward and back centers, then all differences have been compensated for, because both piston-heads must, and do, reach the end of each cylinder at the same time.

William E. Lockwood.

LOCH ERIE, August 19, 1889.

Kindergarten Mechanics.

SQUARING THE AREA OF CYLINDERS.

MR. EDITOR:—We of the round-house were discussing the area of circle question the other noon, after the dinner pails were cleaned out and cleaned up, when Jim let drive at "Eccentric" with, "what do you mean by 'Kindergarten'?"

Eccentric.—"Why, it's Dutch for object-teaching."

Jim.—"All right then; there is my dinner-pail, it's an object, it's round, call it a circle or cylinder. Give us the square of its area, so we can see, and seeing, understand."

Eccentric.—"I will try. Take a piece of paper just the height of the inside of your dinner-pail. You see it is four and three-quarters ($4\frac{3}{4}$) inches. Fit it nicely and so the edges fit evenly, and then measure this, and we have a sheet four and three-quarters by twelve and seven-eighths inches ($4\frac{3}{4} \times 12\frac{7}{8}$) inches. Square this, and we have the area of surface around the inside of the dinner-pail. Now fold this into four accurate

squares, and we have the same area of surface in a square dinner-pail."

Jim—"All right, I will get our tinner to make me a square dinner-pail to this measure, and then if each holds the same amount of fluid, then I will believe you, otherwise I won't."

The next day the square dinner-pail was on hand, and Jim jubilant (guess he had been trying it). We filled the circle with water and then tried to get the square to hold it, but it would not; then we filled the square and the circle held it with an inch (1) less height—i. e., three and three-quarters of the circle held as much as four and three-quarters of the same surface. Well, Jim he just howled, and the way he went for me was "peculiar," because usually he is so "child like and bland." If some of the learned ones will take this illustration perhaps this difference in the measurement of fluid may help to explain "Wm. H. Perry's" inquiry, September *Magazine*, page 783, as to the fraction, " $\frac{7.854}{10000}$ "

Eccentric.

Sketching a Locomotive.

Since *Scribner* has given us so many illus-

Fig. F.

trated railway articles, there seems to have been an increased desire to sketch and photograph locomotives. Mr. George A. Errington, of Stapleton, Staten Island, N. Y., who has done so much of this class of work for Post Master General Wannamaker, desired me, two years ago, to give him suggestions for an outline sketch of the Shaw Locomotive. His first effort in this direction is shown in Fig. F herewith. Having expressed a desire to ride on a locomotive by daylight and dark, I afforded him an opportunity, and the improved result is shown in Fig. F¹. Several miles of which he traveled to get ideas of this sketch a mile a minute, never before having traveled in the cab of a locomotive. These cuts will be found in my article, "Answering Messrs. A. H. Tucker and Eccentric," current number of the *Magazine*.

William E. Lockwood.

LOCH ERIE, Sept. 8, 1889.

Blowing Out Cylinder Heads.

H. G. Prout, writing in *Scribner's* for September under the caption of "Safety in Railroad Travel," speaking of emergency stops, page 332, says:

"It some times happens that an engine runner reverses his engine, before shutting off steam, in which case the cylinder heads will very likely be blown out, and the engine be instantly disabled."

Very likely no such a thing will happen at all. On the contrary, the very mode of proper procedure as prescribed by Mr. Prout will present more chances 10 to 1 of either bursting steam chests or blowing out cylinder heads, than the exception to his rule as quoted above will.

The article in question is very interesting and instructive and remarkably free from the death dealing inaccuracies of *Magazine* articles, by men of no practical experience, which frequently make life a burden to railway men with the exception quoted (which is perhaps prompted by some back number Master Mechanic or Armstrong Brake Crank Engineer.) It is well worth perusal by everyone, and the mistake he makes about

Fig. F.¹

blowing out cylinder heads deceives no one of practical experience.

In twelve years actual experience I never heard of an authenticated case of either cylinder heads blown out or steam chests bursting when the engine was reversed while running with the throttle open. Did you?

Dirigo.

Slipping on Down Grade.

MR. EDITOR:—Why does a locomotive slip on a down grade without the use of steam? I am firing a Baldwin engine on night express and very frequently this occurs and so much so that the air has to be used to check the speed of the train before she stops slipping. Having never before heard of an engine doing this I would like to be enlightened by some of the contributors to the *Magazine*. Fraternally

Review of September Number.

The advance sheets of September Mechanical Department are at hand in good time, and contain the usual quota of valuable articles.

**3½ YEARS WORK
IN THIS
DEPARTMENT.** The first article in the department is by "Eccentric," and calls attention to the fact that this Mechanical Department seems to be the outgrowth of "a few problems" propounded by him in January *Magazine*, 1886. It is well to thus look back once in a while, to see the place where we started from and view the ground passed over. We find that during the period of a little over three years, many "knotty" problems have been solved, many disputed questions satisfactorily answered, and no doubt much information has been gained by all, because those who have tried to answer queries have been obliged to give reasons for their belief, and to examine those reasons to see if they were founded on solid facts, and those whose queries and doubts have been solved have the satisfaction of knowing how, and can also give reasons why.

The men on the "Elevated" road, without a doubt, have a better chance to obtain knowledge than any of their fellow-craftsmen, for they are within easy reach of half a dozen technical schools, where odd hours of the day or evening could be used to attend a free course of lectures, and thus secure mechanical and mathematical instruction and fit themselves to take hold of and to discuss questions arising in their calling.

If these men, with their superior means for obtaining information, have been benefited and "elevated in their intellectual standing" by means of the study of these pages, and the subjects brought up for discussion in them, (as seems to be taken for granted by "Eccentric's" interpretation of "Mr. Rauch's" words), how much more ought the department to be appreciated by those whose access to knowledge is not so handy? Hoping that "Eccentric," "Vacuum," "Eccentric Strap," "F. N. H.," "Ambly Division," "A. H. Tucker" and all the others will take courage by this testimony to the value of their labors, and continue on "this line, if it takes a l" of our life-time to finish it, or hand it over to others even better qualified to carry it on.

**SOME MORE ON
SQUARING
THE CIRCLE.** "Mr. Lockwood" tells us that he had the "expert corps" of one of the largest railways, answer the question of area of surface of the Shaw. This ought not to be so very hard a question to answer, and could be figured out by some who would hesitate to have themselves enrolled as experts. "Mr. Lockwood" is certainly right in saying that one 21-inch piston has an area as large as four pistons of 10½ inches, and this view is clearly established in my communication to this department in the June *Magazine*, pages 506 and 507.

While on this subject, let me refer "Wm. H. Peary" to my remarks on squaring the circle, on page 784 of September *Magazine*, and further suggest that "W. H. P." lay out a square of any given size, and then draw a circle within it, said circle to have a diameter equal to the side of the square. "W. H. P." will find a considerable portion of the square outside of the circle, and the square is thus proven to be larger than the circle. Mathematicians have found that the portions outside of the circle amount to $\frac{2146}{10000}$ of the whole, leaving $\frac{7854}{10000}$ in the circle. As I have pointed out, multiplying by .7854 reduces the product in the proportion that .7854 bears to 10000, and this rule holds good for all sizes of circles and squares.

"Mr. Rauch" has his say "ONWARD." on the "Onward" with her flat wheels, in contradiction to "Fireman," whose letter was copied in these pages, and as we also find "Mr. Rauch's" reply to "Fireman" reproduced from the "Engineer," we have a chance to hear both sides, but must remain neutral (as we cannot take sides from lack of knowledge on the point at issue) and await further development.

**A. H. TUCKER
ON
HAMMER BLOWS** Bro. A. H. Tucker, with the invincible courage of his convictions, which would lead him to "face a world in arms" in defense of his opinions, keeps "hammering"—no, that's a mistake, for he does not believe in "hammering" very much—well, he keeps putting his array of arguments so strongly that it will be a hard matter to successfully contradict them, but still, I fear, without avail in this case, for after he has "knocked down" all the arguments in favor of the "hammer blow," Mr. Lockwood will come up smiling and say "he was not there."

**COMPARISON
OF
SPEED.** The article on "Comparative Speed of Railway Trains" seems to show that in the matter of speed we are left a few miles behind our trans-atlantic cousins, but the time is being shortened up between principle points with every new time table issued, and without doubt we will have trains which will make fifty to sixty miles an hour as a regular run, for it has been proven that we can do it when we try. As a matter of course, much time can be saved by eliminating wayside stops from the fast trains, by making slower trains to go in advance and "pick up" the passengers, and carry them to some point at which they could take the fast train to go on to their destination. A mile in a minute does not seem to be so very fast on a good track with a large driver, and with the assistance of the steam brake, is probably safer than thirty miles per hour was when the hand-brake was the only reliance for a stop, as it was some years ago.

Vulcan.

Railroads in Siberia.

The mention of Siberia brings to the average mind, a sterile country, covered with snow and ice, inhabited by convicts banished by the rigors of an autocratic government, in many cases without the formality of a trial, but many are aware that the country is rich in minerals and in forests and in forests that even the rudest efforts at agriculture are rewarded with good harvests. The country is rich in rivers, some of them of good size, and furnishing waterways and power for manufacturing. A number of cities are found within its limits, but apparently the resources of the country are as yet almost undeveloped. It is therefore with some surprise that we read of a railroad now contemplated across Siberia by which St. Petersburg would be united with Vladivostok on the Pacific Ocean, nearly opposite our city of San Francisco and about 4,000 miles from it. This new road would dwarf some of the great railroad enterprises of our country "of magnificent distances" for it would be about 4,500 miles long. It is also proposed to build a branch to Pekin in China, and when completed, London and Pekin would be within eighteen days journey, while it now takes thirty five days from London via Canadian Pacific, and forty-eight days *via* Suez. With the coming of the railroad, which seems to be an assured fact, no doubt the slumbering country will awaken to a life such as we have witnessed in the west, when towns were built in a day.

MR. EDITOR:—Could not the *Magazine* issue as a supplement drawings of the different parts of the locomotive, such as balanced valves, eccentrics, etc.? They should be large enough to be plain, on good paper, and when pasted onto a piece of card-board would be an addition to a fireman's library of some account. One subject each month would not be very expensive. If this is not possible, where could such drawings be procured?

J. R.

FORRESTON, ILL., September 9, 1889.

[The drawings suggested by "J. R." would involve an expense which we could not afford to incur at our present rate of subscription. Some future day we may be able to add something in that line to the *Magazine*. We advise "J. R." and others who are interested in drawings and vertical views of locomotives and standard literature in that line to subscribe for the *Locomotive Engineer*, 96 Fulton street, New York City.—ED. MAGAZINE.]

The engines which were in the Johnstown flood, thirty-nine in number, have all been taken out of the mud and are standing on a side track at Johnstown. Some of them are damaged \$500, others \$1,000 and some fully \$3,000.

Foaming and Priming.

SANTA ROSA, CAL., Sept. 10, 1889.

MR. EDITOR: A great many engineers use the terms foaming and priming as synonyms. It seems to me that there should be a distinction made between the terms, as they express entirely different conditions.

Foaming is a commotion in the water caused by dirt or oil.

Priming is the lifting or carrying away of the water by the steam, and is generally due to insufficient steam room, improper construction of the boiler, or by a sudden release of steam. Priming is caused, in some cases, by over-taxing the boiler.

Foaming does not take place unless the water is impure or the boiler foul. While foaming and priming are somewhat alike they are not to be cured by the same remedy and do not produce the same results. Foaming generally causes a boiler to prime, but priming is not necessarily attended with foaming.

A. T. P.

NEW YORK, August 12, 1889.

MR. EDITOR:—In reply to the query of the Decimal 7854 I think he will find an answer in one of my articles in a back number of the *Magazine*. As I know many *Subscribers* for the *Magazine* have not read it closely, I will repeat it.

For the purpose of Mathematical calculation a square inch of surface was divided into 10,000 parts. It was found that one inch of surface in a circle of that diameter contained 7854 of those 10,000 parts. A circle of any size bears the same proportion to a square of same size that a one inch circle does to a one inch square. To multiply the diameter of a circle by itself would give the contents of a square, hence to find the proper area of the circle you must multiply the first result by Decimal .7854 which gives answer required.

E. J. Rauch.

THERE are some very fine exhibits of railway cars at the Exposition, that is of such cars as they use in Europe. These cars are particularly noticeable for the excellent manner in which they are painted. The builders evidently believe in the efficacy of lead and oil, and the workmen know how to apply it for good effect. Excellent taste is shown, however, in not attempting anything gaudy.

THERE are more miles of railroad in the Australian colonies, in proportion to population, than in any other country in the world, except the United States.

THE South Australian government has agreed to pay £10 (\$48.70) to every engine driver who runs his train two years without an accident.

Soda Locomotives.

Four locomotives to be run by soda, which takes the place of fire under the boiler, have been built at the Baldwin Locomotive Works in Philadelphia. They are for service on the streets of Minneapolis, Minn., where steam engines are forbidden. The engine is about sixteen feet long, entirely boxed in, with no visible smokestack or pipes, as there is no exhaust or refuse. The boiler is of copper, eighty-four and one-half inches in diameter and fifteen feet long, having tubes running through it as in steam boilers. Inside the boiler will be placed five tons of soda, which upon being damped by a jet of steam, produces an intense heat. In about six hours the soda is thoroughly saturated, when the action ceases. A stream of superheated steam from a stationary boiler is then forced through the soda, which drives out the moisture and the soda is ready for use again. The exhaust steam from the cylinders is used to saturate the soda, and by this means all refuse is used. These engines are the first of their kind that have been built in this country. They will have the same power as those used on the New York elevated roads. Soda engines are used in Berlin and other European cities very successfully, and they also traverse the St. Gothard Tunnel, under the Alps, where the steam engines cannot be used, because the tunnel cannot be ventilated so as to carry off the noxious gases generated by a locomotive.

THE Pennsylvania Railway Company, instead of offering a premium to the man who can run on the least coal for a month, or six months, go on the principle that when a man saves a dollar for the company he is to get half of it. Each month they post at all roundhouses on each division a list of the trains on the road and the limits of coal they are expected to run under. The trains are allowed so much coal per car per mile, some on the New York Division as high as twenty four pounds per mile, and some as low as 3.8 pounds. When a crew run under the amount allowed by the bulletin for a month, both the engineer and the fireman receive sixty cents per ton for all coal saved, and the extra money saved by some of the best men is enough to keep them in clothes. This plan is superior to the prize plan, as it gives every man a chance to profit by his care, intelligence and devotion to his business.—*Exchange*.

A FREIGHT train on the new line of the Canadian Pacific through Maine was delayed several hours recently by an army of caterpillars, which swarmed upon the track faster than a large force of men could sweep them off. Sand was used to no purpose.

Locomotives.

The Baldwin Works are building nineteen locomotives for the Wilmington & Weldon.

The Richmond & Danville have placed an order for three locomotives with the Pittsburg Locomotive Works.

The South Australian government has decided to call for proposals for 14 narrow-gauge and 6 broad-gauge locomotives.

The Brooks Locomotive Works, of Dunkirk, N. Y., has closed a contract with the Montgomery, Tuscaloosa & Memphis Railway Co. for fifteen locomotives.

The Rhode Island Locomotive Works are building twelve consolidation locomotives for the Fitchburg Railroad and two eight-wheel engines for the East & West Alabama.

The Schenectady Locomotive Works are to fill an order for twenty-five new engines for the Lake Shore railway, three of these to be heavy passenger engines, fifteen mogul freight engines and the others for switching purposes.

The average length of life of the tubes on the locomotives of the Northern Railway of France, is 234,000 kilometers (145,080 miles) for new tubes and 190,000 kilometers (117,800 miles) for those that have been repaired.

The New York Locomotive Works, Rome, N. Y., has just delivered to the New York & New England two new freight locomotives weighing 65 tons each. The road is to have five more machines of the same pattern. Negotiations are pending with the Union Pacific for the construction of a number of consolidated locomotives, to weigh 75 tons each.

The New York Central and Hudson River Railroad will this week let contracts for 56 new locomotives. The number will include 50 freight engines, with six wheels coupled, and cylinders 19 x 26, weighing 60 tons each; five passenger engines for local service on the Harlem Division, ordinary American type, 17x24 in. cylinders, weighing 42½ tons each; and one dummy engine, for hauling freight on the New York city street tracks.

The Northeastern Railway Company is now building at its Gateshead shops, five compound passenger locomotives of exceptional power and size. These engines are on the Worsell & Von Borries system, of which the Company already has a number in use. The new engines have a forward truck, one pair of drivers 7 ft 6 in. in diameter and one pair of trailing wheels. The high-pressure cylinder is 20 in. and the low-pressure 28 in. in diameter, being 21 in. stroke. They are intended to run the Company's fast express trains.

On Saturday, June 22, the Baldwin Locomotive Works received an order from Mr. Robert H. Coleman, of Cornwall, Pa., for a passenger locomotive for the Cornwall & Lebanon Railroad Company's narrow-gauge extension to the summit of Mt. Gretna. The locomotive was to be of the American type, with eight-wheeled tender, equipped with Westinghouse air brake, and all the improvements in use on standard gauge passenger locomotives of the highest class. The materials for this locomotive were ordered from the respective manufacturers the same day. The boiler plates were received at the works on Tuesday, June 25, and the complete boiler was taken into the erecting shop on the evening of June 28. The locomotive was fired under steam on Monday, July 1, with the wheels under it. The tank plates arrived on Friday, June 28. The hand rails, wheel cover, bell, number plate and many other details of the finish were nickel-plated. The boiler and smoke-box were lagged with asbestos and jacketed with planished iron. The locomotive and tender were finished on the evening of July 24, and shipped on the morning of the 3d. They reached Lebanon the same evening, and were in service on the Fourth of July.

CARS.

The Ellis Car Co., of Amesbury, Mass., last week shipped two open and one closed car to Toledo, O.

Two hundred box cars have just been ordered by the Evansville & Terre Haute.

The New York, Ontario & Western are having a new officers' car built at Wilmington, Del.

The New York, Susquehanna & Western has just contracted for the construction of 500 new freight cars.

The Missouri Car & Foundry Company, St. Louis, Mo., is building 300 fruit cars for the Louisville & Nashville Railroad.

The Ohio Falls Car works, Jeffersonville, Ind., has a contract for 200 fruit cars for the Louisville & Nashville Railroad.

The Southern Pacific is building two new parlor cars for the use of the California State Board of Trade in exhibiting products of that country throughout the East. The cars will be sent out in October, and will visit sections not touched by the exhibit which is now on the road.

The New York, Providence & Boston Co. have lately contracted for the construction of fifty express freight cars, similar to those built a year ago, for the New York, New Haven & Hartford.

The tubular steel passenger car which we have several times referred to as being under construction at Boston, has been sent to Laconia to have the inside fittings put up. The car will be finished in handsome style, with non-combustible fittings and upholstery.

The Erie Car Works are building 200 cars for the Silver Lake Railroad; also a lot of ice cars for the same road. The company is also building some tank cars for the American Chemical Co., and is working on some cars for the Calumet & Hecla mines.

The St. Louis Car Co. is working on the following orders for street cars: Twenty for the Broadway line and 10 for the Union line, in St. Louis; 15 for St. Joseph and 15 for Peoria. The company will soon make additions to the machinery in use in the blacksmith shop, and will also soon erect another building.

The Laclede Car Manufacturing Co., of St. Louis, has contracted to build the following street cars: Forty coaches and 40 grip cars for the Denver City Cable line; 20 grip cars and 10 open coaches for the Kansas City Co.; 20 closed coaches for the St. Paul Cable Railway Co.; 12 motor coaches for the Redonda Railway Co., Los Angeles, Cal.

The Newburyport Car Co. shipped to Boston last week two open cars, constructed with iron posts and frames, made of wrought and malleable iron, and designed by the Superintendent. The roofs are also of a new design, and are especially adapted to the use of electric motor cars. The company has 12 of these cars nearly completed for the East Boston & Revere Beach Road.

The Centropolis Car Company, of Centropolis, Kan., will increase its capital stock from \$120,000 to \$500,000. The company will begin building cars in about thirty days. The foundry department has been running some time, and is now working on castings for the Denver City cable cars. The company has been permanently organized by the election of S. J. Shoop as president, and J. J. Baughman as secretary and treasurer.

Five pretty summer cars were shipped this week by the Wason Manufacturing Co. at Brightwood, Mass., for the Brooklyn, Bath & West End Road. The Wason Co. will be busy during the summer on a contract from the government railroads of Chile. An order will be filled for 200 freight cars and a dozen coaches of different classes. The contract has also been taken to build three passenger cars for the Flint & Pere Marquette Road. The interior of these cars will be finished in mahogany.

Shops.

The car shops at Butler, Ind., were recently destroyed by fire.

The Alabama Midland Railroad Company will locate shops at Troy, Ala.

The Kentucky Central Railroad Company are reported as to build shops at Paris, Ky.

At Cartersville, Ga., the East & West Railroad Company will erect machine shops and a round-house.

It is reported that the Mann-Boudoir Car Company will build an addition to their machine shops at Ludlow, Ky.

The machine shops of the Georgia, Carolina & Northern Railroad Company will probably be located at Athens, Ga.

The St. Louis & San Francisco Railroad Company will build shops at Fort Smith, Ark., if the citizens will contribute \$13,000.

The Alabama Car & Foundry Company has been organized at Anniston, Ala., with a capital of \$200,000. Buildings will be erected at once.

The Baltimore & Ohio on Saturday last made a further reduction in the force at the Mount Clare works, discharging forty men from the passenger car shops.

The Continental Steel Car Wheel Company propose to erect works at Norristown, Conn. Steel wheels will be manufactured under the patents of T. W. Bean.

It is reported that the Louisville & Nashville Railroad will build shops at Middlesborough, Ky., as soon as their extension of the Cumberland branch is completed.

The building of machine shops at Paducah, Ky., by the Paducah, Hickman & Southwestern Railroad Company, is contingent upon the city voting a \$60,000 subscription to the capital stock of the company.

The property known as the Hinckley Locomotive Works, in Boston, which includes several large shops, has been purchased by the West End Street Railway Company, with the object of establishing an extensive electric plant to furnish power for running its electric cars.

The Minnesota Car Company's buildings at Duluth, Minn., are completed, and the machinery for the different departments, rolling mills, steam wheel forge foundry and erecting shops are now being put in, and in a very short space of time the works will be engaged in the manufacture of cars to the number of fifteen a day. The two large batteries of boilers are in position.

The Burton Stock Car Company has purchased a tract of six acres of land located between Forty-seventh and Forty-eighth streets, Chicago, adjacent to the tracks of the Union Stock Yards & Transit Company and the Chicago, Rock Island & Pacific and Chicago & Grand Trunk railroads, and is laying tracks upon the same, and also preparing to erect a shop 180x280 feet, for the construction and repairs of its cars.

The new car and repair shops of the Long Island Railroad at Richmond Hill are well on toward completion. The engine-room, whence the power is to come for hoisting the locomotives when they need to be overhauled, and for running the big lathes, has a brick chimney 125 feet high. The company has just begun to remove the machinery from the shops at Long Island City to the new works at Richmond Hill.

The Cheyenne Board of Trade laid the cornerstone of the extensive Union Pacific shops in course of construction at Cheyenne, Wyo., on July 10. The plant is of brick and stone and includes a big wheel foundry, and when completed in 1891 will employ 2,000 men. The occasion was made a holiday in the city. There was a large parade and the business houses and residences were profusely decorated in honor of the occasion.

Roads.

Engineers are at work on extensions of the Alabama, Georgia & Florida Railroad.

An extension of the Louisville & Nashville Railroad is said to be in contemplation, to run from Bangor to Blountville, Ala., a distance of twelve miles.

The Virginia & Erie Railroad Company has been organized with Mr. John King, President of the Erie, as its president. It will be eight miles long, and will run from Niagara Falls to Tonawanda, N. Y.

A narrow gauge railroad is to be built to run from Aspen, Colorado, to Ashcroft, a distance of twenty miles. It will be called the Aspen Mountain Railway, and it is expected that work will begin some time this month.

The articles of incorporation of the Omaha, Lincoln & Gulf Railway Company were filed in the office of the Secretary of State recently. The capital stock is \$12,000,000. The northern terminus of the proposed railroad is at Omaha, and the charter provides for a line through Douglas, Sarpy, Saunders, Cass, Lancaster, Otoe, Johnson, Gage and Jefferson, in Nebraska, and thence southwesterly to Bryerton, Texas. The length of the proposed line is 1,200 miles.

An important system of railroads is projected in Georgia, in connection with the Chattanooga, Rome & Columbus, the Columbus Southern and other roads. It is proposed to build a road from Dawson to Quincy, thus completing the connection from Chattanooga by a north and south line from Chattanooga to Quincy when the C. R. & C. is completed to Columbus. The *Atlanta Constitution* says: "It is proposed to unite these roads in one system from Chattanooga to Quincy, and there to make close traffic arrangements with the Florida Railway & Navigation Company. It is proposed to extend the Chattanooga, Rome & Columbus by way of Warm Springs to Cordelia, and on to Savannah. It is said that this will make a shorter route from Chattanooga to Savannah than any existing line. Other extensions are proposed. It is thought that arrangements will be made with the Georgia Midland for an entrance into Columbus. The intersection of that road by the Chattanooga, Rome & Columbus will be at Warm Springs. How the road will come into Atlanta is not stated. It has been the plan heretofore to build a branch of the Chattanooga, Rome & Columbus from Cedartown direct to Atlanta, and that entrance will probably be adopted."

At an after-dinner speech at Crewe, before the visiting American engineers, Mr. F. W. Webb, Locomotive and Car Superintendent of the London & Northwestern Railway, stated the following: The company has a capital of \$5,800,000; annual revenue, \$51,500,000, and annual expenditure, \$25,400,000. The number of persons employed by the company is 60,000; in locomotive department, 16,000; miles operated, 2,500; stations, 800; signal levers in use, 30,000; lamps lighted every night, 13,500; cabins, 1,400. The number of passengers carried annually is 57,000,000; weight of tickets issued, 50 tons; number of tons of goods and minerals carried, 30,000,000 annually; engine mileage per year, 55,525,334. Last month, with a mileage of 1,750,000, they had with the passenger trains only one hot crank pin, and with the goods trains two such failures, and they had only one failure of a connecting rod for both goods and passenger trains. The number of tons of water consumed was 24,000 per day; coal used, 2,740 tons per day; pounds of water evaporated per pound of coal used, 7.15. During the year, beyond the ordinary services, they had run 11,311 special passenger trains, 17,238 special goods trains, 78,285 special cattle and mineral trains; total, 166,842 trains. The company owns 33,000 freight cars, 5,600 passenger coaches, 3,200 horses, 3,100 carts, 2,500 locomotives and 20 steamships. Crewe Engine Works occupy 116 acres of ground, the covered area being 36 acres.

Bridges.

Barnum's circus, forty cars, was the first paying train to cross the great Poughkeepsie bridge.

The Lehigh Valley has obtained permission from the courts to erect a bridge near New Ringgold, Pa.

The Chicago & Eastern Illinois has contracted for an iron bridge over the Wabash river at Clinton, Ind.

A viaduct will probably be built over the railroad tracks on Bridge street, Jacksonville, Fla., by the city authorities.

The Chicago, Rock Island & Pacific is building a new iron bridge, 791 feet long, across the Cedar river, at Moscow, Iowa.

The Louisville Bridge & Iron Company has a contract for several new spans of iron bridge for the Louisville & Nashville Railroad.

Girving and Robinson, of Winnipeg, have been awarded the contract for bridging on the Morris Branch of the Northern Pacific & Manitoba.

The contract will soon be let for an iron through truss bridge over Stone river on the Lebanon branch of the Louisville & Nashville.

The Penn Bridge Company, of Pittsburgh, has the contract for building a bridge near Akron, O., for the Cleveland, Akron & Columbus road, for \$1,625.

The contract has been let for the grading of eleven miles of the Midland, Highland & Lake Butler Railroad, which is to run from Middleburg to Lake Butler, Fla., a distance of twenty miles.

The Edge Moor Iron Company has just completed a viaduct for the East Tennessee, Virginia & Georgia, on the Georgia Division, near Jackson, Tenn.

The King Iron Bridge & Manufacturing Company, of Cleveland, O., has secured the contract for eleven spans of iron bridges for the Richmond & Danville.

The Detroit Bridge Company has just finished a two-span bridge at Paint Rock, on the Memphis & Charleston road, and has also completed some seventy girders at the same place.

The Missouri, Kansas & Texas will soon let the contract for rebuilding the bridge over the Trinity river, near Fort Worth, Tex., which was destroyed by the recent flood.

The Atlanta Bridge Company, of Atlanta, Ga., has the contract for an iron bridge over the Tallapoosa, on the Anniston & Montgomery railroad. This bridge will have a draw span 250 ft. long; two fixed spans of 150 ft. each; one of 100 ft. and one of 75 ft.

The Missouri Valley Bridge & Iron Works, of Leavenworth, Kan., has been awarded the contract for building a large iron bridge over the Red river, near Texarkana, Tex., for the Texarkana Northern road. The contract price is understood to be \$120,000.

The Delaware & Hudson Canal Co. will replace eighteen wooden bridges on the line of the Adirondack Division with iron bridges, filling in with earth the depressions of 450 and 1,500 feet in length in the town of Greenfield, near Saratoga, now spanned with wooden trestles.

The Berlin Iron Bridge Company, East Berlin, Conn., has just completed twenty-three spans of iron bridge for the Hartford & Connecticut Western Railroad. The spans are of different lengths and replace old wooden bridges. The company is erecting an iron bridge, with three spans of 150 feet each, for the Somerset Railroad, at Caratunk, Falls, Me. The company also has on hand an iron bridge across the Canadian river in Texas; and iron buildings for the Wilcox & Crittenden Company, at Middletown, Conn.; for the Holmes, Booth & Hayden Company, at Waterbury, Conn., and for the Shelby Iron Works, at Shelby, Ala.

WOMAN'S DEPARTMENT

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to

MRS. IDA A. HARPER,
TERRE HAUTE, IND.

OCTOBER, 1889.

A PLEA FOR CHILDREN.

A number of letters received from different correspondents would seem to indicate a very decided disapproval of the letter from New Albany in the *August Magazine*, signed, "Coladager Ed." The mothers are especially offended, and if he had gotten into the Woman's Department with the heretical letter he would have been frightened at the buzzing about his ears. Our cynical friend is not so much to blame for his opinions as for his rashness in expressing them. Such feelings as our correspondent experienced are not uncommon to bachelors who visit their old chums after a few years of married life and find a tired wife and a house full of babies. Indeed, it is the rule and not the exception for the friend to go away devoutly thanking his lucky stars that he is still enjoying single blessedness. And yet when these same gay bachelors yield to the inevitable and enter the matrimonial ranks, they make the most indulgent of fathers and take more pride in their own "dirty-faced little children" than anything they ever possessed.

It is nevertheless a fact to be regretted, that many of our working people have families larger than their means will justify. It is inadvisable for a man to have more children than he can properly clothe, feed, educate and train into useful members of society. It is unfortunate for a woman who is not able to hire the necessary help in her household, to exhaust her strength in frequent child-bearing, and wear out her life in caring for a constantly-increasing brood of little ones. Too many are almost but not quite as much to be deplored as not any children. But a family of moderate size is the greatest blessing that ever was conferred upon men and women. There is no joy so sweet as that of motherhood; there is no pride so exalted as that which a father cherishes in his children. To expect a bachelor to understand or appreciate these feelings is to imagine the impossible.

It is the delight of ownership, it is the knowledge that these children are one's own flesh and blood which make this sentiment

so sacred. There is an exquisite charm in watching the development of character, in discovering the various traits of inheritance. The fond parent does not notice the dirt, he looks right through it and sees only the chubby cheeks and the kissable mouth, the eyes so like its mother's, and the curly pate, a fac-simile of its father's. He is glad to have his children hungry for by that sign he knows they are healthy, and he is proud of their sturdy limbs and their strong voices. And the faithful mother never grudges these precious ones an atom of her time and labor. Her only regret is that she cannot give them more. The sight of their little heads on the pillow at night, the sound of their prattle and laughter through the day, are all the reward she asks. Father and mother both realize the daily and hourly self-denial made necessary by these children. They fully understand that while in one sense of the word they are a bond uniting parents in the closest of all relations, in another sense they act as a wedge, gradually separating the husband and wife from one another and preventing that delightful interchange of confidence and affection so dear in the days of early married life. And yet they are content, finding in that most holy and lasting of all sentiments, the parent love, a recompense for every sacrifice.

Can any unmarried man understand this? It is entirely beyond his conception or appreciation. He turns from the humble cottage of his friend and goes out into the world. Not a soul cares for him except as he may be able to minister to some selfish enjoyment. He finds a few indifferent friends at the lodge or club. Pretty girls smile on him in hopes that he may confer upon them some of the favors dear to the feminine heart. No one asks whence he comes or whither he goes. He has no responsibility, neither has he any anchor to hold him to his moorings, or harbor to receive him when he tires of the restless tossing of life's waves. Bachelorhood is but one remove from the hermit in his cave, utterly useless to the world and an incubance on the face of the earth.

EUGENE V. DEBS, accompanied by his wife and some friends, has been spending a few weeks on the coast of Maine. The Woman's Department hopes he has experienced a much needed rest and has returned home with renewed strength and courage for the arduous and endless duties of his position.

MANY readers of the *Magazine* have met Mrs. C. O. Mailloux, of New York, formerly Miss Emma Debs, and have been attracted by her unaffected cordiality and genuine worth of character. These friends will extend sincere sympathy to herself and her

most worthy husband for the loss of their only child, Mortimer, nearly eight months old. He died at the beautiful suburban home of a sister, Mrs. Michel, of St. Louis, where he had been taken to escape the dangers of a summer in New York City. He was laid to rest Sunday, August 18th, at Highland Lawn, a lovely cemetery in Terre Haute. The father and mother will return home with empty arms and aching hearts but sustained by the strong affection for one another which has rendered their married life singularly happy and consecrated.

I WANT to express my thanks, and should have done so before, to Mrs. Annie B. Miller, of Grey Eagle, Minn., and Mrs. Alice Brooker, of Goderich, Ont., for their very acceptable and interesting letters. I always intend upon receiving such letters to write at once a personal reply but it seems utterly impossible to do it. In addition to the usual routine of a woman's duties I do a man's work on a daily paper six days in the week. Only those who have attempted this can understand its requirements and if I do not always show such individual courtesies as I ought, I beg my friends to consider my busy life and extend a kindly forgiveness. I wish also to acknowledge an interesting letter from Mrs. Carrie McNolty, of Stevens' Point, from which I have taken the liberty of making an extract:

You have often read or heard of the colored woman "Sojourner Truth." When a child I met her several times and her biographer, Mrs. Titus, of Battle Creek, Mich., is an old friend of my family. Sojourner was a negress of strong African type but a majestic looking woman for all that, with a voice as deep and melodious as a church organ. She wore a spotted white turban and a large kerchief, folded across her bosom, equally as white. One time she placed her hands on my head and said, "May the Lord bless you child." Now that blessing had more effect upon me than a dozen like efforts on the part of some namby-pamby male minister. I find that my letter is spinning out at a great length. That is what you catch for being a Suffragist. When I get upon that hobby I ride it so hard that I am in danger of killing it. Keep your readers stirred up, Mrs. Harper, on the subject of woman's importance. There are many who have but little time for newspapers or periodicals but who will read the *Magazine* because it happens to be at their hand. And it is also a good idea to have the husbands accidentally read some of the *Woman's Department* so that they may know how we are progressing too.

For Woman's Department.

A REVERIE.

Could I but search the deep unknown,
And fad out all its mysteries—
If, from that knowledge I might learn
That death brings only happiness,
How gladly I would yield up life,
And seek the rest I long to find—
How gladly I would leave the strife,
That earth vouchsafes to all mankind.

Oft times when evening shadows fling
Their mantle 'round me in the gathering gloom,
With silent awe I gaze upon the star-gemmed
heavens,
And ask myself what lies beyond ;
And, if among the clouds that pass before my
sight
A rift appears, it seems to me
An open door that leads to paradise—
Ah ! could we only see !

This earthly life, with all its ceaseless care,
Seems but a vague, uncertain dream,
That comes to haunt me like a memory of the
past
Wherein once shone bright golden gleams
Of sunshine; but now dark clouds obscure the
sky,
While hope and joy for me have long since fled—
A heart grown sad with grief can never happy
be—
We never can recall a day that's dead.

But why should I repine ? Why murmur o'er the
fate
That destiny hath long designed for me ?
By each and all life's lessons must be learned,
For such is God's decree ;
Then faller, not, faint heart ! nor let thy courage
fail,
E'en tho' thy way through life be marked with
tears—
Though faith and hope and trust come not again,
Let duty be thy guide through coming years.

Mrs. Nellie Bloom.

WEST OAKLAND, CALIFORNIA.

COLUMBUS, O., August 14, 1889.

To Woman's Department :

As I was looking over the *Magazine* I came across "Alice O' Darling's" request (and also the Editor's) wishing to know in what number they could find the poem entitled the "Narrow Gauge." You will find it in Vol. 13, No. 4, page 306. As I am a great lover of poems, I took the pleasure of hunting it up. I also wish to thank "Mrs. Nellie Bloom," "Mr. Geo. Hall," "Shandy Maguire," and others for their poetry, as it shows love and respect for our *Magazine*.

I remain truly yours,

Altonia, J. L.

P. S.—As I have looked back as far as 1887, I think you have made a mistake in thinking it was ever in print before.

[Please accept thanks. I remember distinctly reading the poem, "The Narrow Gauge" a long time ago, and prepared it for the *Magazine*, but although I have hunted for it as far back as 1883, when I first took charge of the *Woman's Department*, I cannot find it. "Will o' the Wisp" will confer a great favor if he will tell us where he got the poem, and straighten out the whole matter.—Ed.]

*For Woman's Department:***FORGET-ME-NOT.**

When I was young and the world seemed bright,
And flowers were my chief delight,
I planted in a favorite spot
The little flower, Forget-me-not.

The plant was given me by a friend,
Who said his friendship ne'er would end;
I watched it well with tender care,
Until it bloomed, a flower so rare.

For many months in silence sweet,
This little flower my eyes would greet,
And tell me in its simple way,
Your friend is faithful still to-day.

Its lovely fragrant, sweet perfume,
Each morn would spread from room to room,
And to my heart it did convey,
The words its blossoms could not say.

The years sped on and winters cold,
My little flower it did unfold;
Their icy cold seemed not to chill,
When Spring time came it blossomed still.

I left my plant to other's care,
My fate its blossom could share;
I left it with the faithful friend,
Who said his friendship ne'er would end.

To-day, across the deep blue sea,
A dainty missive came to me,
It said; Tho' your dear friend is gone,
Forget-me-not, it still blooms on.

It brings sweet memories of the past;
Altho' my hair is turning fast—
It seems to me but yesterday
Since we together here did stray.

And when our work on earth is done,
And we to brighter realms are gone,
Some stranger eye shall view the spot,
Where blooms our dear Forget-me-not.

The secret they can never know,
Why there this little plant does grow;
The simple tale it ne'er will tell,
It guards a life time story well.

And when in other lands you see,
The little flower so dear to me,
Keep in your heart one tender spot,
For this dear plant, Forget-me-not.

Mrs. Henry B. Jones.

WASHINGTON, IND.

KANSAS CITY, August 9, 1889.

To Woman's Department:

I will attempt to write a few lines for the *Magazine* in honor of Lodge No. 330. I find nothing more appropriate for a beginner than "Home." What a hallowed name, how full of enchantment, and how dear to the heart. Home is the magic circle, within which the weary spirit finds refuge; it is the sacred asylum to which the care-worn heart retreats to find rest from the trials of life. What tender associations are linked with home; nothing but death can break its spell.

Every young woman should early form in her own mind an ideal of a true home. It should not be the ideal of a palace but the character of home. Many a gilded palace and scene of luxury is not home. If love and happiness do not reign there it is not home. Home and home-influence are either a blessing or a curse. Commencing with our birth, going with us through

life, clinging to us in death, and reaching into the eternal world, the grand idea is a quiet spot where loving hearts dwell together. A kind word and pleasant voice and smile are gifts easy to give; be liberal, they are worth more than gold to make a happy home.

No spot is so attractive to the weary one as home. So make it a happy one.

A word for the boys, and I will finish for this time. May you ever prosper in the pathway of duty and right, and should the storm of adversity whistle 'round you, whistle as bravely yourself. Perhaps the two whistles will make melody.

A Fireman's Sister.

EDUCATION.

The late General Conference of the United Brethren Church at York, Pa., resolved that women may be licensed to preach by their quarterly or annual Conferences.

The Primrose League, enrolling over 80,000 ladies, and the more recently organized Woman's Liberal Federation, now numbering 31,000, were both in session in London the third week in May.

Sir William Gull comes to the defense of higher education for women with the statement that a university education, such as girls get at Newnham and Girton, makes them and their children healthier, and that the percentage of childless marriages is less with educated women.

Mr. A. J. Drexel, of Philadelphia, has put his project for an Industrial School for Girls into practical shape, by purchasing for it the Louella mansion, at Wayne, Delaware county, securing a charter, and appointing a board of trustees. The entire value of buildings and endowment will reach \$1,500,000.

The Brooklyn School Board has decided upon the dismissal of an experienced female teacher because if they retain her she must be placed in charge of a school building, and they do not consider a woman competent to take entire charge of a school. The Brooklyn School Board should come West and grow up.

The first woman preacher to be licensed by the Methodist Church South is a Mrs. Weber, of Springtown, Ark., whose husband is also a preacher. The innovation has caused quite a stir in Southern Methodist circles, and will probably result in the passage of a law making women eligible for holy orders.

Mr. Moody has a new departure this year, of which all friends of the right side of the woman question will be glad. He has sent out his invitation not only to young men who are college students to come and study the Bible with him at Northfield, but also to young women students on equal terms, wherein he shows himself to be a man with the light of the future on his face. He says that if he had the money to increase the accommodations of his school for girls at Northfield as he would like to do, there are 100 young women applicants whom he could welcome there.

INDUSTRIES.

Miss Sadie Lewis was elected City Treasurer at Hutchinson, at the late election.

Miss Emma Cous, a well-known philanthropist, has been elected as one of the nineteen London aldermen.

Louisiana has five newspapers controlled and owned wholly or in part by women. The most prominent is Mrs. E. Nicholson, the sole "boss" of the New Orleans *Picayune*.

Captain Mary Miller is spoken of as being one of the best Mississippi captains on the river, and that no profane language is ever heard from her men on deck or in the pilot house.

Mrs. Ella F. Brown, of New York city, holds the office of Commissioner of Deeds for thirty-four States and Territories, and was recently appointed for that position for the State of Delaware by Governor Biggs.

Miss Susanna M. Dunklee, of Newton, Mass., the first woman to be bank treasurer in the United States, with the help of a clerk, now handles about \$500,000 in money each year. In the fifteen years of her experience she has but twice taken in a counterfeit bill—in each case a \$10 one.

There are lots of smart women in Maine, but Ashland, Aroostook county, claims the smartest of the lot. This woman is carrying on a large lumbering operation, besides managing a family of children and a refractory husband. She recently made a trip of forty miles into the woods to her lumber camps, settled with her crew, inspected log landings and newly constructed dam, made arrangements for driving out her logs, and then returned in time to take up the thread of family affairs before it got tangled. She enjoys the distinction of having penetrated deeper into the Aroostook wilderness than any other white woman.

The most successful wage earner Mrs. Haines came across, is a young woman who gets \$1,600 a year for portraits in crayon and pastel. One Maine woman runs a hotel, and it ranks with the best in the State, too; one publishes a daily newspaper; three are ordained (Universalist) ministers; ten or twelve are practicing medicine; one is running an orchard and sending the fruit to market; one has established a successful business, giving employment to a number of her young friends, in the manufacture of a special sort of jewelry; the dressmakers are legion; the school teachers, music teachers, drawing teachers and canvassers are counted by the hundred; there are fifty-five professional nurses in Portland alone; many young women get jobs as hotel waitresses in summer, and make fancy work for the dealers in winter; while "quite an army" are engaged, either in shops or in their own homes, in making up men's and boy's woolen clothing. A Penobscot manufacturer estimates the amount yearly paid in wages to this last-named class of working women at half a million dollars.

SUFFRAGE.

Bishop Merrill, of the M. E. Church, advocates the freedom of the pulpit to women the same as to men.

The proportion of good women to bad ones is so overwhelming, the proportion of native to foreign-born women is so much larger than of native to foreign-born men, that American laws and customs can be best maintained, as I earnestly believe, by making womanhood a direct factor in the problem of government in this land, where the side always wins that has most votes.—*Frances E. Willard*.

The Portland *Oregonian* of May 18th, in its leading editorial, having stated that Miss Anthony had at the recent New York convention declared that she hauled down the flag of woman suffrage because of the indifference of women, Mrs. Frances Barlow, of Tacoma, telegraphed Miss Anthony for the facts, and received the following reply: "Report false. Anthony stronger, and bids Washington restore woman suffrage."

The New York *Home Journal* says: "The advocates for woman's suffrage are advancing their lines of attack on both sides of the Atlantic, and they are putting so much *elan* into their movements, and are gaining from year to year so many minor successes here and there along the line, that there can be no doubt that before the new century is ushered in they will carry the enemy's entrenchments and plant upon them the standard of the higher civilization, on which shall be inscribed, 'Justice to All—Peace and Good-will.'"

I have often spoken for the Home Rule cause in Catholic churches, with priests by my side. In this country the men have thrown off this intolerable burden of disfranchisement; but the weaker sex still have it to bear. In the garrets, holes and nooks of New York are hidden many thousand poor girls and women, trying to keep purity in their hearts, clothes on their bodies and food in their mouths, on less than two dollars a week! and thousands every year are starved and frozen into lives of shame. But what do the government and the politicians care for them? They don't vote! Let them begin voting, and how quick the government and the politicians will be to help them!—*Hamilton Wilcox*.

A recent number of the *Baptist*, published at Memphis, Tennessee, contains an able and comprehensive argument by Judge Haral, of Mississippi, in defense of woman suffrage. The Judge boasts that Mississippi was the first State or country in the world to grant to women their right to hold property independent of their husbands. The Judge says: "Where is the man of high morality and intelligence who will deny that married and unmarried women have as much right, political, and natural, and Biblical, to hold property in their own individual right, as men have? And does not ordinary intelligence know that such a right carries along with it the right to participate in legislation?"

MISCELLANEOUS:

The New York *Sun* estimates that there are in that city forty thousand working women receiving wages so low that they must embrace vice, apply for charity or starve.

We can face poverty, sickness, misfortune, great sorrow for those we love, and even for those we have ceased to love, but can yet respect—but to cling to a spouse whose character has become "worse," has deteriorated, become coarse, deceitful, lying; unfaithful unto a vow. Is degrading to the one who makes it—harmful to society, and the sooner it is abolished the better for us all.

Dr. S. G. Howe, reporting on idiocy, says: "Out of 350 idiots, 99 were the children of confirmed drunkards. But this does not tell the whole story by any means, since by "drunkard" is meant a person known as a habitual and incurable sot. By careful inquiry as to the number of idiots whose parents were known to be temperate persons, *not one-quarter* can be so considered."

A New Hampshire woman has a husband who is addicted to secret societies. One of her exasperated outbursts is thus reported: "Jine! He'd jine anything. There can't nothing come along that's dark and sly and hidden but he'll jine it. If anybody should get up a society to burn his house down, he'd jine it as soon as he could get in, and if he had to pay to get in, he'd go all the suddenner."

A little girl in Albany, whose family was about to move to New Jersey, and who had heard Jersey spoken of as a God-forsaken place, was saying her prayers at her mother's knee the night before their intended departure. She said all that had ever been taught her, and then, with peculiar emphasis and solemnity, added, "And now, good-bye, God, for to-morrow we go to New Jersey."—*N. Y. Sun*.

Save your rose leaves from your Pot-Ponni jar. Dry them thoroughly, pick out the decayed leaves; lay them in a jar with a little salt sprinkled over. Spices should be added, cinnamon, cassia, cloves, allspice, nutmeg, lavender leaves, musk, lemon rind cut *very fine*, orris root, sachet powder. Some add orange blossoms, clove pluks, syringas. If the pot-pouni is too moist, add spices, etc. to take up the dampness: If too dry, add salt but let all be fine as possible and thoroughly mixed.

Gen. Lafayette, during his second visit to America, shook hands with 8,000 men in one day, says the legend, and he used but seven words in all. He asked each one: "Are you married?" If the answer was yes, he exclaimed, "Happy man!" If no, "Lucky dog!" After a long levee, a friend asked the General how he could reconcile his congratulations to wedded and single men alike. The Frenchman laughed and answered, "Why, my dear boy, can you not perceive the vast difference between a happy man and a lucky dog?"

TEMPERANCE.

Habitual drunkenness is a cause for divorce in all States and Territories except ten.

No man has a right to plead for bread with the smell of liquor on his breath.—*Chicago News*.

An observant traveler declares that French wine drinkers look exactly like the brandy and rum drinkers of America.

Of the seventy-five criminals in the prison at Stocktown, Cal., all but one acknowledged strong drink as the cause of their stuning.

In a time of profound peace, we are sacrificing every eighteen months through the liquor traffic the cost of the Civil War \$2,800,000,000, and for what? To reduce freemen to a worse slavery than that from which the negro was delivered.—*The Issue*.

Dr. Norman Kerr, a well known scientific man and a most careful statistician, declares that the loss of life by the drink plague in England for a year is at least 120,000 lives, being as many every year as were lost altogether through the 'great plague' of 1666.

The New York *Star* in a recent issue gave an appalling account of women's drinking places in New York city. How many Christian women would be utterly shocked to read of the 'ladies' bar' at Maillard's, of six tables full of women ordering drinks, 'absinthe cocktail,' a 'pony of brandy,' 'champagne and sherry;' or to hear of the women's bric-a-brac store, where young girls and matrons indulge in all sorts of liquor from beer and milk punch to whisky and brandy.

For Woman's Department:

THE LOST SHIP.

'Twas a mournful sound through tempest wild,
That called for human aid,
It came far o'er the lonely main—
Across the surging wave;
For those who listened with bated breath,
To the storm that raged o'er the sea,
Well knew the sound heard from afar,
Was a signal gun at sea.

Its solemn tones came o'er the deep
Loudly, but in vain—
Across the ocean's billowy surge,
Where swept the fearful gale.
It told a tale of dire distress—
The fate of ship and crew,
That nobly battled with the waves,
Though powerless to subdue.

Again that signal of distress,
Was echoed far and wide,
Again it calls for succor from
That fated vessel's side;
But echo only answered back,
Across the trackless waves,
While anguish filled those manly hearts,
So hardy, true and brave.

When daylight broke o'er sea and shore,
Calm was the ocean blue,
The fury of the storm was o'er,
But where was ship and crew?
The wreckage that was borne to land,
Told a tale of sorrow grim,
As silently on wave-washed strand,
The tide came rolling in.

—Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

MATRIMONIAL DONT'S.

Don't marry the old folks, nor let them marry you.

Don't marry much above or below your social sphere.

Don't marry one in whom you have not perfect confidence.

Don't forget that mutual forbearance is the touch-stone of domestic happiness.

Don't marry unless you love, and not unless guided by reason and judgment.

Don't be any more devoted and attentive before marriage than you intend to after marriage.

Don't trifle with your affections or those of others by courting where you do not intend to marry.

Don't marry a coquette or a flatterer. The former has no heart, and the latter but a hollow and deceptive one.

Don't try to win love by flattery unless you are willing to continue flattering all through your married life to preserve love.

Don't expect that love will come after marriage where it does not exist before marriage, for all experience proves that it will not.

Don't try to win affection by making frequent and costly presents. A love which must be won in that way is mercenary, selfish and short-lived.

Don't marry for fear it will be your last opportunity to escape being an old maid or an old bachelor. As well grasp a straw to save yourself from drowning.

Don't marry for beauty alone, for it may perish in a single night, and unless accompanied by loveliness of spirit, it is only a mantle of vanity, selfishness and ill-temper.

ENGLISH WOMEN IN POLITICS.

Gladden in Congregationalist.

The English women are going into politics. As a rage, it bids fair to distance ceramics and "slumming." The Primrose League is the pioneer in this field. It is an organization of ladies, mostly high born, for work in the interest of the Conservative party. The Primrose was the favorite flower of Lord Beaconsfield, and there is, just now, a zealous cult of Beaconsfield. In the picture gallery of the Crystal Palace hangs a large picture representing the first meeting of this League, with portraits of these noble ladies picturesquely grouped in somebody's drawing-room. The central figure, queerly enough, is Lady Randolph Churchill—not long ago an American girl, and now a leader of those who seek to strengthen the defenses of the aristocracy of England. These ladies are using their social prestige and power enthusiastically and energetically in aid of the Conservatives. By the other party they are accused of turning the League into a vast boycotting machine, for the punishment of traders and professional people who do not follow their leaders. How much truth this contains I do not know.

To counteract this influence, a Woman's Liberal Association has been formed, with branches in different parts of the kingdom. The object of this Association to hold meetings among the women, especially those of the working classes, for their instruction upon the political issues of the day, that they may teach their husbands at home how to vote. A large amount of quiet work is thus carried on by the women, with considerable effect, no doubt, upon the political opinions of the voters.

WOMAN REAL ESTATE AGENTS.

Philadelphia Times.

There is a new department in which the work of women is beginning to be noticed. Boston has two women real estate agents and now New York has one, and she is a very business-like and successful individual. Miss A. K. Murphy is her name, and every day in the week one may find her driving through the wards above the Harlem, making buggy inspection of promising lots and interesting real estate parcels. Business men know her as one of the most active dealers in the upper wards, one who is seldom deceived in a purchase, and who knows every inch of the ground. It is not many weeks since she made the sale of a large lot to Kountze for \$108,000. She is clever, self-reliant, straightforward and sensible, and very entertaining.

NIGHT WORKERS AMONG WOMEN.

In a recent number of the *La Citoyenne* of Paris, France, appeared a forcible article by Mlle. Maria Martid upon the Bill pending the French Chamber for abolishing night work for women. She claimed that the Bill was prompted by those who were jealous of women's work, and that it would be an obstacle in the way of the already difficult work of women. She showed that the children of the night-working women were better cared for than those of mothers who worked out all day, as in the former case, they always had one parent with them. She said to the Deputies, "When you are elected by women you will be better able to judge of their true needs. Until then pray leave them in peace to gain their bread as they can."

OF COURSE THEY WILL HAVE A BUILDING.

Philadelphia Inquirer.

There is a disposition to gibe at Susan B. Anthony because she wants a building set apart for women's work at the world's fair; but the only thing remarkable about her appeal is the fact that she thought it necessary to make one. Of course, there must be a building specially for women. It may or may not be called an "Isabella Hall," as Miss Anthony suggests, but whatever its name, the exhibition will not be complete without it. Every great enterprise like this must have a woman's department—until the time comes when woman will have all the rights she claims, and then she will refuse such a distinction as an insult to her sex.

Correspondence must in all cases be brief and to the point.

Subscriptions must begin with the January, April, July or October number and expire with the year.

Changes of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

OCTOBER, 1889.

GREAT BRITAIN will expend \$3,000,000 in building railroads in Ireland.

It has been ordered that the employes of the Toledo, St. Louis & Kansas City railroad be examined for color-blindness.

THE Vandalia will build at St. Joe, Mich., a hotel to cost \$250,000. St. Joe is to be the terminus of the extension from South Bend, Ind.

THE Pennsylvania, which will build 3,000 freight cars this year, has decided to contract with outside companies for the larger portion of the number.

MR. JAY GOULD is said to still hold \$50,000 of his original Wabash stock, and as the road is doing a good business just now, Mr. Gould is bulling his stock, for the purpose of getting even, including interest and assessments.

It is barely possible that the Atchison, Topeka & Santa Fe railroad was built too soon, or that its stock has been watered too much, or that it has been badly managed. Reports show that of late its earnings have decreased.

THE record shows that American railways kill but one out of 10,000,000 passengers carried. Unfortunately they sometimes do killing for 1,000,000,000 passengers in one accident, which makes the casualties seem greater in number and more shocking. Such statistics are of little value to the man or woman who is required to take an underground sleeper.

THE Interstate Commerce Commission is requested to put a stop to cheap railroad rates. But the Commission replies that the interstate law deals only with exorbitant rates, not with low rates. The public does not kick at low rates.

MR. HENRY VILLARD has bonded the Northern Pacific for \$160,000,000. This money is to be used for the refunding of the present bonded debt at a low rate of interest, and also to wipe out the floating debt, and to re-equip the road.

A PORTLAND, ME., company has been chartered, with a capital of \$1,000,000, known as the Harris Palatial Car Co., and is authorized to build cars under the patent granted Louis J. Harris and Arthur W. Crossley, of Boston; Mr. Harris being the inventor.

ALL the locomotive works of the country are up to their eyes in work. The Baldwin shops have 3,500 men at work, and a large percent. of the engines now being constructed are of the largest type. Such facts indicate that railroads are paying enterprises.

A LOCOMOTIVE engineer, by the name of John Donaldson, has been elected Sheriff of Cass county, Ind. It is said that Mr. Donaldson has been a locomotive engineer for thirty nine years. He ran the engine which hauled the second train over the New Albany & Salem, now the L., N. A. & C. road.

THE millionaires who owned the beautiful lake up in the mountains near Conemaugh, Johnstown and other towns and villages in the Conemaugh valley, have been sued for \$50,000 damages for loss of life and property by the widow and children of John A. Little, of Snickley, a drummer, who lost his life in the Hurlbut House, May 31st. It is to be hoped she will obtain judgment for the full amount. The South Fork Fishing Club, who owned the lake, are rich.

THE *National Economist* remarks that "the coal miners in Indiana are starving, and those in Pennsylvania can exist only by the most rigid economy and confining themselves to the most scant supply of the coarsest food. Andrew Carnegie a few days ago gave a dinner to representatives of the English aristocracy. The meal was served in Louis XVI style, with a wealth of flowers, ferns and other decorations. Carnegie and the miners are supported from the same source, and this is said to be a land of equality. As some grow lean, probably the equality comes in the way of a general average." This man Carnegie, if treated according to his merits, would wear an iron mask.

THE New York Central has contracted for fifty-six new engines—fifty heavy freight machines and six monster passenger haulers.

THE steel rail business is reported improving, and prospects brightening all along the line. Such reports don't mean bankruptcy.

JAY GOULD is sanguine that the business prospects of the country are excellent, and that the leading railroads of the country will make bushels of money.

THE Southern Pacific Railroad will build 340 miles of extensions in California. Work is to begin at once, and an order for 30,000 tons of steel rails has been placed.

ON the 1st of September the Burlington & Missouri road was consolidated with the Denver, Utah & Pacific, with Mr. L. M. Fouts as General Superintendent.

THOSE who are in a position to know, say there is a boom in Indiana railroads. There has been of late a steady increase of tonnage and an increase in passengers.

IT is reported that the Brotherhood of Railway Brakemen has 316 Lodges and over 15,000 members, and that there are more than 5,000 Conductors in the Order.

A GENTLEMAN familiar with the business of the Atchison, Topeka & Santa Fe road predicts the heaviest business ever known to the road during the fall and winter season. It is to be hoped that he is not a false prophet.

IT is stated that the Western States Passenger Agents' Association, which met recently in Chicago, wrestled with the scalper question for a week, and then gave up the struggle by referring the whole matter to the managers. The Scalper seems to have come to stay.

AN item went the rounds of the press that a London syndicate had offered to loan the Chicago & Alton road \$40,000,000 for the purpose of building extensions. General Manager Chappell, being interviewed upon the subject, remarked: "There is a grain of truth in the report. The Seligmans, of London, through a representative, have offered to lend us \$40,000,000; but we do not need \$40,000,000, or any other sum, so their offer was declined. All reports in regard to the sale of the Alton and stories of like character are without foundation."

THE Cairo & Vincennes Railroad is a Vanderbilt enterprise.

A NEW line of railroad is to be built between Fort Wayne, Ind., and Chicago, 134 miles. The stock is \$1,500,000.

MR. VANDERBILT is credited with saying, "The public be damned." Maybe Mr. Vanderbilt now thinks he was the public.

WASHINGTON said, "Eternal vigilance is the price of liberty." This being true, working men should keep wide awake.

IT is stated that 129 roads of the United States, for the month of July, 1888, showed an increase of earnings over July, 1887, of 8½ per cent.

PLINY said, "Great estates ruined Rome." One of these days great estates in the United States will sink their owners as the worm sinks navies.

THE probabilities are that Mr. Strong will retire from the Presidency of the Atchison, Topeka & Santa Fe road. Mr. Strong is not strong enough to stand the wear and tear.

THE impression that railroads make large gains for carrying extra baggage, is erroneous, except in cases of commercial travelers. These gentlemen put in about 90 per cent of all the extra baggage found on trains.

THERE is always danger of fire in freight cars when standing in yards, and the Vandalia, to guard against such accidents, is equipping some of its yard engines with hose to be used in such emergencies. A good idea.

ABRAHAM LINCOLN saw, or thought he saw, the shadow of coming events when he said: "But I see in the near future a crisis approaching that unnerves me and causes me to tremble for the safety of my country. As a result of the war corporations have been enthroned and an era of corruption in high places will follow, and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people until all wealth is aggregated in a few hands and the Republic destroyed." A crisis is approaching, but it is not to be permitted to destroy the Republic. When the crisis comes there will be heard again and throughout the whole country

"We are coming, Father Abraham,
Five hundred thousand strong,
Shouting the battle cry of freedom."

JOHN LIVINGSTON.

Wells, Fargo & Co.—The case of John Livingston against the New York, Lake Erie & Western and this company, in which the complainant alleges excessive rates and free carriage of express packages amounting to unjust discrimination, is answered by the express company by the statement that its business is not subject to the Interstate Commerce Law, and that if any free carriage of packages has been had, it was secretly and covertly done by its employés or those of the railroad company. That the complainant had applied to it for certain privileges without charge and been refused, and this case is brought in a spirit of retaliation, and in order to wrongfully extort or gain money or property from the company.

We clip the foregoing item from the *Traveler's Official Guide* for September. It sizes up John Livingston with an exactness which would enable an artist to take his picture for the adornment of a dog kennel or a wolf's den. The Interstate Commission, should it ever go a gunning for a human musquito, or gnat, skunk or scallawag, need only to locate John Livingston, and blaze away. Messrs. Wells, Fargo & Co. have placed John Livingston in the pillory and it is in order to spit upon him.

IRRIGATING ARID LANDS.

The San Francisco *Chronicle*, in a recent issue devotes large space to the subject of irrigation. The figures used to demonstrate the importance of irrigation are startling and convincing. It says that from the one hundredth meridian westward to the Pacific ocean, a distance of over 1,400 miles, and from the British Columbia line to the Mexican boundary, a distance of at least 1,000 miles, there is a vast area in which less than 4,000,000 people are now living, but wherein at least 50,000,000 more might find prosperous homes. The declaration is also made, that for "all practical purposes one third of Kansas, Nebraska and Texas, one-half of the twin Dakotas, the whole of Colorado, Wyoming, New Mexico, Utah, Arizona, Nevada, Montana and Idaho, with seven-tenths of California and about one third each of Oregon and Washington are without rainfall sufficient for one-half the ordinary necessities of agriculture." The *Chronicle* further states that the entire area wherein the annual rainfall is not half equal to the needs of agriculture is at least 1,400,000 square miles, or 896,000,000 acres. Indiana covers 33,809 square miles or 21,637,760 acres. Ten times that area would be 216,377,600 acres. The reclaimable area of the arid region is variously estimated at from 173,099,880 acres to the larger amount mentioned in the foregoing. Upon the larger basis there would be 2,163,776 100-acre homesteads in the reclaimable portion of the arid region, and in the smaller estimate there would be 1,730,999 100-acre homesteads. Allowing five persons to each family or homestead, and there would be under

the larger estimate a farm population of 10,818,880, and under the smaller 8,654,955." It is held by those whose opinions are entitled to consideration, that twenty acres of land supplied with water for irrigation equal in production, 100 acres which are not irrigated, and it is shown upon that basis that 216,377,000 arable acres would give 5,409,440 homesteads with a farm population—of five to each family—of 27,017,200. An estimate made upon the lower basis of 173,099,880 reclaimable acres would give 4,327,497 40-acre homesteads, upon which there would be a farm population of 21,637,485, or a total, including town dwellers and workers, of 54,093,712. Thus an area which at present with difficulty supports 10,000,000 souls can be made to support from 55,000,000 to 67,000,000. The *Chronicle*, "in order to convey at a glance the importance which irrigation bears to the existence of the human race," introduces the following tables showing the area of irrigating countries and their population, are worthy of study:

Country.	Population.	Est. Irriga'n Area—Acres
India	200,000,000	30,000,000
China	382,000,000	60,000,000
Japan	33,000,000	11,000,000
Indo-China	18,000,000	8,000,000
Afghanistan, etc.	7,000,000	1,000,000
Persia	10,000,000	2,500,000
Arabia	11,000,000	3,000,000
Russian Central Asia	6,000,000	500,000
Independent		
Turcomania	500,000	100,000
Turkey in Asia	17,000,000	3,500,000
Totals	684,500,000	119,600,000
IN AFRICA.		
Egypt	7,000,000	6,300,000
Tripoli	1,000,000	50,000
Algeria	3,400,000	200,000
Tunis	1,500,000	75,000
Morocco	3,000,000	200,000
British South Africa	2,000,000	100,000
Orange Free State	1,500,000	25,000
Totals	19,400,000	6,950,000
Grand Totals	703,900,000	126,550,000

The *Chronicle* states that "in Europe irrigation is practiced in Italy, France, Spain, England, Turkey, Portugal and Greece. Altogether some 9,000,000 acres are under irrigation. In Mexico and South America 2,500,000 acres are irrigated and in Australia 200,000. Outside of the United States therefore there are 138,250,000 acres cultivated by irrigation, and there is a population of between 700,000,000 and 800,000,000 resident in irrigating countries." Such figures fully demonstrate the importance of the question which the *Chronicle* so exhaustively discusses, and on which the General Government could most prudently expend money, provided the land reclaimed does not fall into the hands of syndicate sharks. If that were to be the result, it were quite as well that the land should remain arid until Gabriel blows his horn.

LABOR DEMONSTRATION AT KEOKUK.

It affords the *Magazine* special satisfaction to chronicle the pleasant incidents attending the great labor demonstration which occurred in the beautiful city of Keokuk, Iowa, on Sunday, September 8th. Notwithstanding pressing engagements, we were permitted to be present and witness the proceedings, and was more than repaid for the wear and tear of the pilgrimage. There were three meetings during the day. The first took place at 10 A. M., and was attended by Firemen, Switchmen, Brakemen, Engineers, Knights of Labor, and members of other labor organizations, who could be vouched for, and was in all regards important and interesting. This meeting was held in the B. of L. E. hall, and when called to order, Bro. P. O'Brien, of Division No. 56, B of L. E., was called to the chair, and thereupon delivered a highly interesting address, which put the audience in good humor and prepared the way for further proceedings.

Grand Master F. P. Sargent, of the B. of L. E., was present, and being called upon for a speech, was received with generous applause, and delivered an excellent address, and was followed by a few impromptu remarks by the Editor of the *Magazine*, and the infliction was borne with the good nature so characteristic of the boys.

At 2:30 P. M., Gate City Lodge, No. 93, one of the sturdy Lodges of the Order, held a secret meeting, which was largely attended and in an eminent degree harmonious.

At 8 o'clock P. M. a grand open meeting was held in the Opera House of Keokuk, a spacious and elegant building, under the auspices of Gate City Lodge, No. 93, a guarantee that nothing was omitted to give consequence and eclat to the occasion. The *Constitution-Democrat* of the 9th gave a two-column report of the meeting, which we transfer to the columns of the *Magazine*:

The Opera House was comfortably filled last night with an audience in which quite a number of ladies were noticeable. They had come out to hear Frank P. Sargent, Grand Master, and Eugene V. Debs, Grand Secretary and Treasurer, of the Brotherhood of Locomotive Firemen, speak concerning the Order with which they are prominently connected, and to listen to addresses by gentlemen of local reputation. On the stage were seated representatives of the Engineers' and Firemen's Brotherhoods and the orators of the evening.

While the audience was assembling several selections were played by the Opera House orchestra. Shortly after 8 o'clock, O. A. Elliott, of Pella, advanced to the front of the stage, and securing the attention of the audience, stated that the meeting had been called for the purpose of discussing the questions of labor and labor organizations, and the benefits resulting therefrom. He then named Hon. John Irwin as the chairman of the meeting.

Mr. Irwin made a brief address, in which he paid an eloquent tribute to labor. The iron arm and steel hand of labor, said he, are of royal descent. He would rather be called upon to preside over such a meeting as the one he addressed than over a meeting of potentates. He would be

prouder in doffing his hat to labor than in lifting it to kings, potentates and rulers. He believed in labor and in labor organizations, and in the right of labor to form a trust to protect it from the encroachments of capitalistic trusts. Labor was entitled to respect. He believed in its super dignity and in its rights to constitute what shall be a day's work. The laboring men of this land are the ones who made and saved this country, and they should have the good will and Godspeed of all who love their fellow men. On behalf of the organization under whose auspices the meeting was held, Mr. Irwin welcomed the Grand Officers to the city.

Grand Master Sargent was then introduced to the audience, and for an hour dwelt upon the aims and objects of the organization, of which he is the official head. He is an easy talker, of excellent delivery and made a splendid impression. He told of the manner in which the order was founded, spoke of the evolution of the firemen and dwelt at length upon the good the Order had accomplished. In Keokuk, said he, is one of the most flourishing lodges in the Brotherhood, composed of men of whom all good citizens should be proud. It was their aim to make trustworthy servants to carry on the commerce of the world. They also looked after the interests of members and their families. Nearly \$2,000,000 in benefits have been paid out since the organization in 1872. They demanded a fair day's pay for a fair day's work. The speaker made a strong plea for organized labor. He spoke of the good accomplished by the Brotherhood in improving the morals of members and in making good citizens, and said that it was conceded by railroad officials that the work of the Brotherhood was beneficial. Mr. Sargent closed by paying a high tribute to the faithfulness, trustworthiness and efficiency of railroad employees.

Hon. D. F. Miller, Jr., was the next speaker, and spoke of the Order as it appeared to an outsider. In his opinion the blessing of God and the good will of man will, as surely as night follows day, rest upon any society or organization having for its motto such principles as protection, sobriety, charity and industry. Mr. Miller took these four words, the motto of the B. of L. E., as his subject and entertained the audience with an interesting and instructive address. The good work of the Order was dwelt upon, especial stress being laid upon its beneficary features. The welfare and interest of the employee, said he, is that of the employer, and he thought the day was not far distant when employers would realize and recognize this. In speaking of the sobriety of the members of the Brotherhood, Mr. Miller said that while he had no objection to any man taking a little wine for the stomach's sake, he did not want to ride on a train, the engine pulling which was in charge of men with more steam in their stomachs than was in the boiler. He spoke of the improvement to be noticed in members of the Brotherhood and other labor organizations, and closed with the declaration that, in his opinion, labor had the right to unite for protection.

Hon. J. C. Davis, upon being presented to the audience, spoke of the labor problem as the great question of the present time, and thought it would be settled by public discussion and fair and impartial hearing. Being a progressive people we would meet questions of the present and future in a more intelligent manner than in the past. He spoke of the history of railroads in this country, and said it was an interesting one. At present it is the case of a good man gone wrong. The stronger corporations have swallowed the weaker ones, and managers of great combinations appeared to forget that their power comes from the people. If too greatly imposed upon the people are likely to become angry, rise in their might and go too far. He hoped the day would come when railroad patrons and employees would be recognized and respected by the magnates. The speaker said he had great respect for labor, as much, however, for those who work with their heads as for those who labor with

their hands. He spoke eloquently of the Brotherhood; its aims and objects. In concluding he said he hoped to see the day when labor and capital would meet on the same plane in fact as well as in theory, and that the motto, "live and let live," will be something more than a meaningless phrase.

Grand Secretary and Treasurer Debs was the next and last speaker of the evening. He said that it was unfortunate that some people looked upon the badge of labor as a symbol of degradation. Man who works honestly, no matter how humble his occupation, is entitled to the respect of his fellowmen. The only safety of labor lies in organization, he declared. The connection of the Brotherhood with strikes was given attention and it was stated that during the sixteen years of its existence, its members had only been engaged in two, one of which was the Burlington strike. The speaker defended the Brotherhood's position in that memorable contest, and said although the men were defeated they were not degraded. The Brotherhood was opposed to strikes. Arbitration, mutual concessions and compromise were the means adopted to settle differences, and the strike came only as a last resort. It was their desire to meet railroad officials a generous half-way. When capital and labor should meet in true equality strife and strikes would come no more. The speaker paid a deserved tribute to the mothers, wives and sisters of the members who had aided and encouraged the good work. The speaker closed with a poetical quotation, and the meeting was at an end.

Seldom has a more auspicious day for workmen to exchange views found a place in the calendar; and from first to last the meetings indicated a splendid growth in ideas which prestige triumph in the interest of labor and the welfare of society. The splendid addresses delivered by Messrs. Irwin, Miller and Davis had the right ring, and showed how grandly the labor questions are growing in importance. Such meetings can only be productive of good results, and the more frequently they occur the better for all classes of our citizens.

* * *

INTERSTATE COMMERCE COMMISSION,
WASHINGTON, August 1, 1889.

DEAR SIR:—A knowledge of the facts regarding the relations which exist between the railway corporations and their employes is always of public importance and may be particularly useful to the Commission in some cases in order to enable it to perform its duties in such manner as best to subserve the interests involved. Believing, therefore, that you will willingly cooperate in obtaining the facts, you are respectfully requested to transmit to this office a reply to the following questions:

1st. Is there an insurance fund, guarantee fund, or any other fund from which the members of your order may receive payment in case of sickness, or accidental injury, or from which their families may draw in case of death? If such fund exists please state when it was established, and whether by the railroad corporation or the employes; how it is accumulated; how maintained, and give any other facts that may be important to a full understanding of its history and workings. If no such fund exists, please state if its establishment was ever attempted; if so, to what extent, if at all, the attempt succeeded, and why it failed.

2d. Does your order insist upon any rules of apprenticeship, and if so, what are they? If a fireman or brakeman can only become engineer or conductor after a term of service, please state what that term is.

3d. In the case of engineers and conductors,

are their grades of service recognized either by the order to which the employes belong or by the employing company? If so, what are those grades; and what are the conditions for passing from one to the other? In the case of men engaged in shop work, are promotions made from the ranks of the employes or are men brought from the outside to fill the positions of foremen and the like? If no recognized custom exists, please state whether it has been the subject of discussion hitherto, and what have been the impediments, if any, to its establishment. Copies of papers or documents bearing upon these questions and calculated to elucidate the subjects will be thankfully received.

By order of the Commission:

EDWARD A. MOSLY,
Secretary.

In the foregoing circular, the fact appears that the Interstate Commerce Commission, are giving all subjects pertaining to railroad operations, their attention, and the reports that will be made to them upon subjects referred to in the circulars, addressed to corporations and organizations, are certain to make interesting reading. After the information asked for, is obtained, people will be anxious to know what use the Commission will make of it.

* *

NOTICE is now made that in the near future passenger coaches are to be constructed of steel. The inventor is a gentleman by the name of Ford, and backed by capitalists, the cars are being made in Chicago. The distinctive feature of the car is the fact that it is all iron and steel. The roof, sides and ends of the car are made of steel boiler plates riveted together, and it is nothing more nor less than a big boiler. It is not quite round, however, being somewhat the shape of a horseshoe—the round part being the top. In the bottom, it is said, are several steel girders packed in cement much the same as in the pullman cars. Along the sides is an array of windows precisely similar to those of an ordinary passenger coach. The top of the car is destitute of the heavy roof and ventilating arrangement that is seen on ordinary cars. It is said that ventilation is to be secured by pumping air into the car through pipes. These pipes in winter will furnish warm air. There is also a system of ventilators around the windows. The inventor says it won't burn up, it will last longer, it won't telescope in a collision, and it is cheaper. If, as is claimed, the steel car cannot be telescoped, it will be popular from the start, and the traveling public will wish Mr. Ford success.

* *

It is told of Austin Corbin, the Czar of the Philadelphia & Reading Railroad, that he recently received a dividend certificate as a stockholder of some road, and was greatly elated. No doubt of it. It is the nature of all human devil-fish and sharks—they are happy only when money pours into their insatiable maws.

A. B. OF L. E. BUILDING AND LOAN ASSOCIATION.

While in Keokuk, we were so fortunate as to have a conversation with E. C. Wells, Esq., Chief of Division, No. 56, B. of L. E. This Division, with eminently clear perceptions of economic questions, has organized, under the laws of Iowa, a building and loan association with the following title: "The Keokuk Building and Loan Association of the B. of L. E." The shares are placed at \$100 each, payable in monthly payments of \$1.00 each, and firemen, members of the B. of L. E., are permitted to become shareholders, and members of the association, may take as many shares as they think they can carry.

The purpose in view, is to build in Keokuk a B. of L. E. Hall for the use of Division No. 56, and the enterprise has met with such favor, that the building will be erected at an early day. The building will be so constructed, as to have business and office rooms for rent, and it is believed that independent of conveniences accruing to the Division, the investment will pay handsome dividends. The association will loan funds to its members only, and in this way it is believed many firemen and engineers will be able to own their own homes, a matter of supreme importance to them.

We like the idea, and see in practically carrying out immense benefits to them who participate in the enterprise. It is a new departure, and one that offers inducements to engage in a venture which promises financial prosperity with scarcely a chance for loss, indeed, when properly managed there is no chance for failure.

In the year 1492, Christopher Columbus discovered America, and in 1892 the four hundredth anniversary of the event, the United States proposes to celebrate it by a grand inter-national exposition. A number of cities are bidding for the honor of having the Exposition, notably New York, Chicago, and St. Louis. Congress will be asked to help by making a liberal donation of money wrung from the pockets of the people, by an iniquitous system of taxation. Capitalists, whose interests are identified with the cities named, are expected to subscribe liberally and already Chicago has a guaranteed subscription of \$5,000,000. But when the Vanderbilts, Astors and Goulds begin to subscribe, \$5,000,000 will be a mere bagatelle. But after the money is subscribed, after Congress has voted more millions to swell the fund and give pomp and circumstance to the anniversary, what will be wanted? The working man—and first of all the "common laborer." Common labor, in the business affairs of the world, is like common sense in the business affairs of the world—it is fundamental.

THE FATE OF A SCAB.

The Chicago *Herald*, in a recent issue, has the following:

Charles Drake was locked up at Hinman street Station last night by Officer Fox for obtaining money on false pretenses. He represented himself as a gas inspector and made a canvass from house to house in the Hinman, Canalport and Deering street police districts, and collected as gas dues from poor people from \$2 to \$5 at each house. He has been wanted for this offense for two months. He must have realized several hundred dollars. He was identified last night by a dozen victims. He resides at Paulina and Nineteenth streets, and was a scab engineer in the great Burlington strike.

The scab, Drake, is, doubtless, a fair specimen of the scabs employed on the C., B. & Q., when that corporation decided upon a policy of injustice to its faithful employees. The poor devil robbed poor people of small sums, and will, doubtless, wear the stripes and serve the State, while colossal scoundrels, who have robbed poor and rich of thousands, where Drake got only pennies, are enlogized for their brilliant success in life. But after all, the big fellows are likely to squeal for a drop of water to cool their parched tongues as long and as loud as the scab.

SPEAKING of a railroad to the top of Pike's Peak, the signal service officer stationed up there recently said: "Sometimes I stand at the window with my telescope. The wind without is keen and cutting as a knife. I can see the houses of Colorado Springs, twenty miles away, the visitors sitting in their shirt-sleeves, sipping iced drinks to keep cool, and the ladies walking about in white summer robes. I lower the glass, the summer scene is gone. Green trees, animal life, men and women, fade away like creatures in a dream, and I am the only living thing in a world of eternal ice and snow and silence." During the winter months the amount of travel to the summit of Pike's Peak will not be large—except of those who have the North Pole fever.

GERMANY has her share of troubles with her railroads. According to the official statistics there were in that country in 1888, 4,577 cases of tire breakage on 37 different German railroad lines, covering a length of about 23,262 miles. To these were due 26 derailments and 268 train delays. Examination showed that in 1,499 cases fracture was due to poor material; 772 breakages are attributed to low temperature or sudden changes of temperature; in 751 cases brittle material was responsible, and in 1,015 cases the cause of fracture could not be determined. It was shown that the most unfavorable results were recorded with puddled steel; next in order came wrought iron, and finally cast steel, Martin steel and Bessemer steel.

* *

LABOR IMPORTATION.

A press report from New York of July 12th says:

"Secretary of the Treasury Windom this morning approved of the course of the Emigrant Commissioners in detaining the emigrants who were sent to Agent Neil of the Union Pacific Railroad by Wright & Son of London. He ordered the immediate return of every man sent to Agent Neil under the law prohibiting the importation of contract laborers."

What necessity is there for the Union Pacific or any other railroad or other corporation importing labor when the country has tens of thousands of able bodied men wanting employment? No corporation goes to the trouble of importing men for the mere wish to give them employment or because their business is suffering for want of workmen, who cannot be found at home. Some other motive is back of it.

A cheaper and more docile class of workmen than America contains is, perhaps, wanted; such as will ask no questions as to pay or treatment, or where they will purchase their supplies or grumble at the price charged, and that are unacquainted with labor organizations.

Such a class may not make good citizens or aid to build up a country along a railroad system, but they tend to increase the flow into speculators' pockets, and at the same time can be used to starve the autocratic, high notioned citizen workmen into submission and to have less elevated notions regarding their individuality and more respect for the wishes of master.—*Union Pacific Employes Magazine.*

Manifestly, the time has arrived for plain talk. There should be no mincing of words, when a subject is up for debate, as important as that which relates to labor. Who are the men who go to Europe; who seine the slums for men; who have no more conception of citizenship than so many Texas steers? They are men of capital—at the head of great industries, educated men, generally professed christians, of the Phari-see persuasion. They make long prayers and "devour widows houses." They are the enemies of their country—the enemies of American workingmen. Their purpose is to Russianize the United States, Chinaize the country, and yet, they are the usual villains who prate most of their country, of its prosperity, of its institutions, etc. They are the men, who water stocks and corner food products, traitors to God and country. We have a law to send the victims of their treason to the workingmen of the country, back to their despot cursed home. Why not amend the law, so that the rascals who contract to bring the men to the United States, to impoverish workingmen, shall be declared felons, and sent to a penitentiary to wear stripes as justly merited as if they were burglars?

* *

It is stated that "during the first half of this year 690 miles of American railroads went into bankruptcy and were put in the hands of receivers. They represent a bonded capital of \$66,458,000, and a stock issue of \$58,112,000, a total capital sunk of \$125,579,000. It is admitted that the railroad wrecks

of the second half of the year will exceed those of the first. The situation is about as bad as that of 1873, and is not at all reassuring to those who hope that a general panic may be avoided." Is the foregoing the right way to state the case? The stockholders lose, the bondholders get the roads. As a consequence, if the stock issue represents the cost of the road, and the bondholders get them for \$66,458,000, then in that case, the amount "sunk" is only \$8,346. Indeed if the roads are worth what they were bonded for, and the bondholder takes them at that amount, the question arises, What has been sunk?

* *

Labor Advocate wants people to think of Patrick Henry's declaration, "We can only judge the future by the past," and then invites its readers to look at the past, as follows:

When Egypt went down, three per cent. of her population owned ninety-seven one-hundredths of the wealth. The people were starved to death.

When Babylon went down, two per cent. of the population owned all the wealth. The people were starved to death.

When Prussia went down, one per cent. of the population owned all the land.

When Rome went down 1,800 men owned the world.

For the past twenty years the United States has been rapidly following in the footsteps of these old nations. Here are the figures:

In 1850 capital owned thirty-seven per cent. of the nation's wealth.

In 1870 the capitalists owned sixty-three per cent.

In 1880 they owned seventy-six per cent.

Just think of it! Two million own three-fourths of the fifty million.

The two million are idle and untaxed, and draw into their rapacious maws, at least three-fourths of all the wealth actually produced by the working masses. A burning shame.

The result is near and is inevitable. Hearken to our words. Don't turn a deaf ear, but prepare for it. Educate, emancipate.

All of which is good, very good. But if education is to be worth a farthing to the ton, workingmen will organize; they will dismiss aristocratic ideas, and when organized, they will federate—federation means emancipation, as no other word means it. Divided they are conquered—federated they are victorious.

* *

It is stated that the journey around the Congo cataracts which now takes between three and four weeks, will be made in two days by the trains of the Congo railroad, which is now in the course of construction. The locomotives will weigh thirty tons each, and the speed at first will be about eleven miles per hour. Trains will be run only during daylight. There will be three intermediate stations on the 225 miles of track. The railroad expects to pay expenses from the start, as the outlay for carrier service over its route already exceeds \$450,000 a year.

A LABOR DAY ADDRESS.

The workmen of Little Rock, Arkansas, turned out two thousand strong to march in a procession September 2d, and the demonstration was imposing. The Mayor of Little Rock, Hon. W. G. Whipple, made the principal address, which was reproduced from the columns of the *Little Rock Evening Call*. The Mayor's theme was the "Dignity of Labor," and he spoke as follows:

FELLOW-CITIZENS: This large assemblage and the magnificent procession to-night of men specially interested in various industries of the city, suggest the appropriate topic for this occasion. Your respectable, earnest, orderly and manly appearance and conduct, the principles you advocate, combined with the pursuits you follow, suggest as the proper topic to-night the dignity of every form of honest industry, and there is no greater truth than that. It seems strange that labor has not always been respected as it deserves. It has ever been the chief discipline of man, and the main source of his wealth. From the exit from the garden of Eden, where man dwelt first in indolence and then in sin, labor has been his stay and support, his solace and delight. Labor evolved civilization from savagery. Labor established and developed the nations of the earth. Labor has given man all that he values. Industry builds him up physically, elevates him morally, and expands and polishes his mind, and labor alone enriches him. Labor founded this mighty nation. Our forefathers found it a howling savage wilderness. Their muscles subdued the savage, leveled the timber, ploughed the ground and produced the crops. Their busy brains worked out the great political problems, whose successful solution has placed our nation on a pinnacle from which it receives the admiring homage of all the other nations of the globe. Labor has brought Arkansas and Little Rock where they now are, and is required to complete the work and place this state among the foremost of the nation in every essential particular, and put Little Rock among the galaxy of the brilliant cities of the American continent.

A new era has dawned for labor, especially in the sunny south. Here, owing to an unfortunate and depressing industrial system, for the origin of which the south was not solely responsible, labor has not always been honored. This is because labor was snuckled. In that period the south made some progress for God had impressed upon the soil such fertility that it would laugh with the harvest even when only tickled with the hoe. But now the south is being rocked from end to end by a great industrial movement. Organized labor is required to bring out its iron deposits, unequaled on the earth; its coal, spreading with a breadth which knows no limit; to build up its factories and mills and railroads, and place the south on the same high plane with the rich and vigorous north. To do this we must sink politics in industry. We have had too much of politics. We should drown it out of business. Our political institutions are now old enough to take care of themselves. Organized labor can draw off the minds of men to the engrossing subject of our material growth, and so substitute for the gospel of hate the gospel of good fellowship. For half a century our beloved section has been the cotton center of the world. It is destined to be the world's cotton manufacturing and iron working center.

He is the king of men. To gain a near view of his worth, compare him with the lazy man, his opposite. What is he? The drone of the hive, fit only to be driven out by busy bees in disgrace. Labor vitalizes man, gives him health, strength, height and breadth. Modern society, especially American society, has an intolerance of dudes and loafers which is growing. In no country on earth is the man who works more highly re-

spected, and nowhere is he more signally honored.

In no country on earth is labor ennobled as in this. This is shown in the most conclusive practical way by the class of men whom the people delight to honor, and place in positions of the highest honor and trust. Our first President was a surveyor, who formed his body and character in the rough life of a surveyor in the primeval forests of Virginia. Another was a rail-splitter, who with horny hands sun-burnt with toil literally mauled rails. A third curled his nether extremities on the tailors' bench and worked crossed-legged in the simple dignity of honest toil. A fourth was a barefooted canal-boy who the living day drove mules on the tow-path. Go into any community in America and you will find the leading men are the greatest workers. Visit any factory, shop or office and show me the greatest worker there and I will point you to the coming man in that line of business. Work never hurts. Men do not overwork, but they rust out and they rot out. The only sure and certain way to hold on and to hold up in this modern and American rush of life is to work, work, work. And work is sure to win. Men who apply themselves to work are never miserable—they never commit suicide. They are the happiest of men. The table is the most delicious to them, and their bed the softest. Like Longfellow's blacksmith,

Their brow is wet with honest sweat,

They earn what'er they can,

And they look the whole world in the face.

For they owe not any man.

The man who works has friends. All things come to those not who wait, but who work. The man of labor is not a Micawber who waits for something to turn up; he goes to work and turns things up. You have united your efforts together in your various organizations to uphold the character of labor, to maintain the rights of labor and this is well. In union there is strength. You have as good a right to form labor trusts as capitalists have to form their trusts. Such combinations are as old as Rome and Greece. They existed under Numa, and are heard of in China and India, and abound in medieval Europe, especially in England. Craft guilds flourished in every city of England in the sixteenth century.

You have a legal right, a God-given right to stand together for your rights under the law. To protect yourselves. To guard your class and classes. It is your duty to unite for this purpose, that you may contend with equal advantage with your opponents, for opponent you have. Therefore it is well to have an annual Labor Day, and to observe it as you have done, in a perfectly orderly way, firmly insisting on your rights and all the privileges to which you are entitled. I have examined your public platform and find nothing that is not worthy of endorsement by any reasonable man. You cultivate the humanities of your order. You look after your deserving needy, and insure a respectable burial to your dead. There is one plank to which I wish specially to call attention: You aim to substitute arbitration for strikes as a mode of settlement of disputes with capital. Arbitration is the coming day. Strikes have not of late, I believe, been successful. They are carried on at cost and sacrifice; and involve great misery and distress. Look at the scene being enacted to-night on the banks of the Thames. More than 100,000 laboring men are there out of employment. And how many hundreds of thousands are there made up of wives and children and other persons dependent upon these workers. The sum total of loss and accumulations is vast and irrecoverable. Arbitration might have prevented this sacrifice. No officer of man can demand of your labor unions more than that you do to others as you would be done by. You have a right to command your own services, to say whom you will work for, when you will work, how many hours, and at what wages. No one

can find reasonable fault with you if you also concede the same right to others.

Concluding, I will call attention to one more phase of this question, namely, the true relations between capital and labor. While, should there be any conflict between these two fundamental interests of society, I should, from an irrepressible instinct, side with labor; I think their true relations are those of harmony and peace. They are mutually inter-dependent, and must coexist or not exist at all. Capital requires labor to be productive, and labor needs the aid of capital to furnish it with appliances. Labor should not be jealous of capital, and capital should not be complacent toward labor. Why should it? Labor is the creator of capital, and commerce stands it. Men are not first rich and then industrious: They are first laborious, and their labor makes them rise. In this country the worker of to-day is the millionaire of to-morrow, and the accidental rich man of to-day may be to-morrow's pauper. Labor and capital should move on together as did our first parents when they turned their backs upon Eden, and took their way into this world of labor, hand in hand.

* *

DURING the latter part of August, the "dock laborers" of London, goaded to desperation by the injustice of their employers, struck for a pitiful advance in wages. All appeals for justice had been denied. The "common laborers" for such is their designation, were treated as of no consequence, when they demanded redress of wrongs inflicted. There was nothing left for them but to submit to their tyrants or strike. On August 31st, the cable announced that "500,000 men will march to-day," and that "the situation has become very serious, all trades are paralyzed and prices of all necessities from coal to coffee have been forced up. Covent Garden and other large markets are almost empty. Steamers filled with fruit, flour and vegetables block the Thames. All the produce is rotting in the holds. The supply in the shops is very small and many restaurants find it impossible to feed their patrons. The river from here to Gravesend is crowded with craft which cannot be unloaded. Scores of vessels have sailed away to other ports in the hope of being able to unload there." The cablegram shows the importance of the common laborer, in carrying forward the world's business in every department. Since August, up to the day we write September 11th, the strike has continued, with varying indications of settlement in the line of justice to the "dock laborers."

* *

SOME one rises to remark that if conductors or porters or some other person, when sleeping cars at certain places are switched about, would inform passengers who leave them to take meals, or for a promenade, where such cars will stand when the switching is done, they would highly appreciate the favor. As now managed passengers must go with the cars or run the risk of being left.

THE GRAND OFFICERS OF THE FEDERATED ORDER.

Each of the federated orders, the brakemen, the switchmen and the firemen, have three or more Grand Officers. These Grand Officers are constantly visiting subordinate Lodges of their respective orders throughout the country. They are constantly on the "go." It is a duty imposed by the laws of the various orders. In many ways, aside from the official duties imposed, the Lodges are glad to meet and greet the Grand Officers. They are occasions of unions, of feasts of reason. They unite the membership; they arrest friction; they create harmony and are in every way healthful. A suggestion in connection has been made. It is eminently wise and prudent, and we print it willingly, and suggest that it be adopted at once, and everywhere become a feature of the visits of the Grand Officers to subordinate Lodges. It is this:

When a grand officer of any of the federated Lodges has occasion to visit a subordinate Lodge of his order, that the visit become the occasion of a union meeting of the members of all the federated bodies. When the grand officers have met with the subordinate Lodge of his order and transacted the business calling him to the locality, let it be followed by a union meeting of all the members of the federated orders for the purpose of consultation, addresses, etc.; anything and everything calculated to bring the federated orders into closer and more harmonious alliance. Such meetings would be fruitful of incalculable good. It is a practicable proposition, and while not one objection can be urged against it, there are a thousand reasons for inaugurating the movement. We feel satisfied that it will be adopted and that many and great benefits will result to federation in consequence.

* *

"The past month," (July) says the *Locomotive Engineer*, "has been crowded full of fatal accidents, the most of which are attributed to broken wheels or defects in the track. Better wheels must be used under our heavy rolling stock. A six-dollar cast wheel becomes a powder magazine under a 60,000 pound car running at thirty miles per hour. Just how carefully the details of track kept up by men working from twelve to fourteen hours per day for about one dollar is not known, but railroad managements seem to do little if any figuring on this subject." Starvation wages and excessive hours, together with "six-dollar cast wheels," is not economy, it is far worse than color blindness, worse than spigot saving and bung-hole waste. There is nothing to commend it, and roads that practice such a policy by virtue of the cost of accidents will go into the hands of receivers. They ought to be catalogued so that people may avoid them.

THE TRIUMPH OF FEDERATION.

From the day that the *Magazine* declared for federating organizations of railroad organizations for mutual protection to the present, doubts have here and there, now and then, been expressed, first as to the feasibility of federation, as also of the benefits it would confer. At present the doubters are less vociferous and objections have degenerated to mere croakings.

Three great organizations have federated. From the start, from the word "go," federation has been a victory; a splendid triumph; not a disturbing element has appeared; harmony has reigned supreme. The feasibility, the wisdom of federation crushes every discordant note. The federated organizations are satisfied; indeed they are more than satisfied. It was an experiment. That it should have been a success from its initial condition, emphasizes not only the wisdom and the necessity of the undertaking, but the sagacity of those who had the courage to make the venture.

It was claimed by those who favored federation, that it would promote arbitration and prevent strikes. The Supreme Council has been in existence six months. In this time one grievance that threatened a strike, has been amicably adjusted by the Supreme Council. Some one may say "one swallow does not make summer." True, but one swallow tells of the coming of the vernal season, of summer, and of the harvest. One trouble has been adjusted. It shows what may be done in the future. It inspires confidence; it silences doubts, and presages "the good time coming" when strikes shall forever disappear, and a reign of good feeling exist between the railroad employer and employé. What more could be asked? Federation voices strength, harmony and victory, and those who want such things may advocate federation with the assurance that they are right.

We see it stated that "a few months ago the Pennsylvania Company in several departments adopted the plan of doing the office work by piece work instead of by the day or month, and has found that it was a very satisfactory arrangement. For instance, in the transportation department the car mileage is looked after in this manner, and two men will accomplish as much in ten hours as three men would under the old order of things. Then there is no trouble about over-time; each man who works by the piece working as many hours of the twenty-four as he chooses. The reports are kept up much more satisfactorily and the expense to the railroad company is really lessened." The point is this, two men do the work of three, and work as long as they please, and the expense of the railroad company is "really lessened." Necessarily so,

one man goes. There are thousands of men who will commit suicide, by overwork if money is in sight—work themselves to death. But men were never cheaper than now. Their death creates no ripple—ten stand ready to accept the task. The two men who work as many hours as "they choose," and thereby displace one man, may increase their income, but God have mercy on the poor creature who is displaced. Who will feed him?

* *

THE *Locomotive Engineer*, in referring to John Livingston, says:

We have been repeatedly asked to help crucify Mr. John Livingston, alleged president of the Railway Shareholders Association, who is making a howl about railroad men getting passes, and making considerable fuss one way or another—on paper. It has been discovered that this individual has sought passes from some of the roads himself, offered several radical remedies for strikes and strikers, offered to settle the Q. trouble, and tell who hit Billy Patterson. If Mr. John Livingston is what he pretends to be, and is, indeed, a living thing in the shape of humanity, he is an egregious ass. We are inclined to think Mr. John Livingston is some stuffed stool-pigeon for a fool foundry, a detective agency, or a newspaper. Ten to one he is making his kick to get the labor press and the labor leaders on record with some very inflammatory and indiscreet language. Our advice to the enginemen of the country is to simply forget that such a mummy exists, do your duty to your employers—the company—your officers and yourselves, and rest assured that the management of the roads will see that your delegates get to the conventions and home again—as they always have.

Don't be so tender of your "rights" as to froth at the mouth because an outside cur snarls at your bone—he won't get it.

Cæsar had his Brutus and fell, but he had an Antony to deliver his funeral oration. John Livingston, who aspired to be a Cæsar is also dead, and would be forgotten in a day, were it not for the stench his putrefying carcass emits.

* *

THE *Railway Service Gazette* remarks that "denounced as pirates and robbers in Congressional reports, condemned by public opinion, shunned by all honest men, and engaged in a bitter, relentless war with all labor organizations, the management of the Philadelphia & Reading will, in all probability, again fail. But may it not be the policy of these robbers and pirates to again bankrupt the property? They thrive and grew fat when the property was before in the hands of a receiver. While the employés, robbed of their salaries, were starving, the receiver, manager and other high officers were drawing princely salaries." With such devil-fish as manage the Philadelphia & Reading the question is, how to get the money out of the road. If they find it profitable to wreck the property, that will be done; if to sail it as a piratical craft, and to rob friend and foe, that will be done. Corbin and his confederate freebooters are for making money out of the P. & R.

HINTS TO CORRESPONDENTS.

The *Magazine* has a large and increasing corps of correspondents. Our purpose is to talk to them freely and frankly. The *Magazine* has space for correspondents who have something to say upon topics in line with the purposes which the Brotherhood of Locomotive Firemen was organized to achieve; provided, always, that writers exhibit even moderate comprehension of the scope of the subjects which they discuss.

It is well known that many people talk and say nothing—talk at random—talk in a way that successfully controverts the proposition that “words are the signs of ideas.” For such talk there is no space in the *Magazine*. For writers who have ideas, however crudely expressed, there is always room in the *Magazine*, and their contributions are valuable and welcome. They are in demand and are wanted. They are read with interest and are prized for their contributions to the general fund of knowledge.

Some of these correspondents are amateurs, and consequently are not expected to appreciate fully, nor indulge largely in the graces of finished composition. But a few simple propositions they ought to comprehend and be guided by them. They can obtain good clean paper, plainly ruled. This done, if their penmanship is defective, they should write only on every other line. Skipping a line affords room for flourishes, and gives the editor a chance to correct inaccuracies without having to rewrite the matter.

A man who believes that he ought to write a letter to the *Magazine*, ought to be able to spell common words correctly. If he is not, he should purchase a small dictionary or spelling-book and study it night and day, until he is able to spell such words as he uses, correctly. And until he does this, except in cases of emergency, he ought not to write to the *Magazine* for publication. There is absolutely no excuse, in this age of cheap books, for such ignorance.

Pursuing the subject, a correspondent of the *Magazine* should take at least one easy lesson, requiring, say thirty minutes, in the use of capital letters. In correcting manuscript for the printer, the ceaseless use of capitals becomes an annoyance without a redeeming feature. In the matter of punctuation, always arbitrary, little need be said and errors are not exasperating.

We are constantly reminded of the “waste basket.” If correspondents would avoid it, they will do well to attend to the foregoing hints.

Again, correspondents will do well to be more select in choosing *nom de plumes*. Hitherto, and at present, there is, in some instances, a total disregard of all propriety in selecting literary titles, as, for instance, “Windy Jim,” “Polly poke the fire,” “Tal-

low Pot,” “Squealer,” and so on to the extreme of disgust. It is easy to find better titles, and we insist that it shall be done. Still further, we propose to eliminate vulgar slang from the contributions of correspondents. It will be better for the correspondents themselves to omit such stuff. It would dignify their utterances, and add value to their arguments.

It writing the foregoing we have the good of our correspondents, the good of the *Magazine* and the good of the order in full view, and the purpose is to adhere strictly to the program outlined.

* *

SAMUEL GOMPERS, Esq., President American Federation of Labor, Office 21, Clinton Place, New York City, on August 5th, issued the following circular:

Fellow Workmen:

We all recognize the necessity of spreading information and intelligence among the toilers of our country upon the Social, Economic and Philosophic questions of labor. For the purpose of furthering this object the American Federation of Labor has secured the services of three of the ablest writers in the country upon these subjects, to write three pamphlets. The pamphlets are:

First—The Eight Hour Primer. The Theory, the Fact and the Argument. By George E. McNeill.

Second—The Economic and Social Importance of the Eight Hour Movement. By George Gunton.

Third—The History and Philosophy of the Eight Hour Movement. By Lemuel Danryld.

These pamphlets are now ready for sale upon orders for them received at this office. The prices are, per copy, five cents; per dozen, fifty cents; per 100, \$4.00. Postage or expressage prepaid.

Recognizing that Labor Day celebration will give an opportunity for a large sale of these pamphlets if advantage is properly taken of it, we have concluded to request you to secure the services of a few men willing to undertake the sale of them at the place you propose to hold the celebration, so that the literature may more largely reach the hands of our fellow-toilers.

Upon all orders for sale at the Labor Day's celebration unsold copies may be returned to this office, and postage or expressage thereon will be returned to you. Please send in your orders at as early a day as convenient, in such quantities as you reasonably anticipate you can sell.

The pamphlets which Mr. Gompers is anxious to have circulated and read, relate to a question of supreme importance to every workingman in the land, and we indulge the hope that they will have the widest possible reading.

* *

THE cry is going the rounds that Austin Corbin's Philadelphia & Reading already has a large number of needy and suffering employes. No doubt of it, and the number will increase. Huns, Poles, Italians and Americans, a squirming mass of degraded humanity, nowhere else to be found on the American continent, nor, probably, on any other continent.

The *Cleveland Truth* remarks that

"The *Journal of the Brotherhood of Locomotive Engineers* is still being printed at a rat office and printers receive from \$3 to \$5 a week less than the scale. How about this, Mr. Arthur?"

The *Daily Huronite*, of Huron, Dakota, publishes the following:

An eastern paper boastingly says: "Blaine's son is a brakeman on the Grand Trunk Railroad." Well, what of it? Garfield's son is a fireman on the Dakota Central Division of the C. & N. W., and lives in this city.

We have on our table, fresh from the press, parts three and four of the *Hand Book of Calculation for Engineers*, a most useful work, published by Theo. Andel & Co., 91 Liberty street, New York City. The work will be completed in ten parts, and is sold at 25 cents per part.

MR. WM. H. SEWARD, who championed the "higher law" idea way back, and had faith in man, once said: "If you take the right side, the just side, ultimately men, however much they oppose you and revile you at first, will come to your support; earth with all its power will work with you, and for you; heaven is pledged to conduct you to complete success." God help working men to take the right side, and organize and federate. Heaven is only pledged to help those who try to help themselves.

THE Erie Railroad Company has already put upon the road several trains of vestibule cars between New York and Chicago, and has also put in service an engine which is the largest passenger engine in the world, and it is performing so well that the company will have ten more built. The engine is a ten-wheeler, three pair of driving wheels, five and one-half feet in diameter, and the engine is a monster in all respects. It will haul fourteen passenger coaches over the road at any desired speed. The demand is speed and comfort. As to safety, those who want to go fast are willing to take the chances.

THE melon cultivators of the South are grumbling about the railroads, and charge that they are killing the industry by excessive charges. The *Charleston News and Courier* says on one car load of melons shipped the freight charges were over one hundred and fifty dollars, which left no profit to the shippers. On another car load the charges were \$185, the net proceeds to the shippers being \$12. Two additional shipments yielded respectively a profit of about eight dollars to the growers. In consequence of this state of things the farmers are said to have determined to abandon the melon business.

FRENCH savants have concluded that compressed air is the thing to operate street railway cars, and the city of Lyons will adopt the system which has proved satisfactory in other French cities. The cars are said to run smoothly and with but little noise, while the machinery is simple and does not require a skilled mechanic to superintend it. The cost is less than with horses, steam or electricity.

It is stated that one of the most astonishing engineering feats of modern times will be the railroad to the summit of Pike's Peak. The final surveys have been completed and construction will be commenced shortly. The route will be about nine and three-quarter miles long, and will follow the old trail a large part of the way. The road will be built upon the same principle as the one which ascends the Rigi in Switzerland. It is calculated that the ascent and descent will each occupy about one hour and a half. It will be run entirely for the accommodation of tourists, and there is no doubt but that it will be crowded to its full capacity during the summer season, as the view from the summit of Pike's Peak is probably unequaled in America. The enterprise is backed by such men as Marshall Field, of Chicago, and Cable, of the Rock Island railroad. Nor will it be just to get the unequaled view that will be the inspiring motive of tourists to make the ascent. With the mercury at 90° in the shade, thousands will go up just to be cooled off, and for their accommodation, there will be, doubtless, way stations, and it would not be a bad idea to have them named suited to temperature.

THE *Rocky Mountain News* of August 9th, contains the following paragraph:

The failure of the Burlington strike has been a heavy load for Chief Arthur to carry. It was the Sedan of the supposed to be invincible organization of the Brotherhood of Locomotive Engineers. It left that body in a changed light before the country. The disaster was sustained in a fight in which all the odds of precedent and public sympathy were with the men and against the corporation. In one sense it was a test of the strength of organized labor, with right on its side, against the power of organized capital. While it has demoralized the Brotherhood in no small degree and led to at least two distinct factions, the worst consequential phase of the defeat was its discouragement to those who have hoped for equity through united labor. The Burlington affair is to be reviewed at the international session to be held in Denver, as a result of what promises to be a bitter contest between the friends and opponents of Mr. Arthur.

Also the following:

The shattered condition of the Brotherhood of Locomotive Engineers, as a result of the crash with the Burlington, ought to suggest the inherent weakness of labor organizations as at present constituted, and thus pave the way to future possibilities of improvement.

THE BROTHERHOOD.

OCTOBER, 1889.

Suggestions.

MR. EDITOR:—I have read with great interest the various articles pertaining to the relationship between the two brotherhoods, which have appeared in the *Magazine* from time to time for several years. At the time of your "reception" at New Orleans to the present, I have been opposed to the policy of the faction of the B. of L. E. which has controlled their conventions. It is unmanly, unbrotherly, and unchristian. In view of the fact that they have in their motto the word "Justice," their action becomes hypocrisy. By *action* I refer to every act of theirs, from New Orleans to the appointing of the committee of nine at Richmond, in which the B. of L. F. has been treated as a nonentity. The indignation which has been manifest on the pages of the *Magazine* is righteous and I hope to see it continued till there will be no necessity for it. Mr. Editor, I for one have seen the time when I was almost ashamed to have it known that I had withdrawn from the B. of L. F. to enter the B. of L. E. I have in times gone by, vowed never to do so, but after a while I began to see light through darkness and I could see that the interests of both orders demand that when a man has become an engineer he should enter the B. of L. E. The service requires an organization of engineers, separate and distinct from the firemen and others. I am opposed to amalgamation or anything approximating it, but we must have a fraternal spirit between the orders. We do not want to conduct ourselves or our organizations in such a manner that outside parties will be inveigled into the belief that we ride and you walk. It is a fact that the engineers have imagined themselves to be above labor organizations. This is the trouble and it will never be overcome until there is a change in their grand office. Mr. Editor, the teachings in your *Magazine* are adverse to the consummation of this change, viz: advising the members of the B. of L. F. to stay in their Order and keep out of the B. of L. E. As long as the B. of L. E. contains the majority who are known as the "fossil" element, there will be no change. What the B. of L. E. needs above all things else is an infusion of new life, a la Brown-Sequard Elixir, and the only place this can come from is the B. of L. F. Mr. Editor, why do you not encourage the firemen to go into the B. of L. E.? In no other way can you see the successful consummation of what you have been so long and faithfully contending for. You certainly cannot distrust them. The firemen of to-day will never forget the teachings of his Order as with "Charity for all and malice toward none" he strives to do what is right toward his neighbor and collaborer. With men of this char-

acter in the B. of L. E., those unjust laws will soon be a thing of the past. It is wrong for firemen to think that a man has given up his manhood and his inherent right to think and act for himself because he enters the B. of L. E. under the present conditions. He will carry his modern ideas into his new work and will do more good for himself and fellow-men than he will or can by remaining in the B. of L. F. Who can fail to note the rapid growth of that faction of the B. of L. E. led by that nature's nobleman, Fackenthal, and who among the firemen would belittle themselves by swearing allegiance to his standard? Not one. I hope that the members of the B. of L. F. will consider this question seriously. It is to their concern. Sometimes the longest way around is the quickest way home. I sincerely hope that what we all so much desire will come to pass this year but fear it will not.

Omar Heroy.

[In the foregoing communication, there are one or two things which suggest comment, as for instance: "Mr. Editor, why do you not encourage the firemen to go into the B. of L. E.?" The query could have been put in a different form, as follows: "Mr. Editor, why do you not encourage firemen, members of the B. of L. F., to renounce their manhood, their obligations, their fealty to their parent brotherhood, their self-respect, and join an organization, which by its legislation declares that not until they have done these things, can they wear its badge and march under its banner?"

The advocacy of such a procedure is not the mission of the *Magazine*. The great Brotherhood of Locomotive Firemen, was not organized to become the "breeding-pen," the "recruiting camp" of any other organization. It was not designed as a lying-in hospital, where engineers are born, to be kidnapped as soon as born, to swell the ranks of an order which has nothing but insult for our brother's *Alma Mater*. We would have members of our Order, who under its fostering care have become engineers, forever regard their parent brotherhood with filial regard. It conferred upon them benefits worthy of high commendation. To be required to disown it to join any other organization no matter what, is the very climax of insult, and such humiliating propositions and conditions the *Firemen's Magazine* under its present management is totally incapable of advocating or of regarding in any other light than that of unutterable scorn. The badge of the Brotherhood of Locomotive Firemen is one of unblemished honor. It symbolizes things of good report among men. To see a locomotive fireman, a member of the Order, tear it off and fling it to the wind or into the gutter, that he may wear some other badge is a proceeding that this *Magazine* contemplates with unmitigated aversion.

Says the writer: "The firemen of to-day

will never forget the teachings of his Order." Strange, and as sad and humiliating as strange, this is just what hundreds of them are doing. They "forget their Order;" turn their backs upon it. Quickened into life by it, nourished by it, they no sooner reap the rewards of its teachings and unwearying devotion than they strip themselves naked, crook the supple hinges of their weak knees, limp out of their parent order, and accept degradation at the behest of those who must have fresh blood, a *la* Brown-Sequard Elixir or perish. Some there are, who true as the needle to the pole, stand and withstand. They say I will join the B. of L. E., but it must be as a man—no degrading conditions. As a member of the B. of L. F., I am the peer of any man, and they say to the B. of L. E.: "By all the gods at once upon what meat do you feed that you are warranted in putting on aristocratic airs?" They are the salt of the earth, the light of the world—and while they live, move and have a being, the fortunes and destiny of the B. of L. F. are secure.—ED. MAGAZINE.]

ATCHISON, KAN., August 26, 1889.

Editor Firemen's Magazine:

As there has been a great deal said for the "good of the Order" in the columns of the *Magazine*, I should like to say a few words for the same purpose. There has been a great deal of howling done by different brothers on account of members of the B. of L. F., who are engineers withdrawing from the B. of L. F. and joining the B. of L. E., and I will say right here, that I believe that the reason for withdrawing from our Order by firemen who have been promoted to positions as engineers are that those men have learned by bitter experience, that the paternal feeling and idea of helping one another, is a delusion. As far as the B. of L. F. is concerned, there are Lodges of the B. of L. F. all over this country, where a traveling brother looking for work, will scarcely be recognized and unless he has got money and it takes lots of it to travel with, his chances to go hungry are exceedingly good and the chances to get a job of firing at such places, are always slim, and if you ask any of the brotherhood firemen to introduce you to the Master Mechanics, they will look horrified and will tell you the old chestnut about the B. of L. F. man they introduced to and vouched for to the Master Mechanic years ago and who turned out a bad man. The country to-day contains a great many good firemen, who have dropped out of the Order on account of their inability to pay their Lodge dues, for the reason that they could not get work, for the firemen would not try and help. There are lots of non-brotherhood firemen, who have fired long enough to belong to the Order, but who never will join, for the reasons I have stated, and I say can they be blamed for not joining; not much.

O. F. Lonergan.

Change of Name Logic.

PINE BLUFF, ARK., August 26, 1889.

Editor Firemen's Magazine:

Much talk is going on in the *Magazine* about a new name for the Brotherhood of Locomotive Firemen. I have been a member of the Order for about three years, and have always thought well of the Order, and since I became a member have taken special pride in it. Our present name seems sufficient to me, and I think to the most of the brothers. It brings to every outsider's mind a clear understanding of what the Order is composed of. The Order is for the benefit of the firemen. It is not an order of engineers and hostlers, and I do not think it necessary to change a name that has answered our purpose for so long. Should Federation be possible, and all orders of railroad workmen federate, there is time enough to think about a new name. B. of L. F. is time honored. Let us hold on to it as long as we can. Every person who is acquainted with railroad affairs, be it ever so little, knows the Order of Locomotive Firemen. We stand well with all classes of men, and I think it will hurt the Order to make it B. O. T. L. If we change the name we must have new laws, new rules and regulations, and the end will be that a fireman will be a fireman no more.

Yours respectfully,

Louis Heller.

A member of No. 163.

[We ask attention to the foregoing because the logic (?) introduced is just the opposite of what the writer intended. The present name does not "bring to every outsider's mind a clear understanding of what the Order is composed of." Not only are "outsiders" misinformed by our present name, but *insiders* know that it expresses less than it should express. The Order is composed of firemen, hostlers and engineers, and hence is not exclusively for the benefit of firemen. It is for the benefit of its members. No one objects to the name "Firemen." No one controverts the triumphs achieved in the past under the old flag. A new name is urged because a name is wanted to express real conditions—the result of the triumphs of the Order. The writer says "should federation be possible," when federation is an accomplished fact; but federation, whether accomplished or to come, has nothing to do with the proposition to change the name of the Order. And since the Order has a membership composed of firemen, hostlers and engineers, it is in order to introduce arguments why they should or should not be recognized. If we can find a name that includes all and does injustice to none, reasons should be given, if reasons exist, why justice should not be done to all. The reference to a change of laws and rules need not be criticised, since such objections are easily removed.—ED. MAGAZINE.]

A REMINISCENCE.

Once upon a time, on the island of Manhattan,
There was a Union meeting, and speaking was
on the program.
Men were on hand, equal to Webster, Clay or
Grattan,
Together with another oratorical man.

For instance, there was Depew, the after dinner
trump,
And there was Dana, the editor of the *Sun*,
And there was Mayor Hewitt, who on the rostrum
is no chump,
And there was Hannahan, who also can speak
some.

'T was in Tammany Hall where the orators cor-
uscated.
Where Dana, Depew and Hewitt he'd spell-
bound every man,
But the audience, though anxious, patiently
waited
For their favorite, Vice Grand Master, J. J.
Hannahan.

The lazy hours went by with plowing ox team
pace—
The gas lights burned dimly, and the moon she
went down,
But Hannahan was ready, and on his radiant
face
There were only pleasant smiles—and never an
angry frown.

At length the time arrived for our Vice Grand to
speak,
And quick at the foot-lights our champion ap-
pears,
Gods! but the boys made the rafters creak
With thundering applause and cheers follow-
ing cheers.

The theme was Conscience, Courage, a Willing-
ness to Die
For a principle as readily as for a Kingly
Crown,
And to make things clear, and show the reason
why,
The orator introduced felicitously old John
Brown.

When he got to old John Brown on the scaffold
high—
When he got to old John Brown in the battle's
van,
The orator concluded to just turn his eye
Upon his manuscript, to see how the story ran.

But he did not scorn repeating, while fumbling
for the page—
The name of John Brown, in agony he called—
John Brown, J-o-h-n-B-r-o-w-n, until it seemed
an age—
And finally it leaked out that the orator was
stalled.

With perspiration flowing, and eyes wildly pro-
truding,
But still hanging on, and shouting J-o-h-n
B-r-o-w-n.
The audience, all silent, was evidently conclud-
ing,
That Hannahan thought old John was in
town.

But the end came at last, and it came right in
the middle
Of Hannahan's oration; a most provoking
thing—
And Hannahan looked like Ole Bull, where his
fiddle,
When tickling a high note, busted a string.

CAIRO, ILL., August 15, 1889.

MR. EDITOR:—Although I am not a member of
your worthy organization, I am quite interested
in the noble work of your Order, and am highly
pleased when my brother receives his *Monthly
Magazine* to devote a few moments in reading
what the other members of the Order are doing.
I see in your last copy an interesting as well as a
valuable article, entitled "Woman's Work," of
which I may say the author is worthy of its
publication. It should be so arranged that each
and every young person (as well as married ones)
could read and reflect, as it is known to all that
there is nothing as pleasant on this wide earth as
a happy home. I am very happy to see all our
organizations doing so well. Yet we have a few
black sheep amongst our fold. For instance those
that have a desire to sit, stand and hang around
a bar-room or saloon where drinking, card-play-
ing and fighting constitute the amusement.
Allow me to say to the members of every organi-
zation, beware of such, as you may have good
intentions when you leave your place of resi-
dence and fall a victim to some of these evil as-
sociations. Just such things as this breed a bad
name for your Order and reflect upon those who
do try to carry themselves straight and manly.
Referring to the subject federation, I am happy
to say this vicinity is overjoyed by its establish-
ment. Let us all be brotherly, and be of deter-
mined minds and not bear malice towards any
one. Good soldiers is what we want in our Or-
ders, not cowardly and unbrotherly ones who
will one minute be your friend and the next
your enemy. Let our motto be: "May friend-
ship always exist," and another object should be
to devote a little of our time to our journals and
magazines. There is not an issue but what con-
tains something valuable and it should be our
purpose to keep ourselves well read in the labor
literature of the times.

Switchman.

TULARE, CALA., August 12, 1889.

Editor *Firemen's Magazine*:

I will drop a few lines to let you know that we
are not all deadheading.

Our Lodge is in a flourishing condition, and the
boys are all doing as well as could be expected.

I see quite a good deal is said in regard to
changing the name of our Order. Now I don't
see any particular need of changing the name at
all. The Order has lived and prospered for six-
teen years under its present name, so why
change it? I think our initials ought to be dif-
ferent from the engineers, so we wouldn't all
wear the same letter. Most of the boys here are
satisfied with the present name. There is not a
blemish on the B. of L. F., and everybody knows
and respects the Order. Yes, I think the "Broth-
erhood of Locomotive Firemen" is the right and
only name for our Order. I am kind of timid
about sending this in, as it is my first attempt,
but I want to let you know that we California
fellows have thought of this matter too. Hop-
ing this will reach the eyes of the public, I re-
main,
Yours fraternally,

A. W. M.

"Just In Time's" Grand Ball.

NEW YORK, August 29, 1889.

MR. EDITOR:—The night of August 14th was a "red letter" one in the history of Just In Time Lodge, No. 149, B. of L. F., the occasion being the eighth annual Summer Night's Festival that was held in Sulzer's New Harlem River Park, and to say that it was a great success would be expressing the result very mildly, as undoubtedly it was the grandest affair, socially and financially, that has ever been held under the auspices of 149, the credit of which is mainly due to the able manner in which the several committees conducted their duties, especially the committee of arrangements, Bros. Ernest W. Gregory, Albert H. Hawley, Theodore H. Schroder, George Bernsten and Arthur A. Davis. The Park was beautifully illuminated with electric colored lights, and the decorations of the dancing pavillion were masterly pieces of art and workmanship. Prof. F. S. McAuliffe's orchestra rendered the music in a very satisfactory manner, and in the last figure of the quadrilles, gave an excellent imitation of a locomotive in motion, with the aid of a locomotive bell that was kindly loaned to the Lodge for the occasion by Mr. P. M. Gibson, Ass't Master Mechanic of the Hudson River Railway Co. Bro. James F. Hough was the floor manager, and Peter A. Donohue the assistant floor manager, and many were the expressions of approval heard of the manner in which they conducted their duties. Bros. Charles E. Townsend, Henry Buhler, George Emory and William Wilson, were the floor committee, and Charles J. Johnson, Alex. Borkland, A. Blackett, George Squires and Horace Roberts, the reception committee, and together they made things hum, without causing any "hot pins, journals, boxes," &c. Each lady on entering the Park was presented with a pretty fan, on which the programme of dance was printed, and each lady and gentleman received as a souvenir of the occasion, a book, containing a short history of the Lodge and a short biography of its six head officers. Although it rained steadily all day and evening, when it came time to commence the festivities, the pavillion and balconies and boxes surrounding it were comfortably filled with the members and friends, with their wives and best girls, which proved that a little thing like rain could not keep them from being "Just In Time" to partake of the pleasures of the occasion. The grand march was led by the Master, Bro. James F. Hough and his wife, followed by Past Master Bro. George Ford and his wife, who very ably held up their ends in the long line of handsome couples. All of the several Lodges of the B. of L. F. in and around New York were well represented, also a large number of members of the B. of R. B. and the S. M. A., which testified that the three organizations are united for pleasure, as well as profecton. Past Master Bro. Francis C. Donigan was present, and showed the boys that he was no greenhorn at ringing a locomotive bell. Bro. J. Peterson arrived about nine

o'clock, and like a good many others, was only going to stay a short time. He left at four o'clock in the morning very regrettingly. Among other things that were seen and heard were the following: That Bros. Donohue and Hawley were all smiles when in the presence of certain parties; that Bro. Dewey had his usual number of lady friends; that Bros. Johnson and Schroder would die of thirst if they waited till Bro. Hawley fulfilled his promise to them; that Bro. Wasnidge worked hard for the festival's success; that Bro. Van Zandt's best girl was absent; that there was tremendous applause at the termination of the "locomotive quadrille;" that if the weather had been clear, where would they place all of the people who would have been there; it was a grand affair; never had such a lovely time; the fans are a splendid idea; can't you have another one next month; when will you hold your next affair, and numerous other similar expressions. The dancing commenced at 9 P. M. and continued until 4 A. M., when the assemblage adjourned, to meet again on the evening of February 20, 1890, when 149 will hold their eighth annual reception and ball at the Lexington Avenue Opera House. Among those present were the following: Mr. J. Lynch and wife; H. Davis and wife; J. W. Reilly and wife; F. R. Elliott and wife; G. Muellaus and wife; A. Miller and wife; S. Benwell and wife; E. T. Quade and wife; B. Borkland and Miss Master-son; S. Marks and Miss Harnot; F. Davis and wife; J. Moran and Miss Taylor; Charles Thorger and Miss Helene T. Hough; A. A. Breiterberger and sister; H. C. Geiser and Miss B. Cooper; W. A. Masterson and Miss Burke; J. Benning and Miss Nelson; A. Jones and Miss Palmer; J. J. Bantar and Miss Wise; M. McCarthy and wife; G. Bayne and wife; E. Williams and Miss Burke; Wm. Chambers and family; F. C. Donigan and wife; H. Hosenbalg and lady; P. Peck and lady; E. Swerthannon and wife; F. Bloomfield and wife; J. Devine and wife; Wm. Page and Miss Masterson; Charles Townsend and intended wife; P. A. Donohue and lady; J. Clemmers and wife; T. Harriet, J. Davis, A. Van Tassell, N. Brown, G. Perry, J. W. Brown, W. Davidson, F. Mercer, D. Nolan, W. Welsh, J. W. Smith, C. Anderson, E. Chambers, H. Davis, J. Babcock and, among the others, was
Charles Coudrick.

SOMERVILLE, MASS., August 8, 1889.

Editor Firemen's Magazine:

I am glad to see the discussion of the new name becoming the absorbing topic in the correspondence. Those in favor and those against are the expressions of each Brother's views, and are straws that show the way the wind blows. We would not need an organization for any purpose if all of the people on the earth thought alike; by the different views we are able to arrive at conclusions of what would be best for the Order's general good in a most intelligent manner. I would like to have "S. W." explain why it would be necessary to change our laws and

constitution? They surely cover us now, and we have everything provided for but one, which you will find a little later on, but allowing, for the sake of argument, this to be the case, we could not become, even temporarily, disorganized, for we should work under the old until the new was law. Its a good deal like the old monarchical cry of the "King is dead, long live the King," in cases of that kind. I will say to "A. H. Tucker" that the best reasons that could be advanced for the repeal of those laws were advanced at Richmond, in the interests of the B. of L. F., but were scorned by the majority, and if they are changed at Denver it will not be done for the direct interest of the B. of L. F., but for selfish motives. So I say, let them alone, and take the line of strict neutrality, for we have all we can do to run our own Order.

I would like to know from "Jim Dooly" if it is really the case, that the Free Masons never changed their name to suit the conditions of the classes that they now represent, for I have been quite a student of Masonic history, a good deal of which I have learned by heart. I find that for a service rendered by a prominent public man, not a worker of wood, stone, or metal, that the honor of being Accepted as a Mason was conferred upon him, and others, and to distinguish between the actual and accepted, the name underwent the change which it now bears, Ancient, Free AND ACCEPTED Masons. I simply proposed the addition of the words, "And Engineers" to our title, and find quite a number of the men in different parts of the country that I have come in contact with who like it also, and the dilemma that the writer of "our new name" presents is done away with altogether, name and all, by the nickname, "Double Header." I won't have anything to say on that, for it sinks our new name at once.

Now, "263," where would you draw the line on patience ceasing to be a virtue, and what lapse of time is considered to be about right to prevent hastiness? Several years more? Now, "One of Them," you made me actually nervous by your tragic abruptness at the last of your letter. If you knew what a nervous man I am, you would be more careful; I could see before me an awful, solemn warning, brought back from childhood's days, when I first witnessed the tragedian, Edwin Booth. Please don't do it again. I consider those that leave us as poor timber, and not worth the attention bestowed on them, so place it on the raw material. And we don't agree in regard to name, but we do in regard to Bro. Frank Sargent, for I think that he is an honest, able, conscientious man, but why don't you give him the power to extricate the Order and himself from the trying positions that you have placed him in, in days gone by? Why don't all the Lodges profit by the past? Give him more power for aggressiveness. Don't take a back seat from anybody, but run our Order in the interests of its members. We have federation, now let's have the "Name."

Charles H. Trenholm, Boston Lodge, No. 57.

More About the Name Question.

LA JUNTA, COLO., August 8, 1889.

Editor Firemen's Magazine:

There has been so much said of late about changing the name of our good Order, that it seems impossible for me to keep quiet any longer. I cannot see the advisability of any change, and I fail to see any good argument in the *Magazine* that does favor it. It only goes to class us with men of every description who labor around an engine. This may be all well enough, but as I understand the situation, the causes that have led to this talk in favor of a change of name are few and small, merely to unite the firemen and engineers more closely. If this is to be done, and can be done in any manner, it should be in some other way than changing the name of the Firemen's Order. In cases that I am familiar with, there are young Engineers running regularly who were considered and *were* the very best kind of B. of L. F. men until their firing days were over. Now that they are B. of L. E. men, they say they are sorry they left the firemen to join the engineers, but they make no effort toward leaving the engineers to come to the firemen again. I know but little as to the differences existing between the two orders, and I can say for one that I have received best of treatment from almost every engineer I am acquainted with, and find them to be perfect gentlemen. At the same time, there might be among some of them a disposition to work against the Firemen's Brotherhood, and to stop, if possible, all promotions until the unemployed B. of L. E. men now in the country could be given steady employment.

My opinion is, that a change of name would be of more benefit to the B. of L. E. than to our own Order, provided they so wished to make it. If the engineers are working against the firemen, it is surely the wrong way out of the difficulty. If our young runners are going to be loyal to our cause, let them stay with us. Perhaps we cannot do as much for them as the B. of L. E., but why can't we? Yours fraternally,

Maloney.

[Here again, the reasons for a change of name are totally misapprehended. It has nothing whatever to do with the B. of L. E. It does not involve questions of personal relations existing between individual firemen and engineers—friendships and personal regards are entirely foreign to the subject. The Brotherhood is known as the "Brotherhood of Locomotive Firemen." It is more than that. It is a Brotherhood of Locomotive Firemen, Hostlers and Engineers. There stands the fact. Why not admit it? Why circumlocution and evasion? Why introduce objections which seek to belittle facts? The simple proposition is to find a name which in its significance expresses the condition of the Brotherhood in its membership. There is something in a name, why not recognize this fact, and seek to meet an emergency—conditions which are the result of our growth and importance as a great organization.—ED. MAGAZINE.]

WHEN MY SHIP COMES HOME.

When my ship comes home o'er the creamy seas,
 With her bending spars to the spanking breeze,
 With her snowy sails swelling out on high,
 Sweeping proudly 'neath an azure sky;
 Oh! I'll sing a song of delightful sound,
 For my heart with joy shall gladly bound,
 When I see her glide o'er the ocean's foam,
 With her cargo rich coming safely home.

She's a noble ship, with as brave a crew
 As e'er sailed out o'er the waters blue.
 She was built for speed, and was launched 'mid
 hopes
 That have clustered 'round her sails and ropes;
 And she outward went when the breeze was fair,
 And the balmy spring time filled the air;
 When life's morning sun of the long gone by
 Sent its slanting rays from a cloudless sky.

Many years have fled since she sailed away;
 Many pulsing hearts have been turned to clay;
 Many limbs grew faint on the tollsome road
 That crowds in search of wealth have strode.
 Many smiling Junes, when the eaks were bland,
 Have been here and gone since she left the land.
 But she's yet afloat with her timbers sound,
 And I'll soon hurrah for the homeward bound.

When the queen of night leads her starry throng
 Through the evening gates of the skies along;
 When the nightingale fills the drowsy air
 With her palpitant notes floating everywhere;
 When the Orient glows, with a lustre bright,
 From the silvery lamps on the brow of night,
 I then to dreamy headlands roam,
 Watching the sea 'till my ship comes home.

"A sail, a sail!" I have oft times heard,
 And my patient heart with the cry was stirr'd,
 But my eyes grew faint as I scanned in vain
 For my tardy bark coming o'er the main.
 I have watched big fleets, with their yards all
 square,

Sailing into port full of treasures rare;
 But I ne'er set eyes on this ship of mine
 Since I sent her off o'er the foamy brine.

I wonder where she has staid so long?
 Are her anchors down near the shores of song?
 Has her crew been snared by the Circe's smiles?
 Or her course been shaped for the enchanted
 isles?

Has the lightning joined with the hurricane
 To engulf my bark in the trackless main?
 Oh! I can't believe that she's yet afloat,
 For the Hopeful Heart is a royal boat.

She shall yet sail in full of every charm
 That her decks can hold to the fore and arm.
 Tho' she left the land in my early teens,
 She is yet afloat, one of ocean's queens;
 And she home-ward glides o'er the moonlit seas,
 As her proud sails thrill with the trembling
 breeze.

With a cargo rare, full of richer gems,
 Than have flashed from queenly diadems.
Shandy Maguire.

ARKANSAS CITY, KANSAS, Sept. 1, 1889.

Editor Firemen's Magazine:

We are flourishing down here in Southern Sunny Kansas. The farmers are thriving and happy, the people are greatly satisfied, and the firemen on our division are the jolliest, best set of fellows that can be found anywhere. Everyone, I think, believes in federation, and also in the change of our name, if it will be a benefit to our Order to do so, and from the small argument brought up against the change I think common sense teaches us that it is a necessity.

Will Ballou has been sick with rheumatism for some time; at last reports he was growing

some better. Little Sam Small went to Baltimore, Md., to get married, and returned with the happiest smiling countenance we ever saw, so the suppositions are that all's well with him. Bingfan says Sam must "spring himself" or the boys will fire him out.

The boys are all quite busy at present and making good time. Oklahoma is growing a little dull, we don't have so many pretty women to flirt with as when the country first opened up.

Several of our members went to Gainesville, Texas, last June to help organize the B. of L. F. Lodge down there, but through some misunderstanding Hannahan failed to be there, and no Lodge was organized until two weeks ago, and let me say right here, that those who visited Gainesville had a grand time, and would thank the firemen for making everything so pleasant for them during their visit there, and we hope to meet them again in the near future.

Jim Maher looks blue. What's the matter, Jim? Frank Rogers will lose his girl if he don't look out.

James Dorn accompanied Bro. Hannahan to Gainesville to organize the Lodge there two weeks ago.

I think the Vice Grand Master's cow is a dandy. Every line is to the point. Let us hear again from "Gibbon." Yours,
Oklahoma Boomer.

NEW HAVEN, CT., Sept. 2, 1889.

Editor Firemen's Magazine:

The last meeting of Elm City Lodge, No. 284, was one long to be remembered. The session was one of the most interesting in the history of the Lodge. A New Haven paper, referring to the meeting, said: "A report of the condition of the Lodge was read for past year. There are ninety-two members in good standing. The Lodge is on a good financial basis. More than \$300 were paid out for sick benefits, each member being entitled to \$7 per week. Two candidates were admitted, and just before the close of the meeting, Brother Pyle was called upon to speak in behalf of the Lodge. During his remarks he presented Past Master Edward A. Ferrill with a handsome gold badge and pin of the Brotherhood. Mr. Ferrill has been and is one of the most earnest workers in the Lodge, and has won by his genial manner the esteem of his brother members, for whose interest he has always most earnestly labored. He fires the express between New York and Springfield for one of the veteran engineers, "Bob" Kellogg. Mr. Ferrill was very much surprised and responded most feelingly. Speeches were made by other Brothers of the Order, when Master Levi Rude invited the members to refreshments, which had already been provided for in the banquet hall. Those present pronounced the meeting to be one of the best the Lodge ever held." A new code of By-Laws has been adopted, and all feel that they will prove beneficial to the Lodge. Our present officers are all good men, and everything promises prosperity for the Lodge.

Fraternally yours, W. A. P.

More About the New Name.

ROCHESTER, N. Y., August 17, 1889.

Editor Firemen's Magazine:

Well, I am around again, like a bad penny. I have a little more to say about the change of name; the readers will have to judge whether there is any sense in what I say or not. I want to know, if we change our name and adopt any of those which have been mentioned, *if it will not concede to all engineers the right to apply for admittance to the Order?* If so, is it not a possibility *that the men who have treated us with scorn and contempt in the past will want to join us when they see that we are gaining power*, and they think that it is to their interest to be with the winning side? You all know that man is a selfish creature at best, and would we not be opening our doors to a class whose sole ambition is the furtherance of their own selfish desires to the exclusion of all honor and principle? Don't you think that we have enough to do to keep down people of our own class, who are actuated by such motives, without having to fight against those who we know, from past experience, have made that their object in life? They might come to us and say that they were not delegates, and did not make the laws of their Order, to which we object. But at the same time we know that they did all in their power to support those laws and the men who enacted them. Now, Mr. Editor and readers, do we want to cut a new doorway in the Lodge-room for the entrance of this class of people? Do you think brotherly love would be on the increase? Don't you think that this action would breed discontent and strife in our midst? If we change the name to suit conditions and facts, as you say, and give the engineers a place in the name of our Brotherhood, we will have to *admit engineers, even those who have never belonged to our Order*. And what will be the result? I think in the near future you would see the same course taken which the conductors took—there would be a new Brotherhood of Locomotive Firemen formed. You see the habit would be so strong in these engineers that it would be impossible for them to refrain from giving us a sly kick once in a while, and that would make things interesting for all concerned. A rose may smell as sweet by any other name, but call it a mouse, where there is a room full of ladies, and what will be the effect? Change our name and it will be a Brotherhood just the same, but will it be as harmonious an affair as it now is? We have to deal with a *disfowler, liar or blackguard once in a while* and expel them from the Order, and that is enough without having to drive other people's pigs from our garden. What engineers we have in the B. of L. E. are men who have proven their worth and remained with us, and other good men and true will do the same. Do the Masons change their name so as to take in all the different classes of mechanics and merchants who belong to their order? Or, in fact, do any of existing societies do it?

Oh, Rip Van Winkle! You profess to be a Brotherhood man and see nothing wrong in the

laws of the B. of L. E. Truly you are a credit to the Order; a whole-souled, far seeing man. We are not bearing too hard on the B. of L. E., Rip. We are not even giving tit for tat. I hope we will never stoop so low as to deal with them as they have dealt with us. You think a man can not attend to more than one society at once. You say your chances of promotion are far off. Well, if you devote your energies to firing alone, you will never see your chance for promotion. Do you think an engineer devotes his mind and time to blowing the whistle and nothing else? I think a man who has not brains enough to attend to more than one thing at a time, or belong to more than one order, had better cease looking for anything more in this life than the pick and shovel.

Well, Mr. Editor, I may not understand this change of name as I ought, and if I do not, I am ready and waiting to be enlightened. I see one of the boys of "99" has awakened, and I am satisfied to let up for awhile, and let him fill the vacancy. I would like to hear from "99" in regard to the change of name. Have you nothing to say, boys?

Bro. Benedict has quit the egg business. Mansfield's time is spent in keeping track of the girls along the L. P. & C. I don't know, and don't mean to say, but I have heard that Roth asked J. F. B. to change off with Daggett so he could go to A. D. and see the girl. Oh, Charlie Rochester, don't stir Inman up unless you want to spread death and destruction along the B. R. & P. Julius Cooper is in the last stages now, and we don't want any more of the boys talked to death. Say! what sights one will see. There is Julius going along with a grindstone on his shoulder. Inman says he has an axe to grind. And there is Luttringer with his green tin box under his arm. Inman is the nearest to perpetual motion we have ever seen. Daggett, I would like to give you a shot, but I will spare you this time. Alsworth is in misery. He has to fire the "49" once in a while. They, Hess and Luttringer, are a good illustration of the long and short of it. Benedict is stuck on the passenger business.

Well, I am done for awhile. Won't some one in "99" fill my place. I know there are some of "99" who will remember *One of Them*.

[Let it be understood, that objections are not arguments. What is wanted, in discussing the new name question, is cogent reasoning. An objection that cannot be established and fortified by reason is not worth considering. "One of Them," in the foregoing communication says, "I want to know if we change our name, and adopt any of those which have been mentioned, if it will not concede to all engineers the right to apply for admittance to our Order?" "One of Them" ought to know that all engineers have the right to apply for admission "to the Order" now. In saying this, we dispose of all that "One of Them" writes in that connection. "One of Them" is exercised over the question of "harmony

nious" relations. He says, "we have to deal with a defaulter, liar or blackguard once in a while, and expel them from the Order," and intimates that a new name would increase that sort of cattle. The B. of L. F. has its laws relating to receiving members. It would have only gentlemen—good men—but, like all other human institutions, in spite of laws, it receives into its embrace defaulters, liars, blackguards, men who are at heart spies and traitors. Men morally and mentally deformed. Christ Himself, in selecting his twelve apostles, had one who betrayed Him. The B. of L. F. cannot escape from such vagabonds. Lodges have been wrecked by them, and they have given the Order infinite trouble. But it has been faithful to its motto and to its principles. It has weeded out the scoundrels as fast as it has found them out. Now, what of all this toil, this exasperating vexation? We have a large body of good men, tried and true. The Order educates them in all things of good report. They advance in their calling, become engineers, and then the B. of L. E. stands ready, by various arts and schemes, to induce them to abandon the B. of L. F. This done, the B. of L. F. can go forward and educate more men to swell the ranks of the B. of L. E. Is that the mission of our Order? Has it no higher aim and ambition? We think it has. The suggestion of a change in the name has the one prudent purpose in view—that of giving the Order a name in strict consonance with the vocation of its membership—some are firemen, some hostlers, some engineers, and all are Enginemen—all are men of the Footboard. A change of name proposes simply to call ourselves what we really are. Neither wrong nor injustice is possible by pursuing such a course, and level-headed men ought to see the point.—**ED. MAGAZINE.**

The New Name.

POCATELLO, IDAHO, August 10, 1889.

MR. EDITOR:—The discussion in regard to a new name, has certainly reached an interesting point. The opposing forces have boldly swung into line in the August issue of the *Magazine*, and in so doing, the B. of L. F. has, in my opinion, exposed among her membership some of the benighted ignorance that is forever standing in the way of progress, and has been in all ages, and will continue to be the curse of organized labor—the rock which has foundered so many nobly planned efforts for the emancipation of labor.

Why this continual bowl? "Wait until after the Denver convention." What has that to do with us? Nothing whatever. We, as free citizens, as workers, as men of intelligence are in duty bound to push ahead in the interest of right, justice, and self-protection, and make such laws and changes as the ever-changing conditions of our great Brotherhood require. Men *inside* of our

Brotherhood and *outside* of lunatic asylums say "Let well enough alone."

On the cover of our *Magazine*, in a very appropriate place, is inscribed the word "Progress," and with their eyes on that word, writers for the *Magazine* call a halt, and say, "Let well enough alone," cease to push upward and onward, but drive from our ranks thousands of good men, tried and true, and maintain forever our past position of absolute dependence on the assistance of others in time of war. What models of cowardice those men must be. To what conditions of slavery must they be compelled to submit, that they neither hope for nor ask for the dawn of a brighter day? How they must love the Brotherhood, that they would have it continue to be a breeding pen for something better, rather than an Order to take men in their childhood, educate them to be proficient in their calling, train them to a higher and nobler manhood, be to them and their families a shield and protector for all time, or while they continue loyal and true.

True there is a proud halo of glory surrounding the dear old name, and none of us will ever love it the less because we leave it behind. When we become men we put away childish things, but rarely indeed do we despise or feel ashamed of those things that have been our joy in earlier days. We tenderly lay them aside, and as becomes men, meet and overcome new difficulties and circumstances as they arise before us.

Those firemen, members of the Knights of Labor, who were rejected by "Rip Van Winkle" and others of his stamp, on the grounds stated in his article in the August *Magazine*, have my sincere congratulations on their narrow escape from the contaminating influence of such associations.

Frank Walton.

[We are satisfied that the great body of the membership of our Order favor the change of its name. Here and there an objection is made, but such objections are few, and as a general proposition, were made at a time when the importance of the change was not fully comprehended. It is not to be supposed that every member of the Brotherhood will favor the change. The present is not the age of miracles, but a vast majority, we are satisfied, do favor the change. There are some men who are never more delighted than when astride of the shirt tail of progress yelling "Whoa." That the Brotherhood of Locomotive Firemen should have its share of such infirmities is not a matter of surprise, that its share is insignificant is a matter for felicitation.—**ED. MAGAZINE.**]

SANTA ROSA, CAL., August 22, 1889.

MR. EDITOR:—As a friend of the B. of L. F. I wish to suggest that the new name of the Order be "Brotherhood of Locomotive Operators." This would convey the proper meaning and would not conflict with the name or initials of any other order.

Respectfully,

A. T. B.

For the Magazine:

SAD TIDINGS.

(Dedicated to the Memory of Ward Davis, of Red River Lodge, No. 8.)

Again and again comes the sorrowful word
Of a home made sad and fond hearts broken;
And we stand with fear when the step is heard,
And our hearts beat fast as the words are spoken
The kind and warm-hearted,
Forever departed,
O, why did he go from his children and wife?
But, true to his duty,
He fell on the beauty
Of glorious manhood, of promising life.

And now, as I think of the father who went
To his work, I see him fondly pressing
The tenderest kiss, as he kindly bent
O'er the wife and child he was there caressing.
Though simple his story,
There lingers a glory,
A halo of splendor hangs over the name
Of him who has perished
For those whom he cherished
More dearly, more sacred than honor or fame.

Though deep are our feelings, they cannot supply
The consoling balm of a father's kindness;
Or the "passing tribute of a sigh,"—
Can it bring relief for the fearful blindness?
While tear-drops are glistening,
The soul is but listening,
And longs for "the sound of a voice that is still."
The heart, in its yearning,
Is throbbing and burning,
But what can this great, aching void ever fill?

And thus to the memory of him who has gone
From a home now filled with pain and sorrow;
To a brighter realm, where a glorious dawn
Will break on the bright and glad to-morrow,
With kindest devotion,
And heart-felt emotion,
With the honored and faithful, his name we enroll
And hoping to meet him,
Endeavor to greet him
In a sunnier clime, the home of the soul.

STANBERRY, Mo.

George W. Hall.

Kind Words and Good Suggestions.

DANVILLE, ILL., Sept. 5, 1889.

Editor *Firemen's Magazine*:

Did you ever in starting to write an article for the *Magazine*, that is an article, the subject of which you had so many good things to say, and sometimes find it hard to get started? If so, you can sympathize to some extent with me. Many things have I to speak about and the first is the *Magazine*. It must be gratifying indeed to the Brothers to have such a champion of their cause. The steady improvement which is noticeable in every number, is but the outcome of the wisdom displayed by our able editor, not only in his choice of subjects but in the manner in which he has discussed the same. This is particularly visible with regard to the labor troubles in Pennsylvania which have been discussed but lately. How few of us realized to a full extent the aspect of things in that State? How would we have known about any investigation at the hands of a Congressional Committee and whether it was favorable to our cause or otherwise? Now, brothers, if you are enthusiastic in

your endeavors for the good of our Order don't you think that one of the best ways to get posted in the work which it has mapped out would be to read carefully and thoughtfully the articles in the *Magazine*? The *Magazine* should be to us what the newspaper of pronounced politics is to the politician; it should be our cyclopædia to refer to for proper authentication of any subject pertaining to the good of the cause of labor.

In speaking of the *Firemen's Magazine*, we should not think that because of its name it is meant that it is published only for the firemen or members of the Order to read. We should get it into the hands of the great mass of thinking people, and people whose lives are given up to doing good for their fellow-men; the only way to do this, would be for each member to turn himself a sort of assistant to the *Magazine* Agent of his Lodge.

Mr. Editor, there is one thing that I cannot see through, and that is why do some of the members stay from meetings and allow just a few to meet and transact business? That this is true, no one can deny. You will find it so in every Lodge in the Order, at least it is so in No. 63. It looks as though a person who has so much at stake as a member of a Lodge of the B. of L. F., would not begrudge two or three hours every month, to see how his Lodge is getting along. I notice in all, or most all I should say of the communications from the Lodges, that the writers always have something to say of the Lodge which he represents, and I will not be left out in the cold.

Hercules Lodge, No. 63, is still on deck, and is growing both in numbers and into the hearts of the boys. We have a few who don't think the old flag good enough to fight under and they are leaving as fast as they can get cards, but who can blame them? a man who has not been inside of a Lodge room once in a year can't expect to know how much he has left or how poor a change he has made. Some day they will know to their cost. Well, there is no use of crying over spilt milk, and the brothers of 63 can well appreciate the old saying, "good riddance of bad rubbish," especially when the milk which is spilt is sour milk and is not cream; we still have the cream.

With kind wishes for the B. of L. F., I remain,
Fraternally,
C. G. B.

[It is scarcely necessary for us to say that we appreciate the kind words of Bro. C. G. B. His suggestion, that each member of the Order turn himself into a sort of assistant to the *Magazine* agent of his Lodge, is wise and timely, and we hope the membership will act upon it. Subscribers could be obtained by the thousands if every Brotherhood Fireman would assist the agent in the good work. Some of our agents, are inert and do little or nothing, others are active and efficient. Why not all take hold and aid in making the *Magazine* more valuable to the Order?—ED. MAGAZINE.]

Give Us a Rest.

MOXTON, N. B., August 18, 1889.

MR. EDITOR:—Kindly allow me the space to give my sentiments on a matter on which I have hitherto been silent. I refer to the much talked over and hackneyed dispute with the B. of L. E. I think it is about time the members of the B. of L. F. took a tumble to themselves and shut up about the old worn out theme. Two wrongs will never make a right, and if the B. of L. E. have used us wrong in times gone past, it does not behoove us to use them wrong now. When I say this, I mean for the best interest of the B. of L. F. Some of the letters that appear, from month to month, filled with sarcasm and abuse, don't do any good, but put our Order in the position of the fox and the grapes. Now such is lowering to the dignity of our Order, and is playing into the hands of our enemies; the enemies of organized labor. Nothing can be more pleasing to a Stone, a Perkins, or a Bonzano, than to see the two great locomotive brotherhoods at war and wrangling; in truth, the wrangling all comes from our side and what are we wrangling about anyway? Because the B. of L. E. would not change laws which are obnoxious to us and because they won't federate. Now these laws have been on their books several years and what great harm have they done us? We have gone right on, *growing* and improving our Order. Some few have withdrawn and joined the B. of L. E., but the great majority of our members who have been promoted, have stayed with us and are going to stay. Now, all who write against the policy of the B. of L. E., agree that their policy is more hurtful to them than to us. Now, if this is the case, why, let them go and don't forever be chewing the rag, over what is not hurting us. As for their policy in regard to federation, why not let them alone on this point too, if they don't choose to federate now, it need not deter us from reaping the benefits of federation. Our brothers may talk as they like about paying the engineers off in their own coin. Well, this won't do. If the enemies of organized labor thought they could be sure of the firemen maintaining a position of strict neutrality, they would quickly open the ball, by a row with the B. of L. E. Suppose the engineers on a system should strike, the road supplies their places with O. R. C. men and other scabs picked up around the country, and what a spectacle it would afford, the B. of L. F. observing a course of strict neutrality, that would be, our members firing for scab engineers, and such of our members as were runners remaining at their posts and the brakemen and switchmen by virtue of the act of Federation doing the same, and thus defeating the aims of organized labor. Of course, such a thing I don't believe ever could happen while the great majority of the B. of L. F. is composed of the membership it now has, but I write this to show with what thoughtless inconsistency some of our brothers write in the columns of the *Magazine*. The utterances of the *Magazine* are taken for the sentiment of the Order it represents.

Now, in one part of an issue can be found a letter filled with abuse of the B. of L. E., and threatening them with dire punishment in the future, and in another part is found an article showing up some of the contemptuous proceedings of the heads of the O. R. C. So, therefore if our *Magazine* would adopt the plan of the *B. of L. E. Journal*, and suppress all abusive letters, and publish what is for the good of the B. of L. F., it would be a more dignified course, much more consistent with our standing to-day in the labor organizations of the country. A writer in the August number of the *Magazine*, signing himself S. W., speaks in a very sensible manner when he says he moves we drop this rag chewing and go on with our great duty of building up our institution on its own merits. There is not a member in our Order but what has friends in the Engineers, and what good can be done by making enemies of them; nothing but to defeat our own aims will be the result. I verily believe, that some of the letters that have been published in the *Magazine* are nothing more than the work of some sore-heads who wanted to have a slap at some particular engineer, and who had the unbounded gall to make the *Magazine* of our Order his weapon to strike with, and therefore make the B. of L. F. responsible for his spiteful utterances. This is why I say it would be for the benefit of the Order and its official organ if such writings were suppressed. Now, brothers, think over this, and try and arrive at the conclusion to give us a rest and every brother put his shoulder to the wheel of our own Order and help it along on the road to success. Let every member attend the meetings of his Lodge, keep his dues square and be able to vote intelligently on the questions that may come up concerning our Order. Work, work, work, for the B. of L. F. There are many ways in which every member of our Order can work, and every working member's effort is felt no matter how little he does, it helps and if every member would do his duty to the Order there will be no need to care whether our sentiments are entered into by the B. of L. E. or not. We will get there ourselves and the honor will all be ours.

Yours fraternally,

Pop.

[The foregoing communication demands some words from us. The time has come for frankness of expression. "Pop" invites it and "Pop" shall have it, as also all other "Pops," who while advising others to "take a tumble to themselves and shut up," take a "tumble" to themselves and open. "Pop" is one of those unfortunately constituted persons, who *opens* to plead the cause of those, who in season and out of season, by methods open and covert, seek the downfall of an organization they affect to love and cherish. Does it answer the purpose to say "they are built that way?" To say that, is to say they are objects of pity or contempt, as one may be affected by their mouthings. Such men as "Pop" are for-

ever bending, cringing, fawning and making excuses for the excoriations they receive—they kiss the rod that smites them. They seem to take delight in counting their stripes and apologize for the men who inflict them.

Their estimate of the mission of the Brotherhood of Locomotive Firemen, is, that, as has been well said, it shall forever be a "breeding-pen" for another organization, and that men who have the nerve, the pluck, the sand, the independence to expose wrongs and resist them should "tumble and shut up." The idea seems to be that they should be "tumble" burs, roll their little balls, containing the germ of another "tumble" bug, and be silent. "Pop" admits that a wrong has been done the Brotherhood of Locomotive Firemen, he admits that the wrong has not been redressed, that it remains in all of its haggard proportions, and with the fact in full view "Pop" expresses the opinion that to continue to antagonize the wrong, in itself constitutes a wrong, and that the right thing to do, is to play the role of lickspittle, and in silence and degradation submit to the wrong. "Pop's" idea is that Stone and Perkins, Bonzano and the rest of the subjugating autocrats, take courage, when they see a labor organization, exhibiting eternal hostility to degrading methods. In this "Pop" is all wrong. Such autocrats, are in sympathy with "Pop's" theory. They want the men whom they degrade, or whom others degrade, to "tumble to themselves and shut up"; and "Pop" in advocating silence and servitude assumes that he is advocating the best interests of the B. of L. F. He has diagnosed the condition of the B. of L. F., and is of the opinion that under the blistering and bleeding treatment it has received, it "has gone right along growing and improving."

"In this "Pop" shows his ignorance. The membership of the Order is less than it was two years ago, less than it was one year ago, while the Order that has used the B. of L. F. as a "breeding-pen" is growing in membership.

It is well known, that in many ways an engineer, a member of the B. of L. F., is embarrassed, bulldozed, intimidated, for the purpose of compelling him to abandon the B. of L. F. We have the facts. We know whereof we speak. The *Magazine's* mission, is not to advocate making the Brotherhood a recruiting camp for the B. of L. E. Its mission is not to condone flagrant wrongs and premeditated insults. On the contrary, its high ambition is to make the B. of L. F. self-respectful and independent.

"Pop" says the great majority of our members who have been promoted have "stayed with us and are going to stay."

This is not so. Nine out of ten abandon us and join the B. of L. E., and the stream is steadily flowing in that direction. Who has not been humiliated to know that men on the floor of conventions, who asseverated, with air-sawing gesticulations, that they were going to stay with their parent Order, in a few months subsequently, abandoned us. Many of them going because made the victims of schemes as outrageous as ever gave infinite infamy to the Corbins of the period. True, there are among the number, men who never drew a loyal breath for the Order that nursed and warmed them into life. Such mentally and morally deformed creatures are found in all organizations, but thousands of them go, because they learn that to remain is fruitful only of ceaseless embarrassments likely to involve them in trouble, from which there is no escape.

"Pop" would have the *Magazine* adopt the policy of the *B. of L. E. Journal* and "suppress" all allusions to wrongs inflicted. The *B. of L. E. Journal*, has never had occasion to print a word setting forth any wrong the B. of L. F. has inflicted upon the B. of L. E. Hence its silence. Nor need it speak while the B. of L. F. has its "Pops" to plead its cause. Tom Moore sung an appropriate prayer when he wrote

"O, for a prayer to curse the slave
When treason like a deadly blight
Comes o'er the councils of the brave
To blast them in their hour of right."

—ED. MAGAZINE.]

BIG SPRINGS, TEXAS, August 23, 1889.

Editor Locomotive Firemen's Magazine:

In answer to your call in August *Magazine*, for the boys to give their experience in firing on their Divisions, I have this to say, that firing a locomotive on the Texas & Pacific Railroad is anything but easy work. West of Fort Worth there are five Divisions. The first is 140 miles, the second, 130 miles, the third 154 miles, the fourth, 100 miles, and the fifth 90 miles. All of them are hilly. On the first Division they have ten-wheelers 17x24. The boys get Atoka coal out of Fort Worth. We call it good coal, but going east they get bad coal, called "strawn" or more commonly, "Johnny Gordon." It forms clinkers and fills up very badly—so the boys have to clean one and two fires over the division. They burn, on an average, from fifteen to sixteen tons on a round trip. Upon the next two divisions, the work is harder on account of all bad coal and which makes the engines leak. Most of the flues of the engines leak badly. The firemen are required to clean from one to three fires over a division, and clean an ash-pan at every stop, on account of having to shake the grates so frequently.

The engineers help us to clean fires. We have a good class of engineers here. The coal, for soft coal, is very hard, and is full of stones, slate,

Iron and God only knows what else. We get the coal in lumps, and if we do not get it in lumps, we get all dirt. The lumps are hard to crack. Considering the work of firing, it will be seen that it is very difficult for us to keep our eyes upon every sign of danger. We burn from fourteen to eighteen tons of coal on a round trip—some of the engines not so much. But it is not now as bad as it used to be four or five years ago. Then the coal was still more inferior and the track in bad condition, and the boys had to clean from six to nine fires over the division, and sometimes clean one or two fires standing on the siding, waiting to meet a train so as to keep the engine alive. The fellows who wanted to make the firemen responsible for all dangers, with engineers, did not know much about what some firemen have to contend with. It would pay these professors to look over their noses once in a while, and not make such asses of themselves.

The boys here are greatly delighted at the way you gave it to Corbin and Bonzano and Wheaton—three nice reptiles. Along with Pigott, Le Caron and Balfour, the devil will have a nice bunch. It will make h—l hot when they die.

I hope the boys East will find their work easier when they read this letter. The boys of Signal Mount Lodge, No. 172, are doing well, with the exception of a few whose engines are in the shop. They may blow down East about the run their Strong engine makes. We have engines on this road which have made their trip of 614 miles, with six, seven and eight coaches, four of them Pullman sleepers, and the boys had to clean plenty of fires on the way.

Is marriage a failure? It don't look that way down here, for the simple reason that Bro Bible and wife were blessed about three months ago with a fine baby boy. Al o Bro. Smith and wife with a little girl. How George did cut up because it was not a boy; he bit his finger nails for a week though his first was a fine boy. God bless them all. Brother Sam Hunter and wife were blessed yesterday with a fine big boy. Sam "set them up" for the boys, and one of them said "Sam don't get full" and Sam replied, "W-h-a t! don't get full and it a boy." Papa feels happy and we don't blame him. For a small town, Big Springs takes the cake. The old and the young prove that marriage is no failure down here. There are more little angels flying around here than one can count. It must be on account of the rain we have had this season for it is always very dry out here. The boys are always glad to hear from the ladies, their letters are always nice and instructive. God bless them, for our wives and sisters get a great many new ideas.

We are very proud of the federation of brakemen, switchmen and firemen. I hope to see the rest come in. If they are wise they will. Men who get the big head don't know much of this world. If they only knew how men of capital look down on them, they would be ashamed to raise their eyes, and look an honest American in

the face. The spotter is active on the T. P. Railway. Another tool, when worn a little, will be cast aside to the scrap heap.

We have a good Master Mechanic here, A. S. Douglas is the firemen's friend; also two good firemen, Owen Clark and J. Jenkins. Wishing the B. of L. F. a God speed I remain,

Yours truly,

Jack.

PUEBLO, COLO., August 12, 1889.

Editor Firemen's Magazine:

I see a reply in the *Magazine* by "I. No U." to ex engineer, "Set Back." Now we will find out something. In the first place, "I. No U." says that I contradict myself. We will see. I say Lodge No. 59 is very inactive, which I will prove. Brother M. C. Donnelly, Receiver of Lodge No. 59, told me that in the past two years he had handled quite \$7,000, and no one had ever looked at the books, and that he had requested No. 59 to look at the books. Now if that don't show inactiveness on the part of No. 59, I should like to know what it does show? There are some firemen that are as mean and contemptible as there are engineers. I will defy "I. No U." or any one else to bring anything against me as a gentleman or as a member of the Brotherhood of Locomotive Firemen, of which I have been a member over five years. "I. No U." knows that strict attention to business, sobriety, industry and honorable and upright action are the required traits in a fireman's character to secure him promotion here, and he knows that firemen have been expelled from the B. of L. F. for defrauding, and that others who have never fired on a time card have been promoted over competent firemen. I would ask "I. No U." if firing six years for two engineers without one word of complaint does not show attention to business? "I. No U." is mistaken in the amount that the "Ladies' man" got away with; it was \$130 instead of \$86. Modest man! I count no favors nor ask any favors. All I ask is equal rights and justice to all, which wrongs no man.

Fraternally yours,

Set Back.

PITTSBURG, PA., August 20, 1889.

MR. EDITOR: In order to promote the wellfare of Federation, the following Lodges of Pittsburgh and Allegheny cities: Nos. 219, 235, 302, 318, 378, B. of L. F., Nos. 106, 179, 225, 244, B. of R. R. B. and No. 62, S. M. A. A. will hold their first union meeting on September 30th and October 1st. A secret session will be held on both days at 1 P. M., a public meeting at 7:30 P. M. on September 30th, and a grand ball on October 1st at S. P. M. Imperial Hall on new Grand street has been secured for the occasion. The Grand Officers of the respective Orders will be present. Indications show that the brothers are bound to make the affair a grand success and much good will be accomplished. Hoping that our neighboring sister Lodges will be well represented I remain,

F. G. Thomas,
Chairman.

DON'T YOU FORGET IT.

MR. EDITOR:—As sure as God made the spheres;
As sure as cruelty brings tears;
As sure as God is just,
The working man must burst the trust, and
Don't You Forget It!

MR. EDITOR:—As sure as water will run down
hill;
As sure as battles maim and kill;
As sure as Spartans fought at Thermopylae;
Workmen must set down on monopoly,
And Don't You Forget It!

MR. EDITOR:—As sure as hot water makes steam;
As sure as milk produces cream;
As sure as Christians are taught to pray,
Workmen must have fair play, and
Don't You Forget It!

MR. EDITOR:—As sure as the rainbow spans a
cloud;
Sure as death demands a shroud;
Sure as capitalistic gangs sharpen hunger's
pangs,
Workmen who meditate will federate,
And Don't You Forget It!

Solon.

A New Name.

ELMIRA, August 20, 1889.

MR. EDITOR:—In reading my *Magazine* for August, I notice the discussion on the above subject continues.

To those of you who favor a new name, I would ask what do you seek to accomplish by adopting a new name? You claim it is to suit conditions to facts.

One of these facts is that we have about 5,000 engineers in our Brotherhood, you wish a name to suit them and keep them in our Brotherhood.

In the next five years it is fair to presume, there will be about 5,000 more firemen promoted and of course we will keep them in our Brotherhood. I would ask, what then is to become of the B. of L. E.?

Some have stated that this matter does not refer to the B. of L. E. at all. That we have nothing to do with them, that they are not to be thought of. On the other hand you wish to work in harmony with all labor organizations and do what you can to assist them, and in the same breath you strive to thrust a lance into the very heart of that organization which has done more to raise wages and keep them to a high standard, than any other labor organization.

To make it plain, you would cut off the supply of the B. of L. E. and claim that it did not concern them, and that they were not to be thought of.

The motto of the three federated bodies, B. of L. F., B. of R. B., and S. M. A. A., is Mutual Justice. A grand and noble motto. We seek Mutual Justice. Should we fail to do justice to others? Are we doing justice to the B. of L. E., by cutting off their supply? Is it consistent for any labor organization to tread on the toes of another? Can we afford to do anything that will lead to trouble between the B. of L. F., and the B. of L. E.

You claim a right to suit conditions to facts. In the east it is now customary on many roads

to promote brakemen to the position of firemen. To suit conditions to facts would it not be proper for the B. of R. B., to change its name B. of R. B., and Firemen. One would be as near right as the other, but I claim that both are far from anything that will elevate any class of railroad men or accomplish the plan of Federation which is so necessary to meet emergencies. We cannot afford to do anything that will cause antagonism on the part of any labor organization.

As an example of the results accomplished by that kind of work, you have only to look at the condition of the men on the P. and R. who have been so ably shown up by our *Magazine*.

The letter in our *Magazine* written by C. S. Wheaton and so ably expounded upon by our Editor is evidence of the fact that we should prefer peace and harmony, to discord and dissatisfaction.

To G. H. Tucker I would say that I consider it far better when we have a good name, one that is looked up to, one that has stood for sixteen years, to "let it alone" in preference to adopting one that gives evidence of causing plenty of trouble between men who are working together and who should work for each other,

Yours Fraternally,

Let Well Enough Alone.

[The forgoing communication is worthy of note in this, that it is a straight out plea for making the Brotherhood of Locomotive Firemen a "breeding pen"—a "recruiting camp" for the B. of L. E. It is the first instance that has come under our notice, where a Brotherhood Fireman, advocates the depletion of the B. of L. F., for the purpose of building up the B. of L. E. The writer says: The B. of L. F., already has 5,000 engineers in its ranks; that in the next five years, it will have 5,000 more, and then, in holy horror, lifts his eyes and hands heavenward, and exclaims, "What, then, is to become of the B. of L. E.?" Possibly, the B. of L. E. would say, "We recognize the B. of L. F. as composed of men, in all regards the equals of the members of the B. of L. E." Possibly the B. of L. E. would say that "belonging to the B. of L. F. does not constitute him a degraded, contaminated being, unworthy of membership in our Order until he has washed himself of the defilements incident to membership in the B. of L. F." As the case now stands, no member of the B. of L. F. can enter the B. of L. E. The B. of L. E. virtually says, "get rid of your leprosy, wash off your B. of L. F. nastiness. Sponge yourself of B. of L. F. dirt. Be a man—a gentleman; disown your Brotherhood, play traitor to obligations; turn your back upon your old associates; forget that you were ever firemen—and we will let you in." And this is called "well enough," and the writer signs himself, "Let well enough alone." If that is well enough, what, in the name of all the gods at once, would be bad enough? Under the old *regime*, a member

of the B. of L. F. could join the B. of L. E. without purging himself of any real or supposed odium consequent upon having been a Locomotive Fireman. He was accepted by virtue of his manhood, his skill, his respectability, his personal and moral worth. That was well enough. Did the B. of L. E. let well enough alone? No. It said, "If you remain a member of the B. of L. F. you shall never represent your Division in a convention of our Order." That was bad enough, humiliating enough, debasing and degrading enough, but there was more in store for Firemen. They were then told they could not become members unless they abandoned the B. of L. F. And this climax of insult is called "well enough" and something that ought to be let alone. And the men who are standing by their parent Brotherhood, pleading for it, resisting defamation and insult, are classed by such Brotherhood Firemen as "Let Well Enough Alone," as those who are antagonizing the welfare of the Order. Such estimates of the Brotherhood are not calculated to promote its standing in the estimation of men of brains.—[ED. MAGAZINE.]

Timely Reflections.

ABERDEEN, S. D., August 15, 1880.

MR. EDITOR:—The object of the Brotherhood of Locomotive Firemen is to maintain our rights, to protect ourselves and families, and care for them in sickness and death. The *Magazine* is published so we each may know our condition and position as working men. If any corporation, organization, or individual impose upon or injures us this same *Magazine* is the proper place to make a good, loud, distinct roar. One Brother in the August issue of this *Magazine* thinks we "have chewed the rag long enough." As I understand it, resenting insult and injury is what our worthy Brother defines as "rag chewing," which is our duty to do as well as a privilege. If any corporation tries to grind us under their heel of injustice (like the coal miners of Braidwood, Ill.) let us buckle on our armor and stand firm for our rights as free born American citizens and laboring men. If any organization insults or injures us, let us let them know that we are aware of the fact. If any individual (i. e., C. S. Wheaton) cooperate with any corporation to injure us, let us be on the alert for such enemies, for they strike when we least expect them.

I judge from past experience that our worthy Editor is capable of chewing the whole of the rag himself; but if he finds more of the indigestible article laying around the Grand office than he can masticate thoroughly, I hope he will send one end of it out here to Hub City Lodge, No. 380; we have metal here in the form of Locomotive Firemen who are hungry for a goodly amount of this same old "rag."

In regard to federation—that we need, that we have, and that we must maintain. If the engi-

neers do not want to come with us, let them stay away; they will find no string attached to them, from this vicinity at least. We have proved in the past that we could care for ourselves, and have every reason to believe that we can do so in the future. We ought to have a new name for our Order; it will make us none the weaker, and possibly will make us stronger.

The grand old ship, B. of L. F., has weathered many a hard storm, and I see no reason why a new name painted on her side in large gilt letters will make her less sea worthy; at least, it will represent what we are, and the name we now have does not. I think that Brotherhood of Locomotive Men just the cork to fit this bottle.

Hub City Lodge, No. 380, is only two months old, with only fifteen (15) members. We are trying to make up in quality what we lack in quantity. A number of our members are engineers, and we hope to keep them.

Well, Brothers, writing this article has disabled the right side, and the left side has stopped on the center; rather than get a pinch-bar I will stay right here until the next issue of the *Magazine*.
Hub City.

[The foregoing communication is written in the right spirit, and the writer comprehends the situation fully. The *Magazine* has sought, as its pages show, to live in the peace of equality with all organizations of workmen. To accept peace at the price of insult and degrading conditions is not the mission of the *Magazine*. It stands for manhood, independence, self-respect, fair play and honorable treatment. The Brotherhood of Locomotive Firemen has proven itself honorable in all matters, and the *Magazine* champions its rights and interests always. And there are thousands of men standing by it and aiding it in its good work. *Chevalier sans peur et sans reproche*. Their generous words means victory with honor.—ED. MAGAZINE.]

MACON, GA., Sept. 1, 1880.

Editor Firemen's Magazine:

As I hear it daily discussed, and as I see so many publications regarding changing the name of the Brotherhood of Locomotive Firemen to Brotherhood of Locomotive Enginemen, I desire to say, I am a fireman, employed on the Central Railroad & Banking Company, of Georgia, and I must say, from daily experience, while I do not admire the name of a big E. instead of the original F., from which the greater portion of our honest and true Enginemen sprang, but for the protection of our fellow-men, whom we are in duty bound to protect, I find we will be obliged to change the name of the Brotherhood of Locomotive Firemen to the Brotherhood of Locomotive Enginemen, though we may wait again, without further discussing the matter, and see if the B. of L. E. will change their laws at their next convention, so that when, like honest men, they meet a B. of L. F. man they

can say, "You are my companion and I am your friend." The question often arises why the Engineers do not work in conjunction with the Firemen? That is easily answered. Nine times out of ten, the man, after being promoted, say six months, believes he is one thousand percent. above the Fireman, and in such cases, nine times out of ten, he is not as good as the Fireman. This can be proven by the noblest men of America. I do not say this because I see so many publications, but it is a fact. The Brotherhood of Locomotive Firemen's Order was organized for protection of its fellow members against any injustice, and charity is also known in our Order. Have the above principles not been carried out by its members? It is not in my knowledge, but I will say, if a B. of L. F. man comes South, and especially at Macon, and does not receive all the courtesies of the Order, it is because he does not make himself known. There have been a great many brothers here looking for situations, and I am satisfied they will guarantee that we have good Brotherhood men in the South. But, on the other hand, can we say the same is done by the engineers of this country when they find their brothers looking for employment? I shall say that I have never heard of it here or anywhere else. But I only hope they do, for I am a great friend to the engineers, but I do not admire so much prejudice being used toward the firemen at large. For what purpose is this done? Because some men have made application for employment in other departments and could not find a position, he then says he is a fireman, and without recommendation, he is given a job, and if a train is delayed on account of steam, or other causes, not only the engineers, but other officials, will, and have said, "That is a fine B. of L. F. man." But how many times can we say that we have fired for men who were incompetent, and who were representatives of an Order, and not the Firemen's. Who is responsible for such men? Can the Brotherhood of Locomotive Firemen bear the blame for all? I desire to say from knowledge, where there are so many blames attached to firemen, ninety nine times out of a hundred, it was not the Brotherhood Fireman that was at fault. Still the B. of L. F. must be responsible for that man in the eyes of the public. Again, the question will be asked, "How do the firemen know that the engineers are not their friends?" This needs no reply. We take one instance alone, and without close inspection we can see it. See the form of federation that was made and adopted by the firemen at their convention, which was held in Atlanta, September 10, 1888, and which was kindly presented and explained to them for adoption or rejection, and which was rejected at their convention held at Richmond in 1888. Why? Because the laws were drawn up by such an honorable body of men, that we are not considered their equals. Nevertheless, had the laws been drawn up by some non-Interested men, or had they been so they could have been amended by that body of engineers who met at Richmond, they would have been accepted.

Brothers, we have a membership of fifty in Macon Lodge, No. 246. In the last six months we have had ten withdrawals to join the B. of L. E., and we have ten more that are eligible to membership if they desire to go, and there is no doubt but they will go soon. We average making at least fifteen men a year for the B. of L. E. from Lodge 243. If four hundred and two Lodges of the B. of L. F. can do as well as we can for them, of which there is no doubt, can we not soon make the B. of L. E. the supreme Order of the United States? But is it a benefit to the B. of L. F.? If so, I cannot see it. Now why should we not make our laws so we could cover both engineer and firemen, and if the engineers still claim to be independent of the world, and their membership decreases, and our honest members wish to stay at home with us, the B. of L. E. can get a full supply of expelled members from the B. of L. F., as the necessity demands.

Do not think I wish to make hard feelings with any one, I only speak from present information, and have no objections to the continuation of the discussion.

Windy Jim of Georgia.

SOMERVILLE, MASS., August 31, 1889.

MR. EDITOR:—I would like to ask the brethren and others that write in the strain of "if thy enemy smite thee on one cheek turn thou the other unto him," what they mean? What has been done at San Francisco, New Orleans and Richmond has gone by. In each of these places we have been insulted by that same lofty arrogance that caused the colonists of 1775 to rebel against the studied insults and calumny of George III. Are we not of the same stuff as our forefathers? Has all the pride of true manhood departed from us? Is there no good in us? Are we members of this Order to back it up and resent the insults given to our able officers and our noble Order? For shame to you who can forget so easily! I am not made of such stuff. I may forgive to some extent, but forget, NEVER! I have some of "Old Adam" in me yet. Do you realize, you who want to wait, that this P. & R. affair is but the outcome of the policy of an order that makes a business of going through this life antagonizing every line of organized labor. If the K. of L. men on the P. & R. were left alone and had but the P. & R. to fight they would have been there to-day, and Corbin would not have dared to issue the order to the men to leave their Orders. But now the B. of L. E. is getting it in the neck and have not the backbone to resent it in any manner, and through their lack of sand are showing to the men what they are made of, and how they are backed up. See the example set the firemen and other branches of organized labor by their action, and this is the order we are to wait and see what it will do for us. Rats! It's a wonder you do not get someone to walk all over you and wipe their feet on your mustache. What in the name of common sense do we care what they do at Denver, or anywhere else? There is one thing they can't

do, and that is, remove the feeling of insult that every true member of our Order feels that has a spark of manhood about him. Their order is good enough for them without federating, is it? Well, what are they joining their old enemy for, the K. of L.? Yes, you wait until the Denver Mutual Admiration Society meets, and you'll have an influx into our Order that will surprise you, and it won't be green firemen, either. Who will tell me to hold my tongue now? Who will do up the B. of L. F.? We don't hear quite so much of that since Charlie Trenholm took command of the Steam Railroad Men's Protective Union. If there is to be any doing up and the B. of L. F. or B. of R. B. are in it, my friends you'll find the Union men at their back, and don't forget it. You'll do nobody up but yourselves, and you are perfectly able and capable of doing it without advice, only follow out, the old rut. Good day.

I did not know that we had so many members that did not keep themselves informed of the current topics of the Order that they grace with their presence. Why don't some or all of our members who have membership in the B. of L. E. withdraw from them? Let me give you the advice that the B. of L. E. gives our members who are engineers and not members of the B. of L. E. "Why don't you give them up and come with us? It won't cost you much more, and if you get out of a job our card will get you work" (on the P. & R.). So will the B. of L. F. card, but you will need the same old letter from the Master Mechanic or General Superintendent as the B. of L. E. calls for, and don't forget to bring it, or you'll have to telegraph for it just the same as ever. A man that don't know an engine from a wheelbarrow can't get either of the cards or letters. It's a wonder you wouldn't get onto yourselves some time in the near future.

Charles H. Trenholm,
Boston Lodge No. 57.

—♦—
DENNISON, TEXAS, August 8, 1889.

Editor Firemen's Magazine:

I see a great many correspondents to our worthy organ, but have never seen a single line from No. 8. I know there are some here that could ably represent us and let our brothers over the continent know what we are doing.

Red River Lodge, No. 8, has over eighty members, but for the last year every one has seemed to lose interest in it—no attendance, no system. I think there should be something done to have members attend meetings more promptly, and in future, if our new officers do not do their duty there will charges preferred against them. There are a few here who never attend. We need Bro. Hannahan here to stir us up. Every one seems to be afraid. We do not stick together, do not put confidence in each other's support, still we are compelled to protect each other.

There are a great many of us here running engines who belong to the B. of L. F., and I will always belong; will never withdraw to join the engineers. The B. of L. E. has always made foot rugs of us. When they want help they call on

us, but when they do not, they do not recognize us. If any of us have a grievance, there has never been an engineer to sympathize with us. I will never again help the B. of L. E. until they say we can belong to both orders.

I think there should be two boards of adjustment in every Lodge—three firemen and three engineers. Our Master Mechanic and foremen are nice gentlemen, all of them. Our foreman, Mike Brown, is a perfect gentleman, but he has so much to attend to that he gets cranky a little sometimes but any one else would be cross. Three of the new engines are here. Business is good. One fireman here made \$114.75 last month. Engineers are not allowed to make over \$150.00. Twenty extra firemen are all making a living. There are fifteen extra engineers. I would advise our firemen to keep away from "Fords," as they will lose. The B. of L. F. members will be watched closely in future. Conduct yourself properly, or it will go hard with you. So-riety is our motto. I don't believe in carrying so many members when they can pay up in thirty days. If a member is sick a week, he wants the Lodge to carry him. No. 8 is as poor as a church mouse. There has been a Switchman's Aid Association organized here. They are men—I know their principles. Well, good day Mr. Editor.

Dennison Yard.

—♦—
GRAND RAPIDS, Mich., August 25, 1889.

Editor Firemen's Magazine:

Falling to notice in our *Magazine* any communication from Grand River Lodge, No. 285, I will inform all our brothers that we are still prospering. We have about seventy members and still they are coming. I am so situated that I can't attend all our meetings, but my heart is with them on all occasions. I enlisted in good old Calhoun No. 84, November 10, 1881, and I enlisted for life. It was then a small Order and the most of us were firemen. As the Order grew older our brothers were promoted to engineers, and to day I think most one-half of our members are engineers. I judge from our own Lodge. Our worthy Master is an engineer, as are a large number of our brothers.

And now as to the new name for our Order. I should like to see one that would cover all. I think the name which I see proposed is one that would cover all, and that is the Brotherhood of the Footboard. There are lots of members I know, who hate to part with the old banner we have sailed under so long. I, for one, do. But we, I say we, (I now speak the sentiments of No. 285) we are willing for anything that will be a benefit to all. I hope that at our next convention that matters will be settled satisfactorily to all. Our worthy Master, Bro. Decker, has just returned from a western trip, and I understand he had a very pleasant time. Our brothers are all anxious to receive a visit from our Grand Officers, which we all think will be soon. We will try and make it pleasant for all true brotherhood men who come our way. With my best wishes to the Brotherhood I close.

Kū.

TO F. X. H.

Ever since Atlanta, where Cupid with his darts,
Was shooting them, right and left, at many
throbbing hearts,
The little god observed a man, with heart all
iron-clad,
And said, "I'll pierce it with a dart—I will—that's
so—Be Dad."

He thereupon selected one, with a hickory stem,
And said, "Be Dad, this is the one that kills nine
times in ten."
He took good aim, and then let fly—great Caesar,
what a fall!
There was at Atlanta, said the friends of F.
X. H.—

The iron had disappeared from F. X. H.'s heart,
And in its very core was sticking Cupid's well-
aimed dart.
What next? A trip to——, a wedding ring
and vows,
A Benedict, a cradle, and going to keeping house.

Sliah.

A Terrible Accident.

MR. EDITOR:—On the night of July 28th a terrible accident occurred on the Oregon & California Railroad, at Albany Junction, in which Engineer John Miller, familiarly known as "Big Jack," and Bro. E. Q. Guthrie lost their lives. The train was the Oregon Express, which left Portland an hour and thirty minutes late, and was nearly an hour late leaving Albany—one mile north of which the accident occurred. The Junction is where the Lebanon branch comes into the main line, and main line trains do not stop. As a result, when the train reached this point it was running at a high rate of speed, and when the engine struck the switch she jumped the rail. Engineer Miller done all in his power to save the train, and succeeded, but at the cost of his own life and that of his fireman. The mail car, which was first behind the engine, took the Junction track, and, most unfortunately, neither draw-bar nor pin gave way, and as a consequence, the engine was thrown over bottom side up, with the mail car on top of the tank. Both men were caught under the wreck, and succeeded in getting out, but not before the scalding steam and water had done their work; possibly the only thing that saved them from dying before they got out, was the fact that when the tank was jammed against the corner of the running-board, a large hole was knocked in it, and the cold water poured over both men.

They were brought to Portland on a special train, but Engineer Miller died in an hour after getting to the hospital. He was buried at Muddy Station on Wednesday; the company running a special train for that purpose. He was a member of the A. O. U. W. and Division 277 of B. of L. E. and of the Masonic Order, the Masons taking charge of the funeral. Mr. Miller was 44 years old the day he died. He was a veteran of the civil war, having laid eighteen months in Andersonville prison. When he was released from that pen he weighed 90 pounds, and when he died he weighed over 250 pounds. He leaves a wife and two children, the youngest a baby of 5 months.

Bro. Guthrie, his fireman, survived him just

one week to the hour, and it was a week of terrible suffering. He was watched and tenderly cared for by his mother, brothers and sisters, who had hope of his recovery to the last. Bro. Guthrie was laid at rest in River View. The funeral was under the auspices of the Brotherhood.

The funeral of Bro. Guthrie furnished the second mournful chapter of the terrible wreck, the result of crime, perpetrated by three inhuman wretches, who removed the bolt in the switch-rail. The Portland *Sunday Mercury* of the atrocious deed, says:

The manner in which suspicion was cast upon them is without a precedent in detective history. Hill was at work for Thomas Froman, a farmer residing four miles from Albany. By some means he dislocated his elbow, and went to Albany for surgical aid. The doctor administered chloroform and proceeded to adjust the displaced joint. During the time that Hill was under the influence of the drug, he constantly talked of the railroad accident, saying among other things: "I didn't take out the bolt, but I know who did, but I'll die before I'll give it away." The doctor restored his patient to consciousness and instructed him to return on the following day that he might adjust the bandage to accommodate the swelling that would result from the injury he had received. He did as directed, and while in the doctor's office on his second visit, he inquired with evident uneasiness if anything further had been learned regarding the railroad accident. The doctor replied: "I have heard nothing except what you said while under the influence of chloroform." Hill hesitated an instant and then proceeded to make a full confession to the doctor. His statement was that on the Sunday the railroad wreck occurred, he and Fred and Herbert Rolfe were in town, and that they started for Froman's farm in the dusk of the evening, all under the influence of liquor. When they reached Lebanon Junction, he said Fred Rolfe, the younger of the two brothers, attempted to break the lock which secured the switch to its place, but failed. He then swore that he would take a bolt out of the switch-rail and began trying to do so. Hill further stated that he and Herbert told Fred to stop his foolishness, and went on, leaving him at work trying to remove the bolt. They had not proceeded far when Fred overtook them with the bolt in his hand. The doctor, after listening to Hill's statement, went to the office of Justice George Humphrey and gave him the information he had received, upon which warrants were issued and officers dispatched to arrest the guilty parties. They were found at Froman's, where they were arrested, conducted to Albany and lodged in the county jail.

The villains have made a full confession of their crime, and in due time will suffer the extreme penalty.

W. H. H.

AUGUSTA, GA., Sept. 4, 1889.

Editor Firemen's Magazine:

I take great pleasure in reading your valuable *Magazine*. I sincerely hope that it will continue to be a leading and protecting light for the B. of L. F., or rather, Brotherhood of the Foot Board. I also hope that the day is not far away when the Brotherhood will have a name that will represent both Engineers and Firemen, because you have both in your Order. I also hope that the firemen may stick to the old friend; that he may

"Remember well, and bear in mind,
A faithful friend is hard to find."

And that when they find one, good and true, like the B. of L. F., give not the old one for the new B. of L. E.

L. D. H.

SANTAFE, N. M., August 22, 1889.

Editor Firemen's Magazine:

As I have seen nothing from our Lodge I propose to let the boys know that there is such a Lodge as Kit Carson, No 257. Although I have not been in the Lodge for some time, as I live almost 200 miles away on the Santa Fe branch, in the old town of antiquities and curiosities, and one of the curiosities I found was the small pox, having had four cases in my family, causing loss of almost three months work. In my afflictions I was without a dollar, and no one to help me, as no one was allowed to come about my house. In the darkest hour there came a friend to me in the form of a postoffice order for the sum of \$25 from the Lodge. My heart leaped for joy, and I never will forget the boys of Lodge 257 for their kindness to me, and let me say that Bro. Edmunds, the one who came to relieve me, did the part of a brother toward me, and I love the boys of Lodge 267, with all my heart, and may the eye of Him that never shuts watch over them and lead them in the ways of prosperity. As to topics discussed in the *Magazine*—the one in regard to changing the Brotherhood's name—I do not know what the boys of No. 257 think about it. As to myself, I think the name is as good as either of those proposed, and I am in favor of the old name, but if changed at all call it the Brotherhood of Railroad Men. As to the engineers leaving on account of the name, they do not care much for the Order; and for what good the B. of L. E. has done for us I do not think it necessary to change our name to please them, for they would not stay with us anyhow, as they think they are a great deal better than the B. of L. F. As for the good they done me I shall always remember, and should like to speak of it here, but will forbear. True, I have not been a B. of L. F. man long enough to wear the pin, but I have always been a B. of L. F. in thought—ever since I commenced railroad work. I have gone out with them and stood with them, and in proof of this I was offered the second engine out of Hannibal on the Q. My reply to the two-story hat oppressor was, "If I can't run an engine like a gentleman I will never run one." And those boys that gave up their charter and rights to please those tyrants have but little thought for the laboring man's condition in the future. I do not expect I shall ever run an engine, as the road does not seem to set up every man, and I am too near worn out to commence elsewhere, but boys, hold firm in your principles, stand by your Lodge and the Grand Officers, and may I ever be able to pay my dues and other requirements and die in good standing in the B. of L. F.

I sincerely remain a
B. of L. F.

WAYCROSS, GA., August 20, 1889.

Editor Firemen's Magazine:

I was quite proud when I saw my letter to the *Magazine* in print, and as none of the other boys will say anything, will try once more to let the Order hear from Satilla Lodge No. 325. I don't

think there is a Lodge anywhere that could ask for any better success than we have. There is only one white fireman on the western division of this road who does not belong to the Order, and I don't think it will be long before he will be numbered among the tried and true. I can say a person never knows the good of the Order until he has occasion to leave one road and go to another. I am a young member, 'tis true, but from my short experience I will say, if I could not be a Brotherhood man I would just quit the road entirely.

Since we have organized here there is a great difference in the feeling of the engineers toward the firemen, and I am certainly glad to see it. My engineer thinks there is no book in the world like our *Magazine*, and I think he is about right.

At present our boys are in mourning for one of the noblest boys that ever lived, and that is Bro. Walling, who was killed in a collision on the 18th of July. He was one of the leading members of our Lodge, and will long be remembered by his host of friends on this road. I remain, as ever, a

B. of L. F.

PORT JERVIS, N. Y., August 28, 1889.

Editor Firemen's Magazine:

Thinking perhaps you and the Order at large might like to know how Port Jervis Lodge No. 1 is getting along, I will state that we are prospering first rate, with new members coming in right along, and with four applications in now. We hold a meeting nearly every Sunday; sometimes having debates that are very interesting. The brothers do not attend as often as they ought, but still we have a very good meeting.

Yours fraternally, J. H. F.

ALTOONA, PA., August 25, 1889.

Editor Firemen's Magazine:

As two of our worthy brothers have been promoted from the scoop to the right-hand side, I deem it worthy of publication. The fortunate firemen are F. A. Davis and W. R. Yockey. Bro. Davis is Receiver of Altoona Lodge No. 287, and Bro. Yockey, Trustee—two brothers who have the welfare of the Brotherhood at heart.

Yours fraternally, W. E. Burket, Sec.

For sometime past, Messrs. Reardon & Ennis, doing business in Troy, N. Y., have been manufacturing the Railroad Patent, Square Ventilated Dinner Pail, which has been advertised in the *Magazine*, and which has had a large sale and given great satisfaction. The firm now advertises an Electric Dustpan, which is said to be in all regards a superior device, so constructed that the operator can sweep perfectly clean all around it. The ad. appears elsewhere in the *Magazine*, and we invite special attention to it.

MEMBERS will take notice that their quarterly dues and protective fund dues are payable on or before November 1st, and that expulsion is the penalty for non-payment.

Personal.

On Friday evening, August 23d, Bro. and Mrs. G. W. Sebastian, celebrated the twentieth anniversary of their wedding at Crookston, Minn. Such occasions are brim full of joy and gladness, and we indulge the wish that on the occasion referred to the plenitude of happiness was more than usually large.

WILL H. SMITH, of Pike's Peak Lodge, No. 218, formerly of old 255, at McCook, was several months ago honored with the position of foreman for the Colorado Midland Co., at Aspen, Colo. We are pleased to learn that he has now been honored with a promotion to that of Superintendent of Car Inspector. Blood is bound to tell.

It was very sad when the "d—d nigger" prevented Bro. Miller from tickling his throat and stomach by drinking finger-bowl lemonade on the train. It was a shameful interference with the rights of a member of 82 and a citizen of the Blizzard State of the Union. It is enough to make Minne Tonka burst her stays and Minne Haha laugh herself dry.

CHEERING reports of the advancement of members of Altoona Lodge, No. 287 have been received. Promotion has come to a number of the boys and they wear their honors with becoming dignity. Among the latest promotions we are gratified to notice the name of F. A. Davis, Receiver; E. K. Gerhart, Collector; W. R. Yockey, H. B. Barke, John McNellis and S. D. McIntosh, all eminently qualified for right hand service, and we bespeak for them a record without a blemish.

Death of a Fireman.

The sad and untimely death of Bro. Orley T. Wheeler, of Connecting Link Lodge, No. 25, after a brief illness, is mourned by a large circle of friends who held the deceased in the most affectionate esteem. We extract the following closing paragraph from an extended obituary which appeared in the Boone (Iowa) Standard:

Orley had been employed as fireman for several months in the service of the C. & N. W. R. R. Co., and was a member of the Brotherhood of Locomotive Firemen of this place, under whose tender care he was nursed during his brief illness of eight days, and by whom his remains were attended to the grave, assisted by the Brotherhood of Locomotive Engineers and Brotherhood of Railroad Brakemen, where the beautiful and impressive burial service of the Order was rendered, together with the final benediction by the Rev. J. W. Allen, who also had officiated at the burial of his younger brother. The floral decorations by the neighbors were many and tasteful, and when combined with those from the Brotherhood formed an exceedingly beautiful tribute, to individualize which would be invidious, where all vied as to who could do most and do best. The love and kindness, the real tenderness of neighbors and friends, and especially the Brotherhood of Locomotive Firemen, will ever remain enshrined in the memory of the family and relations of the deceased.

A COMMUNICATION signed "Engineer," Pluver Grove, Texas, is declined because his name is not attached thereto. We have repeatedly given notice that anonymous communications can not be admitted to our columns. The name of the writer must accompany the communication, not for publication, necessarily, but as a guarantee of good faith. Writers who persist in disregarding this rule must not expect their communications to appear in our columns.

New York News Notes.

We take pleasure in reproducing the following list of "personals" which appeared in the programme of the Eighth Annual Reception of Just in Time Lodge, No. 149;

Nat Sawyer has been elected the "Maiden Delegate" of 363.

Will Bro. Bernstein please repeat to us the "Motto of the Order."

If you want to see Bro. Donigan smile, inquire of him about those pants he left in Atlanta,

Inquire quietly of Bro. Manning if he enjoyed himself on the evening of the 17th of July.

Pete Donohue has become quite an artist. His "latest" was sent to Bro. Hawley a few days ago.

J. Germain was looking unusually happy on the morning of the 15th of July. Sequel: It was a boy.

Why is it that a certain fireman of the Third Avenue Division calls Bro. Roscoe "Old Flew Rod?"

Can any one inform us why Bro. Lyons hangs his coat over the back window while going uptown?

To enjoy a good laugh, request Bro. Russell to sing you the song, "It Wasn't Coffee, It Wasn't Tea," etc.

Bro. Evans will soon take a trip up the Sound on his yacht. The boys wish him a most enjoyable time.

Bro. Reilly, of 363, has purchased a new goat, and is actively training it for use on Bro. Elliott in a short while.

Information is wanted as to how Bro. Cowdriek came to change his boarding house. Was it the young ladies?

The boys recognize in Bros. Harper and Russell, of the New Haven Railroad, two earnest and hard working members.

Engineer Wash, Parsons and his fireman, Bro. Williamson, are known as the "Coo-Coo crew" of the Third Avenue Division.

Bro. Peterson is one of the old stand-bys of 149, and one of its most jolly members, and can always take as well as give a joke.

Geo. Ford's smiling countenance can be seen every afternoon on the right hand side of Engine No. 185 of the Sixth Avenue Division.

Bro. Smith, of 291, is a hard worker for his Lodge and the organization. A party of members of 149 will shortly pay 291 a visit.

Bros. Martin and Mahoney, of 3, are occasional visitors of 149, and the members are always pleased to see them and listen to their remarks.

The boys of 149 have nothing but the best of wishes for Mr. Nat Sawyer, Chief of Division 145, B. of L. E., for his kindness to them on several occasions.

Will Bro. Gregory inform us why he most generally leaves the train at 195th street and Second avenue, when he resides in Seventy-second street near Third avenue?

Bro. Roscoe and wife request that when Bro. Donohue calls at their residence again with a committee, he will please not ring the bell like he did the last time.

M. J. Reilly, of 363, the second edition of Sir James Owen O'Connor, is running the night freight on the Harlem Railroad between White Plains and New York.

Nat Sawyer, of 363, is the Night Engine Dispatcher at the Seventieth Street yards of the Harlem Railroad, which affords him ample opportunity to cultivate his ale strainer.

Information is requested as to how Bro. Van Zandt attended the ball of Buffalo Lodge, No. 12, held in Buffalo in January, and at the same time was in New York attending to his duties.

Mr. J. D. Campbell, Superintendent of the Manhattan Railway Company, will shortly deliver a lecture to the boys of 149 on the construction and proper management of the locomotive.

Bro. Hawley would rather go without a good meal than miss a meeting. By-the-way, he is a single young man, and the members one and all will cheerfully recommend him to any young lady desiring a good husband.

Bro. Johns said he was going to the San Francisco Convention if he has to count the railroad ties between New York and there. By-the-way, what would be the matter with him and Bros. Perry and D-wey taking one of their barges and rowing there.

M. J. Lynch, the silver-tongued orator and Delegate of 363, is a most regular and welcome visitor at the meetings of 149 the boys looking upon him as one of their own members. By-the way, Bro. Lynch, have you had any "Connecticut or Virginia" dances since that night in Jersey?

While a party of the brothers were sailing up the Harlem river, a few days ago, Bro. Booth was seen on the bank with a long pole and line, attached to what looked to be an extraordinary large piece of ball. It was afterwards ascertained to be Bro. Witzel's body, and Bro. Booth was trying that modern invention to learn him to float.

Some of the brothers remark that it would be more appropriate for Bro. White to pay the maintenance of the New Polo Grounds fifty cents once in a while to see the game of ball than to sit in his window and look at it dead head.

The boys of 149 feel very thankful to Mr. E. J. Rauch, the Road Foreman of Engines, Eastern Division, for his assistance in obtaining for them an engine model from the Manhattan Railway Company and an injector and lubricator from the Nathan Manufacturing Company.

The firemen of the Third Avenue Division would like to see a half-mile running race between the light weight Engineers, Outwater, Ralph, Tyrell, Fowler, Thrall, King, Gibbs and Cafferty. Well boys, who would you place your money on for first place?

A New Name for the Brotherhood of Brakemen.

L. C. Mann, of Indianapolis, in the September number of the *Brakemen's Journal*, in discussing the necessity for a change of name, among other things says:

As we stand to-day we are composed of passenger, freight and coal train conductors, switchmen and baggage men, and to class these men under the one general term of "brakemen" is a misnomer and a fraud. We are no longer a Brotherhood of Brakemen, but rather a "Brotherhood of Railroad Train and Yard Men." Then why travel under an *alias*, no matter how dear it may be from association? Why not unfurl to the breeze a banner telling honestly and faithfully who and what we are?

Throughout, Mr. Mann argues the case cogently and makes many convincing points.

We regret that our absence from home prevented us from enjoying the pleasure of meeting and greeting Bro. T. T. Slattery, Third Vice Grand Master of the B. of R. R. B., who was recently in Terre Haute and honored the office with a call. Bro. Slattery is one of the most active and energetic members of the B. of R. R. B., a hustler from wayback, and is a tower of strength to his brotherhood.

NOTICE is given to Receivers that no assessment is levied by the Grand Lodge for the month of October.

Expulsions.

In writing of expulsions and their consequences, we deem it prudent to introduce the law upon the subject—sections 50 and 51 of the Constitution, as follows:

Sec. 50. The dues of a member of a subordinate Lodge shall be such an amount as the Lodge may determine, provided in no case it shall be less than five dollars (\$5.00) per quarter, payable quarterly in advance on or before the first day of August, the first day of November, the first day of February and the first day of May of each year. All assessments levied by the Grand Lodge for beneficiary purposes shall be paid from the fund thus created as hereinafter provided.

Sec. 51. Any member failing or declining to make payment of his dues as herein provided shall stand expelled, said expulsion taking effect on the second day of the quarter. On the second day of each quarter, or as soon as practicable thereafter, the Collector shall deliver to the Secretary in writing the names of all members expelled under the provisions of this section and the Secretary shall forthwith make a report thereof to the Grand Secretary and Treasurer, and at the first meeting thereafter he shall make a similar report to the Lodge and record the same on the minutes of the meeting.

The law is clear, explicit and easily understood. In reading it, no one need go astray, and yet it is violated in numerous instances. The fiscal year of the Order is divided into four quarters. These quarters begin on the 1st days of the months of August, November, February and May. On that 1st day of each quarter, every member must stand *square* on the books—that is to say, he must have paid his dues for that quarter in advance, not less than five dollars (\$5.00.) That is the law. It must be obeyed. It admits of neither violation nor evasion. It is wise, practical and just. It is the outgrowth of experience, and can be repealed or amended only by the power that enacted it.

If a member of the Brotherhood fails to pay his dues, not less than five dollars, in advance, for each quarter, on or before the first day of the quarter, he stands *expelled* the next day, the 2d day of the quarter. There is no appeal—neither Grand Lodge, nor a subordinate Lodge can interfere with the operation of the law.

Now read section 51. It will be seen, that the law requires that the *Collector shall deliver to the Secretary in writing the names of all members expelled by this section, on the SECOND DAY OF THE QUARTER*. Why is this duty imposed upon the Collector of the Lodge? It is because he knows who has paid, and who is delinquent, and therefore expelled.

Again, read section 51. It will be noticed that after the Collector has delivered to the Secretary the names of expelled members, that "*the Secretary shall forthwith make a report thereof to the Grand Secretary*."

Now, this is to be said: The secretaries of a number of subordinate Lodges have failed to perform the duty imposed upon them in section 51 of the Constitution. No report is made in cases when the law has expelled a member for

the non-payment of dues as provided in section 30 of the Constitution.

We assume that the Collector of the Lodge failed to deliver to the Secretary in writing, the names of delinquent members. If this surmise is correct, the chief blame rests upon that officer. If he faithfully performed his duty, then the blame rests upon the Secretary of the Lodge, but in either case, the Order suffers the consequences of its negligent officials.

To make the matter clear, if a member is expelled by the Constitution for the non-payment of dues, as provided by the Constitution, and the Collector or the Secretary of the subordinate Lodge, where the delinquent has his membership, fails to perform his constitutional duty, then in that case we have the anomalous condition of an expelled member still upon the roll of membership.

In this case, serious consequences might result. The expelled member might die or become totally disabled, and demand the payment of his insurance policy. The Grand Lodge might set up in defense that the member so claiming had been expelled and refuse to pay. The party demanding payment, would thereupon appeal to the books of his Lodge and show, that no record of his expulsion had been made; that on the contrary, the records show that at the time of death or disability, the member was in good standing, and to disprove the assumption, would involve time, trouble and expense, and possibly failure.

The attention of subordinate Lodges has been repeatedly called to this matter, but in numerous instances, the desire to have the laws obeyed has availed nothing.

Now we invite the attention of all the Lodges to the following Grand Lodge Order, in all such cases of delinquency on the part of Collectors and Secretaries.

In future, the Lodge failing to perform its constitutional duties in the matter of which we have written will be forthwith SUSPENDED. The rule will be strictly adhered to. Patience is exhausted, and forbearance is no longer a virtue. Extreme measures are demanded and they will in future be employed.

MR EDWIN CHATTENTON, the well-known engine dispatcher of the New York, New Haven & Hartford Railroad, recently had a narrow escape from death, but fortunately sustained no greater injury than a broken leg, which will keep him from duty six weeks or more. Mr. Chatterton is known to be a great friend of locomotive firemen, and was recently presented with a splendid gold-headed cane, by the boys in testimony of their appreciation of his friendship.

Unknown Address.

H. R. WIGHTON.—Is known to have been in Spring Hill, Montana, about the latter end of August; is six feet in height, slender build, brown hair, nose rather prominent. Any one knowing of his whereabouts will confer a great favor by addressing A. H. Gifford.

THE programme for the eighth annual reception of Just in Time Lodge, No. 149, New York City, held August 14th, is a gem of the art and an elegant and useful souvenir. It is gotten up in pamphlet form of large size and contains a complete and exhaustive history of the Lodge.

WE have received a copy of the Division Directory of the Brotherhood of Railway Conductors, in which we find that the Order has twenty-nine Divisions. A splendid showing considering the time the Brotherhood has been organized, and which bespeaks for it a grand victory.

To Secretaries.

In sending in applications for beneficiary certificates Secretaries should see to it that the full and correct address of the applicant appears thereon in the blank space assigned for that purpose. The *Magazine* is forwarded according to this address, and if it is incorrect the member fails to receive his *Magazine* and of course blames the Grand Lodge for the irregularity. If Secretaries will be careful in every instance to see to it that the correct address of newly admitted members appears on their applications for beneficiary certificates, numberless complaints and vexations will be avoided.

Attend the Meetings.

New York Dispatch.

The number of names upon the rolls of membership in the different railroad organizations shows that many thousand men have joined the cause. And now the question arises, how do the members attend the meetings of the several Divisions?

It is time to call a halt in the matter of enrolling names and swelling the membership, and turn to the duty of arranging some plan whereby the present members may all be induced to be punctual and steady in attendance at the meetings. It is not the number of names but the spirit and attendance that either makes or breaks an organization, for a body of ten men, punctual and steady in attending meetings, will do more good and effective work than will an organization of two hundred, of whom nine-tenths never make an appearance in the Lodge.

Non-attending members should be weeded out, or made to feel that the paying of dues does not constitute all the duties of a member.

The time has come when quality and not quantity is the great need of the day. Officers should impress strongly upon the minds of all members that constant and punctual attendance is what is needed.

New Haven Palladium.

"I've found an Irish name in the Bible," said Higgins to Wiggins the other day.

"In the Bible?"

"Yes, in the Apocrypha, at least."

"What is it?" asked Wiggins.

"Mac Cabea," was he reply.

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

OCTOBER, 1889.

Notice of Quarterly Dues.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., October 1, 1889.

To Subordinate Lodges:

SIRS AND BROTHERS:—Notice is hereby given that the Quarterly Dues, for the Quarter ending January 31st, 1890, is payable on or before November 1, 1889. The amount is regulated by each of the several Lodges, provided that it be in no case less than five (\$5.00) dollars. This payment will be in full of local dues and Beneficiary Assessments for the quarter. Any member failing or declining to make payments as above provided will stand expelled (said expulsion taking effect November 2d) and will be so reported by the Secretary to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Notice of Protective Fund Dues.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., October 1, 1889.

To Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified that the amount of seventy-five (75) cents for the Protective Fund for the quarter ending January 31st, 1890, is now due, and must be paid to the collector on or before November 1st, as provided in Section 25 (Page 62) of the Constitution. Any member failing or declining to make payment as herein provided, will stand expelled, said expulsion taking effect November 2d, of which the Secretary is required to make due report to the Grand Lodge. Yours fraternally,

F. P. SARGENT, G. M.
EUGENE V. DEBS, G. S. and T.

Acknowledgments.

DANVILLE, ILL., July 25, 1889.

To the members of *Hercules Lodge*, No. 63, B. of L. F., Danville, Ill.

Please allow me to return my sincere thanks for the \$1.50 insurance, due me on the sad death

of my husband, J. F. Grabill, who died Nov. 24, 1888. May the blessings of heaven rest upon the noble Brotherhood, now and forever in my prayer. Many thanks to you all, especially to the Danville members of the Brotherhood.

MRS. FANNIE GRABILL.

BONHAM, TEXAS, July 31, 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—It is with feelings of sincere gratitude that I acknowledge the receipt of a draft for \$1500, due on my disability claim. My draft was presented to me by our worthy Brother, N. Moyer, of J. H. Selby Lodge, 213. Wishing the Brotherhood Godspeed, I remain,
Your disabled Brother,

W. F. THAYER.

DAYTON, OHIO, July 18, 1889.

To the Officers and Members of Eclipse Lodge, No. 107, B. of L. F.:

GENTLEMEN:—I hereby return my sincere thanks for the payment of the draft for \$1500. I also wish to thank the officers and members of Eclipse Lodge, No. 107, for their kind attention to us, and for the respect paid my son after his death. Wishing the noble Brotherhood a prosperous future, we remain

Respect fully,

MRS. BARBARA LEESHER AND DAUGHTER.

MAUCH CHUCK, PA., July 25, 1889.

Mr. S. E. Canaday, Secretary pro tem, Lodge No. 98, B. of L. F., Terrace, Utah:

DEAR SIR:—Yours of the 17th enclosing draft on National Park Bank of New York, for \$1,500.00, money due me on policy held by my son Elmer E. Line, was duly received and herewith enclose receipt for same as requested. I am very thankful to the Lodge for the money, and that they may prosper, is the wish of
Yours respectfully,

MRS. ELIZABETH LINE.

WICHITA, KAN., September 1, 1889

To the Brotherhood of Locomotive Firemen:

DEAR SIR:—Allow me to say I have received through the officers of the Walnut Valley Lodge, No. 303, of which my son was a devoted member, a draft of \$1,500.00 the amount of policy held by my son, Mike Fitzgerald.

I wish to express my devoted thanks to the members of the Walnut Valley Lodge and for the kindness shown in his sickness and death.

MRS. JENNIE ANENER.

MATTOON, ILL., August 26, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to acknowledge the receipt of a draft from J. K. Robinson, Secretary of Bee Hive Lodge, No. 179, of fifteen hundred (\$1,500.00) dollars, being the amount due me on insurance policy held by my late son, Charles Miller.

You will accept my sincere thanks

MRS. L. L. B. MILLER

POMEROY, OHIO, August 31, 1889.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to express the gratitude and thankfulness myself and family feel for the kindness and attention shown at the time of the death of my dear son Otho.

Though away from home when he departed this life, what a comfort to us in our sad affliction, to know instead of being among strangers, there were so many willing hands and kind hearts ready to do for him. And let me again thank you for your promptness in meeting the claim of fifteen hundred dollars, which I received without any trouble to myself whatever.

Very sincerely yours,

MRS. M. M. FOSTER.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., September 1, 1889.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending August 31, 1889:

RECEIPTS.

Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.

THE BURLINGTON STRIKE:

A concise history, giving a vivid picture of it and its paralyzing effect. The official effort to obtain substitutes; characters of those obtained. Pictures of wrecks caused by incompetency. Why do men organize? Defiance of organized labor. Treatment of the employes by the Burlington officials, leading to the strike of 1888. Strike of 1862. Committee of 1873. Pay cut, and classification established 1876, action of committee on same. Strike of 1877; promises made. Committee of 1883, broken up by discharge of part of it. Contract of 1886; violation of it. Committee of 1888, Engineers and Firemen, and the strike to a finish. Investigation by the Illinois and Iowa R. R. Commissioners, of the men employed. The dynamite conspiracy, and the Pinkerton evidence that was made to convict. Closing with a vivid portrait of 47 year's life on a locomotive—memoir of C. H. Frisbie, one of the oldest engineers in the United States. Every laboring man should have it. Agents wanted.

Address, C. H. SALMONS, Sec'y,
Lock Box 74, Aurora, Ill.

Key to Alexander's Ready Reference FOR ENGINEERS AND FIREMEN.

Giving the reasons why the instructions given in the Ready Reference should be followed.

This book is a Valuable Accompaniment to its predecessors, and contains nearly as much information as the Ready Reference, and a number of new items. Also a table showing the amount of time required to run from one mile up to one hundred miles.

It is now ready for issue.

The New Edition of Ready Reference has also a number of new items treating on Extended Smoke Boxes, Cylinder Lubricator, Broken Cylinder Heads, Broken Set Screws, Defects in Injectors and Pumps, also defects in Air Pumps and how to remedy them. Every item in either book is easily understood by any person who can read.

The Book contains a very handy Time and Speed Table, showing the amount of time required for running any speed from ten to sixty-five miles per hour and from one-tenth of a mile up to thirty miles. Some of the items have never before appeared in print. Three large diagrams of Engines, one complete diagram of Westinghouse Automatic and Air Brakes, with a full description of them and the manner of handling and repairing them when out of order; also a large diagram with description of Valve Motion accompanies each Ready Reference. A careful study and thorough understanding of the principal items of these books will qualify any good fireman for examination and promotion. Old Runners say there is nothing in print as suitable for Locomotive Engineers and Firemen or Round House men working on repairs of Locomotives. It is the result of forty years actual experience and study.

Price of Ready Reference, with Diagrams \$1 00

Price, with Key bound in, and Diagrams 1 50

Price of Key, without Diagrams 50

Amount can be safely sent from any Post Office by Money Order, Postal Note or Registered Letter. Cash must accompany all orders. No Books sent C. O. D. Address

To cure any case. With each order received by us
for six boxes, accompanied with \$5.00, we will send
the purchaser our written guarantee to refund the
money if the treatment does not effect a cure. Guar-
antees issued only by

JAMES SOMES, Druggist, Sole Agent,
Cor Sixth and Ohio Sts., Terre Haute, Ind.

AN INTERESTING HISTORY OF

Dimmick's Kidney AND Bladder Cure!

Having contracted a kidney difficulty while serving in the army in 1864, I was enabled to serve out my time only through the assistance of our regimental surgeon. Returning home in the fall of 1865, I found my old enemy [the kidney trouble] still clinging to me. I placed myself under the treatment of several successive physicians, who gave me temporary relief, but were unable to effect a permanent cure. I paid large sums of money to the different physicians whom I consulted, and tried all the various remedies which promised relief, but to no avail. I continued my efforts until the spring of 1875, my malady in the meantime increasing to such an extent that on several occasions I became unconscious and was confined to my house for several weeks at a time. I was then induced, through the earnest solicitation of a friend, to consult an old and learned practitioner of Chicago, then temporarily located in Binghamton. This physician gave me a prescription in liquid form, of which I used two bottles. The lameness in my back disappeared and I was relieved of the severe pains I had previously suffered. Having experienced such happy results, and feeling my utter helplessness in case of a recurrence of an attack of a similar nature, I decided, if possible, to purchase the recipe for compounding what is now so favorably known as "Dimmick's Kidney and Bladder Cure." The old physician, who was about removing to the Southwest, after some hesitation, consented to dispose of the recipe to me on payment of a considerable sum of money. About two years after the purchase, while acting in the capacity of a railway engineer, I became affected with a prickling sensation in the face, arms, right side and right leg extending to the knee, followed by numbness, or a partial paralysis. This gradually made such inroads that I practically lost the power of locomotion and had no use of my right arm. I was compelled to relinquish my position as an engineer, ran down physically, and became a mere shadow of my former self. The best medical talent abandoned my case as hopeless, and it was the commonly expressed opinion among my associates and acquaintances that I would soon pay the debt of nature. In my extremity, and not knowing the efficacy of the remedy I had purchased, a relative wrote to the physician from whom it had been obtained for advice, and received the answer that I had in my possession a recipe that was a specific for that difficulty. I at once commenced taking it, and in 75 hours experienced a sense of grateful relief. I continued its use for about one year, taking in that time fifteen of the large sized bottles. This was two years ago and now I am as well and strong as I ever was and run my engine 110 miles a day. I feel that it has saved my life, and I heartily commend it to my fellow sufferers.

A. D. DIMMICK.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York.

308 Walnut St., Philadelphia

70 Kilby St., Boston.

36 Main St., Norfolk, Va.

1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1888. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,800,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Special Announcement to R. R. Firemen!

The results of sales the past year by railroad boys acting as agents for

THE BEST POLISH IN THE WORLD.

BAKER'S

TRIPOLINE

Having been so satisfactory, we will for the balance of this year, ending Jan. 15th, next

LEGS AND ARMS

WITH
RUBBER FEET AND HANDS.

Fig. 1.

tent Judge have commended the rubber foot and hand for their remarkable advantages.

Awarded the highest prizes at every competitive exhibition.

Endorsed and purchased by the U. S. Government.

A treatise of 400 pages with 200 illustrations and copyright formula, SENT FREE.

Fig. 1 is from an instantaneous photograph of a man ascending a ladder; he has two artificial legs substituting his natural ones, which were crushed by a railroad accident and amputated. Fig. 2 exposes his stumps. With his rubber feet he can ascend or descend a ladder, and balance himself on the rungs. He can walk and mingle with persons without betraying his loss: in fact, he is restored to his former self for all practical purposes.

With the old methods of complicated ankle-joints these results could not be so thoroughly attained.

Over 9000 in practical use, scattered in all parts of the world. Many of these have been supplied without presenting themselves to us, simply by sending measurements on a copyright formula which any one can easily fill out. Eminent surgeons and compe-

Such as Wedding or Ball Invitations, Programmes, Menus, Address Cards, or anything in Book-binding? If so, send to MOORE & LANGEN, Terre Haute, Ind.

SOMETHING NEW

THE

ONLY PERFECT DUST PAN
MADE.

"ELECTRIC" DUST PAN.

Its round shape enables dust to be swept up easily from all directions into its central chamber, and to hold its edge permanently. No upsetting and vexatious scattering of dust.

No stooping down, as the foot hold the dust pan secure at any point. Made in one piece. Convenient, strong and ornamental.

To introduce these Dust Pans we will deliver one of these Dust Pans, boxed and Expressage paid at any Express point in the United States on receipt of THIRTY-FIVE CENTS.

Please show this advertisement to your wives and sweethearts.

REARDON & ENNIS,

Sole Manufacturers, Troy, N. Y.

While you are hesitating about Buying a Filled Watch Case, let us

FUT A FLEA IN YOUR EAR.

First, DURABILITY—You need have no doubt here. Our filled cases will not fail you in this respect. Take this as a warranty; we mean it. What we say of the different grades of the Boss cases we guarantee. "But," say you, "it is easy to say 'guarantee' at the front end of a trade." We wish you to understand that we are at the hind end of all the guarantees we make as well as at the front end. We're easy on this point for

We've made Boss Cases long enough to know what's safe to promise about them.

Now, CONSTRUCTION.—UTILITY. Boss filled cases keep the dirt out. They're "built that way." The Dust Bands do it—in all our cases. Your fine movement is as safe from dust and cinders as if in the innermost chamber of the Great Pyramid!

The Third Point Is Beauty. We've spoken of Durability and Utility. You want the pleasing quality also. If "a thing of beauty is a joy forever," as Keats said, you may find a good many "joys forever among the Boss case designs your jeweler will show you if you ask him. This is a point we needn't dwell on. You can tell what pleases you—we can't. Only, look at the patterns—that's all we ask.

NOVEMBER, 1889.

AUSTIN CORBIN IN THE NORTH AMERICAN REVIEW.

Impudence, hypocrisy, chicane, knavery and such other mental and moral defects as go to make up the modern scoundrel have no limits, and if such moral monstrosities have cash, as in the case of Corbin, they are able to push themselves to the front, and with exhibitions of effrontery that defy exaggeration or characterization, play the role of injured innocence, and demand for themselves a verdict of indorsement in the face of facts which pronounce them irredeemably vile, depraved and capable of perpetrating deliberate crimes, richly meriting the title of villain, and which ought to subject them to penal servitude.

The times, prolific of such abnormal productions, have not brought to the surface a creature of mental and moral deformities more repulsive than Austin Corbin, who in the October number of the *North American*

Review, writes of "The Tyranny of Labor Organizations."

Austin Corbin has money, a boast that any successful burglar, counterfeiter or pirate can make with equal nonchalance. Money, more than charity, is made to obscure a multitude of faults, but in Austin Corbin's case, while money paralyzes justice, thereby permitting him to practice his schemes of knavery, it has not saved him from the destestation of all honorable men. He is known to be a depraved wretch capable of concocting schemes of robbery, and this he has done with such a reckless disregard of law, with such shameless perversity, with such a piratical defiance of right, justice and public opinion, that the Congress of the United States was called upon to investigate his deep laid schemes of wreck and robbery, and a committee of Congressmen visited the "black hills," where his rule has produced poverty, degradation and famine, and as directed, have prepared a bill, which if it becomes a law, will, in some measure, at least, check the evils his rule has inflicted.

That such an abnormal combination of all that is loathsome in greed, of all that is depraved in morals, of all that is disreputable in business, of all that is false in profession, not content with a reputation for infamy which makes his name the synonym of all things despicable, should seek further conspicuousness by slandering labor organizations, can be accounted for

only upon the hypothesis that his inherent venom, like that of the rattlesnake at certain seasons, has so diffused itself through his mental, moral and physical organism as to render him blind to all things decent. There is not a labor organization on the continent that does not loathe the name of Austin Corbin, and his paper published in the *Review* will serve to intensify their detestation.

Austin Corbin, more properly Austin Cobra, starts out by saying, "it is a mistake to assume that employers are always wealthy capitalists." No labor organization in the country ever made such a mistake. On the contrary they know, as well as does Cobra Corbin, "that in a vast majority of cases employers are not men of great wealth." Many stockholders in great enterprises are people of moderate means. Such was notably true in the case of the Philadelphia & Reading Railroad, in which widows and orphans and men of small means made investments and received large dividends, but when such men as Cobra Corbin got hold and dominated the affairs of the splendid property it was wrecked and became the most corrupt corporation on the continent, but never until Cobra Corbin inserted his fangs into the corporation did it reach such a low degree of demoralization as to demand of the Congress of the United States an investigation and legislation to check, if possible, a career of unprecedented scoundrelism. The rascalities of Corbin are now as well understood as the treason of Benedict Arnold, or the colossal boodle career of Boss Tweed.

This superlative record of knavery is now known to the nation by virtue of the report made by the Congressional committee. It is not given to every scamp to have a national reputation, nor is every exposed knave proud of notoriety. Corbin is an exception. He seems to glory in his infamy, and has the vanity to suppose that by denouncing labor organizations his name will go down to history after the fashion of the fool bull that tried to arrest the speed of a locomotive.

In his article on "The Tyranny of Labor Organizations," Corbin asserts "there never has been a time," and assumes "there never

will be" a time the worker will not be permitted to leave "his employer's service." and upon the heels of this old chestnut remarks, "the worker in this country at least, under the law, happily, is not a slave." By all the Pagan gods at once, what a discovery! Not a slave "under the law." Ho! all ye workingmen, are you not under lasting obligations to Cobra Corbin for the declaration? And yet this embodiment of hate toward labor organizations without law, has compelled men on the Philadelphia & Reading Railroad, and in the mines controlled by that corporation, to play the part of slaves, to renounce their rights as men and as citizens, and yield to his dictation, the penalty of refusal being idleness. "Some employers," says Corbin, and he is of the number, "employ no new men who are members of any of the labor unions; applicants are required to promise not to join any while retaining their employment; those who prefer the unions are required to quit the service and promotions are entirely confined to those of undoubted loyalty to their employer and his policy."

It is eminently worth while for the working men, and all others who are interested in labor problems, to compare the "tyranny of labor organizations" with the tyranny of Corbin's rule in the anthracite regions of Pennsylvania, as set forth in the paragraph we have quoted. But preliminary to such comparisons the terms "tyranny" and "tyrant" should be defined. In this country the laws recognize neither one nor the other; nevertheless, in defiance of laws men exercise tyrannical authority over the affairs of men as autocratic and despotic as characterizes the reign of a Russian czar, and this has been done by Austin Corbin to an extent that the Congressional committee which investigated his methods did not hesitate to say he had "Russianized" the anthracite coal regions of Pennsylvania. To accomplish his tyrannical purpose he found it necessary to attack labor organizations, not because such organizations were tyrannical in their methods of operation, but because they stood in the way of his despotic sway.

What are the methods he adopted to carry out his nefarious designs? It is in proof

that by cruelty and oppression he drove his employes to resistance. He deliberately inaugurated a strike, which had these villainous purposes in view, characterized by hypocrisy, tyranny and robbery. He intended to advance the price of coal and thereby rob the public. He intended to reduce wages, and thereby rob his employes. He intended to break up labor organizations, and thereby reduce the men who would accept employment under him and the vile creatures who played the part of catiffs in response to his orders, to the degraded condition of *serfs*. His schemes succeeded. He did rob the public, he did reduce wages, and he did abolish labor organizations. Nor is this all. Corbin's villainies did reach the attention of Congress, and a committee of that body passed judgment upon him, the first instance on record, and now the scoundrel is known to the nation, not only as a tyrant, but a pirate as well, a brass-cheeked, bronzed-faced monstrosity, who, metaphorically, at least, is gibbeted before the world, and has become the target for the righteous maledictions of all men who abhor hypocrisy and depravity.

Such is the imperfect characterization of the man who stains the pages of the *North American Review* with the venom of intense hatred, but the excessive malignity of the attack, like an over dose of some poisons, defeats the purpose in view, and while labor organizations are not harmed, Corbin, by a law of retributive justice, is made more conspicuously infamous.

In what regard, we inquire, are labor organizations tyrannical? Throughout their entire history they have sought to achieve for working men better conditions. Not by antagonizing capital, but by defeating the impoverishing and degrading schemes of such heartless scoundrels as Austin Corbin. To defend labor organizations when attacked by such knaves as Austin Corbin it is not required to say that they have made no mistakes; that every movement and method has been perfection, the embodiment of wisdom, and therefore deserving of approval. Labor organizations are human, and therefore fallible. This may be said with equal propriety of all human organizations, including the church; but it may be said,

and should be said, because it is an eternal truth, as imperishable as the pillars of God's throne, that from first to last, every where, in all zones that belt the earth, where there has been a labor organization, their purpose has been to resist tyranny, oppression, despotism and degradation; to obtain fair wages for work; to elevate their membership in the scale of being; to obtain food, clothing and shelter befitting human beings, and something more for rainy days, for sickness and old age; to advance in educational power, consideration and influence; in moral excellence, in culture and refinement; to awaken noble aspirations, that in all things pertaining to citizenship there should be such development of mind forces, such comprehension of duties and prerogatives as would redound to the welfare of the state and be accepted as guarantees of the perpetuity of free institutions. Such are the undeniable facts of history relating to labor organizations. They have been written in tears and blood, with "an iron pen and lead in the rock forever." The chronicles are filled with records of victories and defeats, but every repulse has inspired defiance, and every triumph has emphasized the conquering truth, that

"Freedom's battle, oft begun,
Bequeath'd from bleeding sire to son,
Tho' baffled oft is ever won,"

And in confirmation of the truth, there is not a breeze nor a gale that freshens and blows in all our broad land, from ocean to ocean, from gulf to inland sea, that does not touch and unfold the banner of a labor organization bearing the motto, "The final triumph of labor draweth nigh." And yet it is these labor organizations that Austin Corbin, the bloated, cash-cursed representative of ideas as hostile to American institutions and to the genius of our government as ever sent a head to the block or a neck to the halter seeks to overthrow. What are the methods employed by virtue of which he has gained a temporary victory?

1st. To give employment to no man who is a member of a labor organization.

2d. To require a pledge of every man employed that he will not join a labor organization.

3d. Men employed who favor labor organizations are required to abandon their work.

4th. Promotions are entirely confined to men of undoubted loyalty to Corbin and his policy.

Corbin has at least 35,000 men in his employ who have yielded to his enslaving programme. They have renounced their rights as men and as citizens; they and their wives and children are Corbin's slaves; they are reduced to commodities; they are Corbin's chattels, and this condition of degrading servitude, of monstrous tyranny, comes at a time when the emancipated African slaves and their descendants are manfully asserting and maintaining rights which Corbin's employés, for considerations of bread and meat, throw to the winds. It is such facts that compelled the Congressional committee to declare that Corbin was "Russianizing" the anthracite regions of Pennsylvania.

It must not be assumed that Corbin is the only tyrant who rushes into print with his pleas to "excuse his devilish deeds." He is not the only gold-plated giant who uses his tyrannous strength to crush labor organizations. He may be more soulless than others of his type, may have more rattles on his tail and more fangs in his mouth, he may be the representative reptile, he may take more delight than others in seeing men resign their hopes, renounce their rights and forget their wrongs, when yielding to orders from his iron lips, but there are others, animated by his example of infernal despotism, who, revelling in the weakness and wickedness of luxurious power, have determined to break the bonds of brotherhood which bind man to man, and this accomplished, make the very sun in the heavens blush for the degeneracy of American citizens, who resign their birth-right at a time when the school and the church, press, poet and orator, the philanthropist and the statesman would have the world believe that ours is the "land of the free and the home of the brave."

The time has come for workingmen to rise superior to faction, to look facts squarely in the face, and determine to unify, to federate, consolidate, and thereby suc-

cessfully resist the encroachments upon their rights and liberties by such men as Austin Corbin.

.....
THERE are some people who are inclined to the belief that the time is near at hand when nations will learn war no more. Such persons do not consult the records, they do not keep up with the procession. The *Mechanical News* says:

Figures are at hand, also, regarding the navies of Europe; but for the present we shall confine ourselves to the purely military aspect of the question. For the sake of convenience we put the figures covering the different grades of the armed forces of the different nations in tabular form:

	War Strength.	Second Reserves.	Final Reserves.
Germany	2,520,000	1,520,000	1,880,000
France	2,440,000	1,570,000	1,700,000
Russia	2,405,000	1,980,000	2,200,000
Italy	1,010,000	1,320,000	1,200,000
Austria	1,145,000	1,470,000	1,700,000
Turkey	620,000	810,000	840,000
Balkan States . .	250,000	165,000	195,000
Total	10,48,000	8,335,000	9,195,000

The column headed "war strength" shows the approximate number of men disposable for offensive purposes in the event of the outbreak of war in 1890. The second column, headed "second reserves," shows the approximate number of men who in the event of the outbreak of war, would join the colors, but remain at home unless circumstances required them at the front. The third column, headed "final reserves," shows the number of men who, in addition to the above, would be available for defensive purposes in the event of invasion. The men in the first and second columns are all of them trained soldiers who have served with the colors. In the last column, many, but not all, of the men are also veterans.

All the nations named, are ready for a "strike" at a day's warning. They keep up these immense standing armies not altogether for the purpose of resisting invasion, but to keep people, who wish to rise above the level of slaves, silent and submissive. The annual cost of maintaining these standing armies is about \$600,000,000, and during the last seventeen years, they have cost not less than \$7,500,000, every dollar of which has been derived from labor. If workingmen should conclude to be idle one year, thrones, dynasties, crowns, scepters, armies, etc., would be involved in ruin.

.....
It is said that for 1889, the total revenues of the Government will reach \$440,000,000. Please remember that every dollar of the amount, is paid out of the surplus earnings of labor. That is the exact size of the fact, and don't you forget it.

THE CORPORATION INSURANCE SCHEME.

Consulting the pages of the *Magazine* it will be found that we are on record in opposition to Corporation Insurance Schemes. As the months go by, our opposition, instead of undergoing any modification, becomes strengthened. It may be said, and we think it ought to be said, that reasons should be assigned for this opposition. Hitherto, when we have written against the Corporation Insurance Schemes, we have assigned reasons for our antagonistic attitude. We deem it prudent to repeat some things we have written upon the subject and add such other arguments and conclusions as are warranted by the facts in the case.

At the outset let us be particular. There are before railroad employes two propositions. Parenthetically, let it be understood, that this *Magazine* is the official organ of the Brotherhood of Locomotive Firemen, and that in using the term "employé" we refer particularly to the membership of that Order, however wide the scope of the reasoning. The two propositions of insurance are, first, that of the Brotherhood, and secondly, that of the corporation.

The Brotherhood scheme involves vastly more than dollar and cent insurance. The corporation scheme begins and ends with the money consideration.

The Brotherhood idea is an elevating, educating idea. It glows with fraternal beauty. It is a bond of social union. It brings into harmony the homes of brothers. It creates an unselfish desire for mutual happiness and prosperity. It awakens, broadens and intensifies sympathies. In times of trouble and affliction the great heart of the Brotherhood is touched, and in a thousand ways the unfortunate brother, or the family of a brother, receives tokens of love and kindness which glorify our much abused human nature and demonstrate to all, except soulless corporations, that Brotherhoods of railroad employes ought to be encouraged.

No one, fit to be outside of an asylum for the insane, claims for the corporation any brotherhood sentiments. Benevolence, beneficence, generosity, alms giving, benignity, charitableness, and so on to the end of

the chapter of active goodness, are unknown to the corporation. It is not built that way. All of its ambitions, purposes, aims and efforts are to make money—increase profits and dividends—and if it organizes an insurance scheme the end in view is the same.

For illustration take the two corporations, the C., B. & Q. and the Philadelphia & Reading. They are great corporations in the sense of employing a great number of men, of having an intolerable burden of debt; of being virtually wrecked, and of being the implacable enemies of labor organizations. The Czar of Russia is not more hostile to Nihilists than are these two corporations to workingmen who are the members of a Brotherhood, and yet these two corporations have concocted insurance schemes for the purpose of robbing their employes and of breaking up Brotherhoods of railway employes. In our November issue, 1888, referring to Corbin's scheme on the P. & R., we said :

This fund is to be raised by monthly contributions of members, payable in advance, and the method of collecting is to deduct the contributions from the employes' wages. The benefits are divided into five classes, and range from fifty cents a day for sickness to those who earn \$40 a month, to \$2.50 a day to employes whose salaries are over \$100 a month. In case of death the claims of contributors range from \$250 to \$1,200. Employes under 45 years of age can become members of the association by undergoing a medical examination. The company agrees to assume all expenses of the management of the association and to contribute to the funds to the extent of 10 per cent. of the sum contributed by the employes until the fund reaches \$1,000,000.

The foregoing outlines the Corbin scheme, and it stands for all others of its ilk. Railroad employes cannot do better than to exhaustively analyze the scheme. It was in testimony before the Congressional committee, appointed especially to investigate Corbin's scoundrelisms, his feats of robbery, of falsehood and fraud, that he had on the Reading 15,000 employes; and it was furthermore in proof that Corbin and his associates had deliberately brought about a strike, that he might rob the public by advancing the price of coal and then rob his employes by reducing their wages—and this is the masculine devil-fish who exhibits solicitude for his employes by devising an insurance scheme, bristling with fraud and felony in every proposition. What else could be expected of such a colossal blood sucker? The unfortunate employé who receives \$40 a

month gets 50 cents a day if he is sick, but he must be sick a week before his 50 cents a day begins, and at the end of the month his assessment is taken from his wages the same as if he had been at work all the time. Now suppose John Smith was stricken down with cholera morbus on Monday morning, called a doctor immediately, writhed in agony five days, and was then pronounced out of danger. In that case John gets no sick benefits. He went into the scheme, possibly, with his eyes open, but whether open or closed, he went in, and it is worth while to find out the benefits John received. At the end of the month John's account would stand about as follows:

John Smith, wages for one month	\$40.00
Deduct five days' sickness at \$1.33 1/3	\$3.06
Assessment to insurance scheme,	1.00
	9.06
Due John Smith	\$30.34
Sick benefits	.00

But suppose John Smith was sick fifteen days and then died. Suppose his sickness began on the 1st day of the month—hence he was earning nothing. At the end of the month John's account would stand about as follows:

John Smith's death benefit	\$250.00
Deduct assessment	\$1.00
House rent, one month	8.00
Doctor's bill	15.00
Coal, one month	4.00
	28.00
Due Mrs. Smith	\$222.00
Mrs. Smith buried her husband, and the funeral expenses were, say	\$75.00
Her medicine bills and other expenses amounted to, say	25.00
	100.00
Mrs. Smith's fortune	\$122.00

She has, say, three children, and with her \$122 she is called upon to face the world, the flesh and the devil. Corbin has smashed the Brotherhood. John Smith was one of his cattle, part of his rolling stock, a part of his machinery. Dead, he is no more thought of than if he had been a mule.

On the Reading, under Corbin, the Lodge-fires are all extinguished. No word of brotherly sympathy, of kindness, of help, is ever heard. On Corbin's system it is every man for himself, and the devil take the hindmost. Corbin has injected into his employes his own spirit of indescribable sordidness. His employes are his slaves. They crawl in the dirt and do his bidding. If manhood were fire there is not enough of it in his 15,000 employes to light a cigar-

ette, and his insurance scheme helps on the work of degradation; in a word, he has Russianized his road as he has his mines. He's the Czar and his men are the serfs.

Corbin proposes to raise, in due time, from assessments upon his slaves, \$1,000,000, or \$900,000, stipulating that the road shall put in \$100,000 of the \$1,000,000. Corbin will raise the amount. His poor, debased, degraded, degenerated serfs will pay it in. Corbin will pay nothing. He will simply manipulate the figures. The \$1,000,000 will all be paid by his reptilian employes. They can't help themselves. They are without manhood, independence, self-respect, or any other redeeming quality. They pay in their money but have no more to say about its management than so many dogs. If Corbin deemed it necessary, they would submit to being known by their number, and not their name. In such cases the process of degeneracy is rapid, and Corbin may yet deem it prudent to brand his employes, as Texas ranchmen do their steers, and in Pennsylvania, the State of Penn and of Franklin; the State where the Declaration of Independence was written and first read, declaring "all men created equal;" it may yet happen that Corbin will not only brand his employes, but also their wives and children.

Corbin wants the \$1,000,000 from the wages of his employes. He thinks the sum sufficient to insure the everlasting degradation of his men, who would have on an average, \$66.66 interest in the pot, and that is about the value Corbin thinks the men set upon their manhood. The success which has attended Corbin's scheme does not surprise us. We predicted such results. Referring again to the utterances of the *Magazine*, we reproduce the following from our November issue:

Such railroad magnates as Corbin are students of human nature, and in concocting their mutual insurance associations, they reason about as follows: "The great body of railroad employes do not receive sufficient wages to enable them to belong to two associations requiring the payment of dues, therefore if they can be persuaded to contribute to our Insurance Association they will abandon the brotherhood, or what is still better, will not join one; hence in this way we shall strengthen the corporation while we weaken the brotherhoods." These railroad officials reason well, their conclusions are logical. The great body of railroad employes do not receive sufficient pay to warrant a membership in more than one organization supported by dues or assessments, and if Corbin can persuade his 15,000 employes to fall into the trap he has set

and baited he will be able, as soon as they have paid in money enough to exert any considerable influence upon their action, to dictate terms to them and assign them any degraded position he may choose, and they will be powerless to resent the insult, unless they, realizing their degradation, abandon their employment and leave their hard-earned dollars in the hands of Corbin and his associates. If they go away they lose all they have paid in; as a result, the longer they remain the stronger and more galling becomes the chain that binds them, and this the magnates know, and it is upon such conditions that they rely for final success, then railroad corporations may count upon their employees as under the old *regime* the southern planter counted his slaves or the Russian Duke his serfs.

The corporation proposes to break down labor organizations. Why? They are the citadels of manhood, of independence, of self-reliance, of all things that adorn and dignify citizenship. The corporation is unalterably opposed to the growth and perpetuation of such virtues in their employes. Corbin conceived the scheme of utterly abolishing such organizations. With consummate cunning he brought about a strike. This made his opposition to labor organizations plausible. Then came the logic of idleness, want, starvation. Following this came the ukase, "abandon your organizations or remain idle;" accept such wages as I offer, or starve." Huns, Dagoes, Poles, creatures born slaves, as was expected, submitted, and with them Americans accepted the degradation, and became as servile as the meanest of the debased horde of peons.

To hold them against any future exhibitions of independence, Corbin concocts his insurance scheme. He will bleed his employes to the tune of \$1,000,000. He will manage the fund. God help the poor misguided victims. Disrobed of manhood, and debased to a degree that makes an emancipated African blush, Corbin's cattle are to be regarded as examples of what is in store for labor organizations elsewhere in the country.

It were supreme folly for members of Brotherhoods of railway employes throughout the country to assume that they are out of danger. The Brotherhoods with all their cherished hopes are in danger. Corbin has crushed them, and Corbin is only one of a tribe animated by the same ambitions and ready to employ the same treacherous means.

There is one hope, and only one. It is found in the work of compact organization

and in *federation*. With these things accomplished, perfected, the Brotherhoods shall stand; without them Brotherhoods will disappear. Defrauded, cajoled, divided and disheartened, the corporation devil-fish will grapple them and drag them down, and this accomplished, the corporation insurance bubble will burst, and one word will suffice to write the history of the condition that follows—RUSSIANIZED.

AS INDICATING the smoking capacity of the universal Yankee nation, it is officially stated that "the Internal Revenue Department collected taxes during the month of April on 310,181,466 cigars, while during the same month of the previous year taxes were paid for 305,054,270 cigars, showing an increase of 5,127,196." Supposing the retail price of these cigars was five cents each, the amount which went to smoke would be \$15,509,073, and for twelve months, at the same rate, \$186,108,876. Such figures show pretty conclusively that smoke is more expensive than fire—vastly so, since the amount consumed by smoke is a clear loss, while insurance pays back to the victims of fire about sixty per cent. Suppose we say that a very excellent cottage home can be built with many modern improvements for \$3000, indeed \$2,000 is nearer the mark; in that case, we have 93,054 beautiful homes go up annually in smoke. Suppose that a family of five persons can subsist comfortably on \$1,000 a year; in that case the subsistence of 186,108 families rolls away annually in smoke—beautiful smoke. A great country, this, for smoke.

It is stated that the net earnings of the Southern Pacific, for 1888, amounted to \$15,990,000, equal to six per cent. on an investment of \$266,500,000. The Southern Pacific has 5,578 miles of track. If this costs \$25,000 a mile with equipment, the investment would represent \$139,450,000; hence, the net earnings are equal to 11.4 per cent. on the investment. That ought to be satisfactory.

In the future, it will be the right thing to call livery stables, "horse hotels." The world do move.

LAND.

Mr. Henry George is of the opinion that private property in land is the prolific cause of numberless curses to the human family and a ceaseless menace to modern civilization. He says "the great cause of inequality in the distribution of wealth, is inequality in the ownership of land." To remedy the evils which flow from such a cause, "common ownership of land must be substituted for individual ownership." The change proposed is extreme, though within the realm of the possible, and the author of "Progress and Poverty," is of the opinion that "nothing else will go to the cause of the evil;" in nothing else is there the slightest hope. This, then is the remedy. "We must make land common property." Common property is common ownership, public ownership, or, more properly, Government ownership.

The history of individual or private ownership of land, as also the Government or national ownership of land is an interesting study, because it serves to show the antiquity of ownership. Accepting the Bible as authentic history, it will be found that the first instance of private or individual ownership in land was a grant made by Jehovah Himself to Abraham, the patriarch, A. M. 2086 and B. C. 1918, as follows: "And the Lord said unto Abram, lift up now thine eye, and look from the place where thou art, northward and southward, and eastward and westward; for all the land which thou seest to thee will I give it, and to thy seed forever. Arise, walk through the land in the length of it, and in the breadth of it; for I will give it unto thee." There is no mistaking this language. The grant was absolute. It was, as lawyers say, a conveyance, a cession. The title passed from God, the Creator, to Abram the individual and to his seed. "A few years later, the following is recorded: And He (the Lord) said unto him (Abram), I am the Lord that brought thee out of Ur of the Chaldus to give thee this land to *inherit* it." Here is another form of title that of inheritance, an unquestionable title—a right, a title descendable by law. But it seems that Abram, had some misgivings after all about the title to the inheritance and he investigat-

ed as follows: "And he said, Lord God, whereby shall I know that I shall inherit it?" Abram was finally satisfied and later, in the same day, "the Lord made a covenant with Abram saying: "Unto thy seed have I given this land from the river of Egypt unto the great river, the river Euphrates." This seemed to satisfy the old patriarch. He felt that his title was good as against all other claimants. Time wore on, the name of Abram had been changed to Abraham. Rachel had died, and the husband wanted a sepulcher, a possession, a place to bury his dead wife, and he selected the "cave of Machpetah." He would not accept the land as a gift from the children of Heth nor from Ephron the son of Zobar who owned the cave and after considerable negotiating, Ephron sold Abraham the cave for "four hundred shekels of silver, current money," equal to about \$230. The incident serves to show that in this far away age, thousands of years before the advent of Christ, there was such a thing as the individual ownership of land; that land was bought and sold and titles given very much as at present, and as to the justice of such proceedings, it will be observed, that Jehovah recognized the propriety of the transaction, and that Abraham, who talked with God, insisted upon paying cash down to make sure of a title to so much land as was required for a "burying place," to the field and the trees that were in the field, and the cave. There is therefore no question about the antiquity of titles to land held by individuals, and Henry George, when he proposes to wipe out individual ownership of land, antagonizes a principle of accepted right and justice, at least four thousand years old. But it should not be contended that anything in government is right because of its antiquity, and Mr. George has at least some grounds for demanding the common or national ownership of land. Those who take a lively interest in the theories of Mr. George, a sort of a modern Lycurgus, will derive satisfaction, doubtless, in refreshing their minds upon the Spartan land-laws as introduced by Lycurgus. He found Sparta in a sad condition. The few owned all the land, the greater part of the people were poor. Lycurgus believed by

destroying private ownership in land he would banish from the country envy, fraud, luxury, extreme poverty and excessive wealth. But he did not tax land to bring about his sweeping reform, he persuaded land owners to give up their possessions to the commonwealth that a new division might be made, and all the people live together in a perfect equality. After this Lycurgus divided all the movables, goods and chattels of the people. He then cried down all gold and silver money and introduced iron; the coins being so heavy that it required two oxen to haul \$100. Lycurgus swept along in his pathway of reform like a Kansas cyclone. He required all the people to eat at public tables. The home was banished from Sparta. He believed that children belonged more to the state than to their parents; as a result, as soon as a boy was born the elders of each tribe visited him; if strong, well made, he was ordered to be brought up by the state, otherwise his doom was to perish. All of these things were in the line of reforms and the Delphian god informed Lycurgus, that as long as Sparta observed his laws she would be a glorious and happy city. That Mr. George has the same ideas that influenced Lycurgus, is shown, when he says, as the result of destroying private ownership in land, by taxation, that "there would be a great and increasing surplus revenue from the taxation of land values, for material progress, which would go on with greatly accelerated rapidity, would tend constantly to increase rent. This revenue arising from the common property could be applied to the common benefit, as were the revenues of Sparta. He could establish public baths, museums, libraries, gardens, lecture-rooms, music and dancing halls, theatres, universities, technical schools, shooting galleries, play-grounds, gymnasiums, etc." Isn't that a beautiful picture? a sort of a heaven on earth. Lycurgus thought he had done that for Sparta and was anxious to die when the priestess told him nothing more could be done, to make his countrymen happy and prosperous. But Mr. George sees still more good to be derived from destroying private ownership in land, giving it to the Government to be exclusively taxed. He

says, contemplating the vast surplus revenues to be derived from land, "heat, light, and motive power, as well as water, might be conducted through our streets at public expense, our roads lined with fruit trees, discoverers and inventors rewarded, scientific investigations supported, and in a thousand ways the public revenues made to foster efforts for the public benefit;" and better still, "thieves, swindlers and other classes of criminals" would soon be eliminated from society.

Manifestly, Mr. George would be a modern Lycurgus, and would make the United States another Sparta. Is he visionary? Can anyone read such fanciful, fantastic, utopian and shadowy notions, without realizing that their author is a dreamer, a castle builder in an age of practical ideas?

But we have, in history, another instance of the overthrow of individual ownership in land—that of Egypt, during the seven years' famine. Pharaoh did not tax the land to obtain possession of it, but he got possession of it all except that portion which belonged to the priests. When the years of famine began, the King was ready for business. First, he obtained all the money of his subjects, then all the cattle was transferred to Pharaoh, and finally, all their lands. This done, Joseph, the agent of the King in this business, informed the Egyptians, "Behold I have bought you this day and your land for Pharaoh." Poor, famine cursed creatures, they gave first their money, then their cattle and finally themselves and their lands to the King, and private ownership in land in Egypt ceased, and forever afterwards the King in the way of revenue received "one-fifth" of the product of the land. Mr. George, as a panacea for a thousand or more ills which afflict society, and as a preliminary movement to the advent of the millenium, proposes to make the United States of America like Sparta under Lycurgus, or Egypt, under Pharaoh, and by taxation utterly uproot all individual ownership in land, and so profoundly impressed is Mr. George in the righteousness of his reform ideas that he says "By the time the people of the United States are sufficiently aroused to the *injustice* and *disadvantages* of individual ownership of land,

to induce them to attempt its nationalization, they will be sufficiently aroused to nationalize it in a much more direct way than by purchase. They will not trouble themselves about compensating the proprietors of land." If the policy of Lycurgus is adopted, individual land owners will be persuaded to give up their titles. Pharaoh obtained possession of all the land by purchasing it with bread when a seven year famine raged, but Mr. George anticipates when the people are "sufficiently aroused" to do away with "individual ownership, they will adopt a different method, which is neither persuasion nor purchase, and this done, all the revenues are to be derived from land, and the surplus is to be of such boundless proportions that the Government will be able to adorn the earth until it shall become a paradise. There is to be neither wilderness nor waste places, even deserts will bloom like Edens. The Government will be the LANDLORD and the people, all tenants. Deeds and mortgages will be things of the past. The Government will be parental, and as all will be tenants, an officeholder will claim, with some show of propriety, that he has a sort of a divine right to rule, because there is something that smacks of the divine, when a Government assumes to take care of the people and direct all their ways, as it could do when once the owner of all the land. With an ever increasing revenue, "public baths, museums, libraries, gardens, lecture-rooms, music and dancing halls, theatres, universities, technical schools, shooting-galleries, playgrounds, gymnasiums, etc." would abound, free to all. Then we should have parks, fountains, race courses, shaded avenues, base ball grounds and games without charge. Land would pay all with one tax, the land tax. Mr. George believes crime and criminals would disappear, and that prisons would no more be required. Necessarily, the land tax and the destruction of "individual ownership of land" would reconstruct human nature, and men and women, under the influence of the new regime, would become sublimated creatures and the songs of the "better land" would no longer excite a desire to possess it, for the earth would be good enough. The subject is in-

viting and we may write of it again in the near future.

A GENTLEMAN of leisure, who has a penchant for rare statistics, brings forward the figures showing that from 1852 to 1879, the total cost of all wars was \$19,580,000,000; that 1,958,000 people were killed, at a cost of \$10,000 each. It will occur to the reader that a good deal of striking has been going on in the world, that nations have had grievances, that could not be settled by arbitration, and that a strike was the last resort. This Government during the period named, had to strike at a terrible expense, and the sacrifice of a great many lives, and now, it is getting ready for another strike by expending millions for war ships. It is to be hoped there will be no more strikes, but the part of wisdom is to be ready to defend principle, right and honor.

THE following is going the rounds of the press:

The number of locomotives in the United States, says a railway authority, is now over 29,000, to which Canada and Mexico can add about 3,300, making the total number on the North American continent not far from 32,300. The average number of locomotives per mile of road in the United States is about 5.4.

The average number of locomotives to one hundred miles of railroad as given in Poor's Manual is 22.84, which would give the sum total of locomotives now in the United States at 41,340. It is just as well to be accurate in such matters, as to perpetuate stupid errors.

THERE is a prison near Boston, where the criminals of all grades refuse to obey orders, because they are dissatisfied with their hash. The average prison of the United States, is run upon the principles of a sanitarium or a boarding-school, and the state pays far more attention to its felons than it does to honest men who are trying at pauper wages to rear their children and obey the laws, as become good citizens.

A FLORIDA paper tells a story of a fight between a sparrow and an alligator, in which the plucky little bird made the reptile back out and take water. A suggestive incident which could be read with profit by the firemen on the Reading.

IMPORTANT LESSONS.

In the discussion of labor questions, there is no escape from the consideration of wages, and of late many collateral propositions are forced upon the attention of investigators, as for instance agitation is going forward upon the point made by many, that all work on Sundays, save that of charity, that which is absolutely required, shall be forbidden. Not because of the Sinai command solely, but because man's physical, mental and moral well being demands one day's rest in seven; that one-seventh of a man's life shall be dedicated and consecrated to rest—freedom from toil. Then we have the eight hour question up for debate, not a new topic, but one which for various reasons has lately assumed more importance than has hitherto been accorded it.

As the discussions proceed, the field broadens, and new problems are brought forward for solution. We are confronted with the question of Chinese labor, the "pauper labor" of Europe and "foreign contract" labor, all matters of unquestioned importance and so considered by the Congress of the United States. As we proceed, we find in most of the legislatures of the states that bills are introduced, designed to repeal or modify certain laws which do injustice to labor, and necessarily to laboring men, or, for the enactment of laws, demanded by public opinion to put a final stop to the rulings of courts which have in numerous instances made them odious.

But of all the questions fruitful of discussion and unrest, not one approximates the importance of strikes—strikes in general and great strikes in particular. When a great strike occurs, a great wrong, or a nest of wrongs is disclosed, and when the strike is over, without reference to results, the country is invited to study "the lesson of strikes." The invitation is accepted by a steadily increasing number of students, and from time to time we are presented with reports. This thing of studying the lessons of strikes is immensely beneficial to the country at large, and it is to be hoped that the investigations will proceed, and the more assiduous the students, the better it will be for society at large. Bradstreet reports 679 strikes during the year 1888 involving 211,-

841 employes, a decline from 1887 of 23 per cent. in number of strikes and of 58 per cent. in strikers; against 1886 the decrease in number of strikers is 52 per cent. Higher wages or fewer hours were causes of strikes by 68 per cent. of the strikers in 1888, against 62 in 1887. Trades union questions were behind the strikes of 17 per cent. of the men enrolled in 1888, against 22 per cent. of the year before. Sympathetic strikes almost disappeared last year. About 45 per cent. of those striking were in Pennsylvania in 1888, against 32 per cent. in 1887. Only 38 per cent. of the strikes in 1888, involving 50 per cent. of the whole number who went out, resulted in favor of the employes, against 42 per cent. of the strikes, and 38 per cent. of those involved in 1887. There were 74,837 employes locked out in 1888, against 46,000 in 1887, of whom 82 per cent. were successful. The number of days' labor lost by striking and locked-out employes in 1888 was 7,562,480, against 10,250,921 in 1887. If the labor be placed at \$1.50 per man, the estimated loss of wages to striking and locked-out employes in 1888 would be \$11,343,720, against \$15,380,881 in 1887, a decline of 25 per cent. In favoring the public with such valuable statistics, Bradstreet has afforded great aid to those who desire to study the lesson of strikes. And here, we inquire, what are the lessons taught by

Except in rare instances the lesson taught by a strike is that it occurred because of injustice more or less flagrant to which the strikers were subjected. It follows, logically, that those who study the lessons of strikes should be animated by a desire to learn the cause of strikes, what it is that gives rise to them, brings them into existence, and if this is not done the time devoted to studying the lessons of strikes is thrown away—indeed, worse than thrown away. In the absence of a full understanding of cause the discussion of effects has always been wild, and conclusions unsound and often vicious. Those who are responsible for causes which lead to strikes, seek by every means in their power to obscure them. They resort to every species of subterfuge to evade exposure, not hesitating when the case is desperate, to resort to mean mendacity, anything to delude inves-

tigators, and lead the public to false conclusions—and while practicing their schemes of deception, seek to magnify the effects of strikes, and because disaster follows a strike, their energies are concentrated upon a purpose to convince the public that strikers alone are responsible for any and all inconvenience to which it may be subjected.

It is needless to say, that in the past, those who have perpetrated the wrongs that have been productive of strikes, have been able, in a degree most lamentable, to obscure their iniquitous schemes, and by the use of money, secure the influence of the press to aid them in debauching public opinion. We hear much about the "public heart," the "public conscience," the "public judgment," etc. But the powerful corporations, by the use of money, have ever been able to reach the public ear through the press and thus secure verdicts in their favor. As a general proposition, the public could study the lessons of strikes only through the press, and hence, if the press was less than just, in presenting the facts, if it failed to tell the whole truth or, for any consideration, it distorted facts, the verdict of the public, based upon such perversions of truth, would convict the innocent and permit the guilty to escape merited censure. This is just what has been going on for years past, and as a consequence, the conclusion has been reached, that men who strike are in the wrong or, that the wrong complained of, did not justify the strike.

The great public studies strikes only when inconveniences to the public result—and as a consequence, there are hundreds of strikes in which the great public feels no concern whatever. But a strike by railroad employes, which interferes with transportation at once creates universal anxiety; but this anxiety has no reference to the rights or the wrongs of employes. The great public is selfish to the last degree. It studies the lessons of strikes only as its interests are involved. The great public want trains to run regularly; any obstruction creates unrest, alarm and indignation. The great public does not stop to inquire the reason why the strike occurred, by which transportation was interrupted, and confusion took the place of order, or, if it does in-

quire, it is told by the corporation, that "organized labor, again, with mob blindness and violence is attacking capital." The wires flash the news over the country, the press reproduces the falsehood, a verdict is rendered against the strikers. The redress they sought is denied. The corporation triumphs and workingmen pay the penalty of idleness and the sacrifices incident to idleness.

We have pointed out the way the lessons of strikes are studied by the great majority. But a change is coming in the methods of studying the lessons of strikes. The press is no longer the pliant tool of the corporation. A press devoted to labor interests has been established—and is exerting a mighty influence, and not only the labor press proper, but the political press, without reference to party, in numerous instances, when a strike occurs, seeks to give the public the correct view of the matter. This being the case, the lessons of strikes are likely, at no distant day, to be productive of many and great benefits to society.

Of the 679 strikes in 1888, 464 of them were caused by demands for higher wages or a reduction of hours constituting a day's work. In numerous instances, it is found, that while wages are beggarly low, the number of hours out of twenty-four, men are required to work, is an injustice which all fair minded men admit without controversy. Men who are studying the lessons of strikes for the purpose of finding remedies, discover in low wages and excessive hours devoted to toil, the fruitful cause of the mental and physical wrecks, which everywhere bear testimony that the prosperity about which some people are so boastful is productive of social misery and degradation to a degree well calculated to produce alarm. The strike is therefore simply a protest against a condition of things, which, steadily growing worse, is fraught with danger to the peace and prosperity of society. As a consequence the investigation of strikes is becoming a matter of national importance, and it is becoming clearer every day to men capable of reasoning from cause to effect, that employers who insist upon the minimum of pay and the maximum of hours, are the enemies of society, selfish

and soulless men, who, considering only their own welfare, would fill the land with idleness and crime, if, thereby, they could add to their private fortunes.

If a strike never occurred, if workingmen were so abject, so debased and degenerate, as to accept wrong and insult without protest or resistance, if American workingmen could be reduced to the level of the Chinese, and the lowest order of Italian and Hungarian slaves, capitalists would be serene. The work of degradation would go steadily forward and the workingman's chains would the more securely riveted. But American workingmen will protest, they will agitate, they will strike, and it is because of this manliness, that thinking men, statesmen, philanthropists and economists are called upon to study the lessons of strikes, and the more the lessons are studied the better it is for the strikers.

In all such investigations it is found that workingmen are not the enemies of capital

or of capitalists, but that they simply resist wrongs which if not effectually eradicated, torn up by the roots, will be productive of consequences which no patriot can contemplate with composure. The outlook is full of promise. Throughout the broad land the hosts of labor are coming together. They too are studying the lessons of strikes. They are the students of labor problems. They are measuring and weighing with scientific exactness the opposition that confronts them. The unifying process may be slow, but it is certain. The right men for leaders may not have been found, but they will come. The final outcome is to be federation—not for the aggrandizement of one man, or any set of men—not for office or the emoluments of office, but for the redemption of labor from the thraldoms of unjust and discriminating laws and its emancipation from the degrading domination of corporations. The drift is in that direction and the immediate future is one of hopefulness.

WORDS OF PATRIOTISM.

MINE eyes have seen the glory of the coming of the Lord;
He is trampling out the vintage where the grapes of wrath
are stored;
He hath loosed the fateful lightning of His terrible, swift
sword;

His truth is marching on.

I have seen Him in the watch-fires of a hundred circling camps,
They have builded Him an altar in the evening dews and damps;
I have read His glorious sentence by the dim and flaring lamps;
His day is marching on.

I have read a fiery gospel writ in burnished rows of steel;
"As ye deal with my contemners, so with you my grace shall deal;"
Let the Hero born of woman, crush the serpent with his heel,
Since God is marching on.

He has sounded forth the trumpet that shall never call retreat;
He is sitting out the hearts of men before His judgment seat.
Oh, be swift, my soul, to answer Him, be jubilant, my feet!
Our God is marching on.

In the beauty of the lilies Christ was born across the sea,
With a glory in His bosom that transfigures you and me.
As He died to make men holy, let us die to make men free,
While God is marching on.

—Mrs. Julia Ward Howe.

ESSAYS

NOVEMBER, 1889.

ORTHOGRAPHY.

From reading the complaints made through the columns of the *Magazine* on account of contributors' poor orthography, perhaps outsiders may infer that it only occurs in the correspondence of firemen, but such is not the case. Having had the correction of manuscripts from writers whose educational advantages were exceptionally good, I found very bad spelling, which has led me to believe the cause is due to the erroneous system of instructing pupils while at school, or at least the system which was in vogue when most of our membership were boys learning the rudiments of the English language. The old method of teaching orthography was to assign a lesson with a given number of words, and, of course, the student for the time being could commit the whole of it to memory, but with no aid to learn how to spell. After he was out of school for a period his memory too often proved treacherous, leaving him to feel the mortification of having sent his thoughts, expressed in words, sadly misspelled. In Webster's Unabridged Dictionary there are about 100,000 words, but of this vast number from one to fifteen thousand serve to convey the ideas of both learned and unlearned, and the average speaker or writer uses no more than from three to four thousand words, yet to memorize every letter in its correct order in four thousand words will, if no other means are employed, require an effort which exhausts the patience and perseverance of the ordinary mind. Since written composition is only secondary to speech we should endeavor to find out the best means of improving it, and as spelling is such an important factor I will attempt some hints to those desiring to become correct spellers, but who are at a loss to know how to begin.

Nearly all the words in the English language are of Anglo-Saxon, Latin and French-Latin origin, but the Hebrew, Italian, Spanish, Hollandish, Portuguese, Scandinavian, Indian, Celtic, Polynesian, Hindustani, Turkish, Malay, Chinese, Persian and Arabic languages, together with words coined by individuals, which become attached to important subjects, may be found all through it, which is one of the reasons that to learn to spell correctly is so difficult.

There are two classes of words, primitive and derivative. A primitive word is one in the simplest form; as, shine. A deriva-

tive word is a simple word with either a prefix or a suffix added to it; as, shining. Prefixing means adding a syllable or word before a primitive word or root; as, immovable. Suffixing means adding a syllable or syllables after a primitive word or root; as, exact-ly.

Now the important part in using the prefixes and suffixes is to know what letters to drop and the ones to double.

RULES.

1. When a primitive word ends with the vowel e and a suffix is added beginning with a vowel, drop the e of the primitive word: Ex., Agitat (e) ing, lov (e) ing.

2. When a primitive word ends in e and a suffix begins with a non vowel the e is generally retained: Ex., sore-ly, love-ly

3. A primitive word ending in y, and preceded by a consonant, usually has the y changed to i, on taking a suffix: Ex., happ(y) ily.

4. Words of two syllables and words accented on the last syllable, when ending in a consonant and preceded by a vowel or by a vowel after qu usually double the last letter of the primitive word: Ex., quit-ting, red-dish.

5. Words ending in l and having the suffix ly added, always double the l's.

6. In all words which begin with q the letter u always follows.

To rules one, two, three and four of course there are exceptions. In rule 1 most words ending in ce or ge retain the e when a suffix is added commencing with a or o: Ex., outrage-ous, peace-able; also words ending in æ retain the e in order that the sound of the primitive word may not be changed: Ex., shoe ing; and sometimes e is omitted when it is preceded by a vowel: as in, wholly, duly, truly,

The exceptions to rule 2 being when a suffix is added commencing with ing the y of the primitive word is retained: Ex., dying, replying, also y final is sometimes changed into e as, is beaut(y)eous, dut(y)eous. In the other rules the exception occurs very seldom and mistakes are less apt to be made by the writer.

To use a dictionary to the best advantage the student should first learn to understand all the diacritical marks, so that no doubt would exist about the proper pronunciation of any word, then he should carefully study the meaning of different words having like pronunciation and spelled differently; for example, wright, right, write and rite, all of which have very different meanings and are often incorrectly used by writers. Also the dictionary will show the student at a glance the language from which any word was taken, together with its part of speech, if he will only first learn the abbreviations which each word is marked with for that purpose.

TERRACE, UTAH.

J. H. MURPHY.

Mechanical

Letters and Papers pertaining to Locomotive running, firing and management and other topics of interest to locomotive engineers and firemen are solicited for this department.

Correspondents are required in all cases to give their real names, not for publication necessarily, but as a guarantee of good faith.

Communications should be plainly written on one side of the paper only, and as brief as possible. No matter should be introduced for illustration or otherwise that does not have a bearing, directly or remotely upon topics of a mechanical character.

Contributions to this departments should reach the Editor not later than the eighth day of each month to insure publication in the next ensuing number, and should be addressed to

MECHANICAL DEPARTMENT,
Locomotive Firemen's Magazine,
TERRE HAUTE IND.

NOVEMBER, 1889.

Review of October.

The October *Magazine* is at hand, and so much space is given to the discussion of the "Hammer-blows," that in spite of past resolutions, I cannot resist the temptation of putting in a word, in the form of a query, which presents itself to me, and which if properly answered by "Mr. Lockwood" would enable him to "cross his power-lines on the central parallel lines, and not above them," as "Eccentric" has called attention to. Let us suppose that a very large railroad were built on this earth, its direction being north and south. Now let us suppose a correspondingly gigantic Shaw Locomotive were placed on the rails, and that we had an immense drag-rope, by which the locomotive was attached to the North Star. Please bear in mind that Astronomy teaches us that said star is far greater than this world of ours, and would form a fixed support for our rope attachment. Now, having securely fastened our locomotive, suppose that we give her steam, and that her weight were enough to make her grip the rail without slipping, and that she had power enough to turn her wheels. Now, what would be the result? The only answer to be given would be, that the world would turn toward the north, and cities and towns would come up from the south and pass by the locomotive. If I understand "Mr. Lockwood" correctly, he admits that the power-lines would then cross on the center line, and establish not only a practical but a theoretical balance, which even the drawings would show. Is this cor-

rect, "Mr. Lockwood"? Now, how is the action of the wheels in relation to the machine changed if the rope were cut and the locomotive, instead of drawing the world around to it, drew itself around the world? I cannot see that there is any change whatever in the relation of these parts, and cannot see how "Mr. Lockwood" can find any ground to claim that there is such a change, even when we reduce the size of the machines and make them so small that instead of turning the world over, they run over the world. One more point: Artemus Ward was an enthusiastic Union man, and declared "that the rebellion must be subdued, even if he should be obliged to shed every drop of blood in his—able bodied relations." Even so, "Mr. Lockwood" now solicits subscriptions from the railroad companies to build a machine to convince them that the "Shaw" is the only really perfect locomotive ever designed, instead of at once securing fame and fortune by building a dynamometer, and inviting other makers to run their machines over it to the scrap heap.

KINDERGARTEN
MECHANICS.

"Eccentric" has an amusing account of a discussion among the "boys" on this topic, and starts out with a false definition of the word, and as there are several more misleading statements following, I hope he will pardon this correction. Kindergarten literally translated is Children's Garden, and was applied to infant schools in the old country. As infants cannot be interested in receiving instruction by any other means, object lessons were introduced, and soon became a leading feature of these schools, and in so far "Eccentric" is correct. Now, Jim says, "Call my dinner-pail a circle or cylinder," and uses the terms as if they were the same.

SQUARING
CIRCLES.

The bottom of the pail is a circle; the sides are a cylinder. Now, according to "Eccentric," they measured the height of the pail and its circumference, and it produced "a sheet four and three quarters by twelve and seven-eighths ($4\frac{3}{4} \times 12\frac{7}{8}$) inches." This is really a square, and has no elements of a circle in its first form, except that it was bent in the shape of a circle, and thus became a cylinder. The building of a square pail with a piece of tin containing the same area, and finding that the round pail held the most, only proves that a cylindrical vessel will hold more than a square one, having the same area of surface in its sides, but bears no relation to the decimals, $\frac{7}{10000}$, to which "Eccentric" refers. It does not appear from "Eccentric's" article that the bottom of the pail (the circle) was measured at all, but taking the given length of the side ($12\frac{7}{8}$) it appears that the diameter was a little over $4\frac{1}{8}$ of an inch. Now, we have said that a square was larger than a circle having the diameter of the side of the

square, and the problem of the pail will prove it, too. The pail under consideration by "Eccentric" (by the bye, what kind of feeders are the boys in that section, for I find an ordinary quart-can measures 4 inches in diameter and is $4\frac{1}{2}$ inches high?) being $4\frac{1}{8}$ inches in diameter, would not hold as much as a square one $4\frac{1}{8}$ on each side, and again, it would take $16\frac{1}{2}$ inches long of material for its sides, instead of $12\frac{1}{2}$, as before. But the sides of a pail are never cut to a circle, and ever form squares in calculating; it being only the bottoms and tops of pails or ends of cylinders which are circles, and to which the decimal 7854 is applied.

"Mr. Rauch" gives a full explanation of how the decimal 7854 came to be used, and shows how it is applicable to circles of any size.

"W. L." says his engine slips without using steam on down grades. As it ever takes power to overcome the adhesion, and as "W. L." says the power is shut off, it does not seem as if there could be a slipping of the wheels under those circumstances, but as "W. L." says it does happen, we hope he will investigate and give us further particulars in regard to his unique experience.

"Dirigo" is certainly right in his remarks on Mr. Prouts article in *Scribner's*, for it is liable to do more damage to a locomotive, to leave the throttle closed when reversed, than it would be to open it. When be bear in mind the fact, that in reversing we transform the engine into an air pump, which forces air into the steam chest and pipe, and compresses it more with every stroke of the piston, it is evident that by the opening of the throttle, we furnish a relief to the overcharged chest and pipes, and admit the pressure to the boiler, which has a chance to obtain relief through its pop and safety valves, and thus prevent excessive strain on any part. It has been noticed by engineers, that when they were obliged to reverse and opened the throttle, the boiler pressure rapidly increased, and the engine would soon be popping off. This of course was the result of the air forced into the boiler, and proves that air pressure is just as effective for power as steam, if it can be kept up.

A few years ago I was hostler, and among the locomotives we had a number whose injectors were in bad shape, and which we had to take out and run up and down a convenient side track to pump them up. We had one of these out one day, and by pumping her up had so reduced the pressure, that we could not run up a small grade to the turn-table. We got another locomotive, and by towing the other one with her lever in reverse gear and throt-

tle open, a very short distance, (not over 200 feet) we got enough pressure to get on to the turn-table, and into the round house, giving us a practical exhibition of a theory, but if we had lacked theory, we would not have been able to practice what we had never seen done. This makes me believe in theory, but theory should be confirmed by practice, but if approved practice fails to confirm theory it must be wrong.

"A. T. P." writes to call attention to the difference between foaming and priming, and admits that they are "something alike," and in actual practice it will be hard to tell the difference, because both will cause an unusual height of water and an overflow of it with the steam. While a washing out, or a discharge of the floating oil or dirt, by a suitable valve at the top of the boiler, will cure foaming, priming may require more radical means, either of reconstruction of boiler or cylinders to proportion. Many locomotives, particularly of the older style, which as a rule were lighter and smaller than the present, are required to haul just as many cars and do just as much work as the newer and larger machines, and being thus overtaxed, show a constant tendency to prime and raise their water, and it is only by the utmost vigilance, that the engineer is able to maintain his mastery over the water supply, and have it high enough for safety, and not too high to work water.

Vulcan.

ARGENTA, ARK., Sept. 20, 1889.

MR EDITOR:—I sent you an article a few days ago, and intended to send a question or two that I would like to have you or some of your readers answer.

If a car, 35 feet long; weight, 30,000 pounds; load, 40,000 pounds; total weight, 70,000, will start under the action of the force of gravity on a gradient of 18 feet per mile:

1st. How many pounds attached to the end of a rope passing over a pulley and being free to descend under the action of gravity, the other end of the rope being fastened to the car, will start the car on a smooth and level track? Count no friction for rope and pulley.

2d. Will this force, starting on a level, be equal to the force of gravity starting it down a gradient of 18 feet per mile?

3d. And will twice the force that starts it on a level start the same load up a gradient of 18 feet per mile?

4th. Will the force that starts the load in any of the above conditions be sufficient to keep the load moving at the rate of $2\frac{1}{2}$ miles per hour, or would it require a force either greater or less, and how much?

Will you or some of your readers please answer the above questions and oblige your friend,

L. A. Wilson.

Theory vs. Practice.

Take up my paper treating on mechanics and you will find lots of theory. Again, go among mechanics and see and talk with them and you will hear them talk practice. This would look as if theory were in conflict with practice, or against it, as we have captioned this article, but let us see whether this is so, and in order to more fully get at the point let me relate a little personal history. Years ago, I fired for a man who said he did not believe in books; they could not do him any good, the company did not require him to know it all, that he knew how to stop and start, and to draw a hundred dollars a month for it. Now let us see why books did him no good. During the campaign previous to General Garfield's election this engineer had a number of animated discussions with the conductor, who was as strong a Democrat as the engineer was a Republican. As I did not appear to take sides with either, but would occasionally call attention to weak points on both sides, the engineer plainly asked me what I was. I told him I was a "Neal Dow man." Some time after my engineer told the conductor in my presence that his fireman believed in "kneeling down," and I answered "That both parties were so corrupt that prayer would not hurt them," but it took me some weeks to find out that my declaration for Neal Dow had been misunderstood for "kneeling down," and yet this engineer was a daily reader of the *Sun*, and nearly every copy contained paragraphs in relation to Gen. Dow and his campaign against the other two Generals, Garfield and Hancock. *A daily reader of the Sun!* and after I found out his mistake it was news to him that there were three Generals running for the office of President, and that one was named Dow! How much good did reading the *Sun* do this man? and on a like assumption, how much good would he derive from reading a book? The answer is obvious, and justifies the expression used by a dispatcher to this engineer, that the "only engine he ought to run was one with one wheel and two handles." As long as I could keep lots of coal in the fire-box to suit his method of running, and have the maximum pressure he was all right, but if it required a little economy of steam or water to get along it was not so good. This is the very point where practice runners get left unless they have recourse to theory obtained either from books or learned from others. I have compared some engineers to sons of wealthy families who go to housekeeping and have their parents foot all the bills. Of course they can live high and get along nicely because they have plenty of money to back them. But let a young couple go to housekeeping without having much ahead, and dependent upon their own earnings to make ends meet, and it often becomes a matter of study

how to spend money to the best advantage, and obtain the best results from the least expenditure. This is especially so of running a locomotive; if you are fortunate to be blessed with a good steamer, or a good fireman who can get steam out of anything, it does not matter how much you waste so far as your making time is concerned, for the engine, aided by the "boy," will supply you plenty more. But when "she won't steam," and "the boy can't keep her hot," the time has come to try your attainments and to practice economy and try to make a little go a great ways. But even with the freest steamers a systematic, careful management will result in great saving of fuel and labor, and it should ever be the aim of all not to see how much they could use, but with how little they could do satisfactory work. To do this will require a theory that certain causes produce certain effects, and will ever do so. Theories are not fancies, but are based on facts. For instance we hear that ice floats in or on water, and from this we reason that ice is lighter than an equal bulk of water. This is theory. When a cubic foot of water is weighed we find it weighs 62½ pounds, while a cubic foot of ice weighs but about 40 pounds. This is theory based on facts and proven by practice. Every theory has facts as a basis to build on or it fails to be a theory and dwindles down to guess work. So far from theory being against practice they should be combined, and if a man takes up the management of a locomotive it will in no wise unfit him for the business if he has a few simple theories such as the multiplication table, the properties and different points of levers, the expansive qualities of steam, the combustion of fuel and the laws which govern it, for if he has these to start with he will have less difficulty to become a practical man than one who has to learn all these things by the slow process of a personal experience, particularly when the avenues to learning are often hedged in by persons who are afraid that if knowledge be too easily accessible, everybody will know as much as they do, and thus destroy their self conceit. How often do you hear of this one or that one knowing all about a locomotive, but that they would not tell a thing and think that no information of any kind ought to be published, because it would then be public property, and any one could use it. The cry of "Theory" seems to come from those who have no theory, but have adopted railroad service, not from any natural bias or choice, and have thus no interest in it further than to make the most money for the least work. A man interested in the work will not be very long without a theory of what is right or a safe practice, so when the two are united we have the best practical man, because his theory enables him to give reasons for his practice, and his practice confirms his theory.

Rules for Calculating Horse-Power of Steam Engines.

And What is Horse-Power?

MR. EDITOR:—"Vulcan," in the June number of the *Magazine*, page 597, gives a short rule of R. Cunningham's for calculating horse-power of steam engines with steam pressure 100, speed 100 revolutions per minute. Rule: "Multiply the diameter of cylinder in inches by the stroke in inches, and divide by four." Example: "Cylinder six inches, stroke six inches," (unusual dimensions for an engine, yet a few have been built in that way.) Then $6 \times 6 \div 4 = 9$ horse-power. Now, "Vulcan" says, "if the speed was 200 per minute the power would be double; if 300 it would triple the horse-power, and if the pressure was 50 it would only be $4\frac{1}{2}$ horse-power, etc.," and says it would be a satisfaction to know if it was correct: He will be a good deal older before he does know that it is correct. Suppose our engine instead of being $6'' \times 6''$, was $6'' \times 8''$, a more usual style of build; then $6 \times 8 \div 4 = 12$ horse-power, considerable gain by adding two inches to the length of the cylinder. Again, suppose we take a fancy to make the cylinder 24 inches. Then $6 \times 24 \div 4 = 36$ horse-power. If this is a rule why make the diameters of your cylinders so large? If you want a stronger engine increase the length. But the days of long engines have gone glimmering. And so with the rule. Let us next examine R. Grimshaw's new rules for calculating *net* horse-power of steam engines. Rule: "Multiply the mean effective pressure in pounds per square inch by double the piston speed in feet, and by the square of the piston diameter in inches, point off five places from the right." Example: "Engine $10'' \times 12''$ at 200 turns per minute, 50 pounds of mean effective pressure gives $50 \times 800 \times 100 = 4,000,000$, and the net horse-power is therefore 40. He says "the gross horse-power is $\frac{50 \times 78.54 \times 400}{33,000} = 47.6$," and to get the *net* you "must subtract 16 per cent for friction." This rule, then, for gross horse power is, multiply the mean effective pressure by area of piston-head, and by the piston velocity in feet, and divide by 33,000. He gives another rule that produces the same result; he has also completed a table for the different mean effective pressures and different piston speeds, up to 700 feet. These rules, as well as all others that I have ever seen, are very unsatisfactory to me, as I will show further on. But to have a base for comparison I will quote "A Philadelphian's" rule as given in the *B. of L. F. Magazine*, page 510, where he says, "I shall try to describe *actual* horse-power." Rule: "Multiply the area of the cylinder in inches by the pressure per square inch in the cylinder; mul-

tiple this product by the number of revolutions per minute, this again by twice the length of the stroke in feet, then the product by two, (because there are two engines on locomotives) and finally divide by 33,000." Then he gives an example. But this is Grimshaw's rule for gross horse-power a little differently expressed. Therefore Grimshaw's gross horse power is "A Philadelphian's" actual horse-power. Does gross and actual mean the same thing? Webster says "Actual is real, in opposition to speculative, or existing in theory only." Gross, "The whole; entire; as opposed to a sum consisting of separate parts." Now, if each understand the words actual and gross to mean the whole amount in contradistinction to Grimshaw's subtracting 16 per cent. for friction, or anything else, their rules are identical for the whole force or dynamic power. But note carefully what "A Philadelphian" says: "The maximum pressure is supposed to be as near as possible two-thirds of the boiler pressure," and puts it in his example at 80 pounds, hence the boiler pressure would be 120 pounds. Do you believe he gets a maximum pressure of 80 pounds? I don't. Grimshaw, in his example, puts the mean effective pressure at 50 pounds, but says nothing about boiler pressure. Do they mean the same thing by maximum pressure and mean effective pressure? By exchanging their rules to the other's example they must mean the same. Why the rules are not satisfactory to me is, first: Because they *suppose* they have so much pressure when my suppose is they don't have it. Mr. Church, an engine builder of New York, in answer to a question of mine, "What was the average pressure on the piston-head throughout the stroke?" said engine builders had agreed to call it 40 pounds. Notice, he did not say it *was* 40 pounds. Now, if they know as much as they pretend to, why do they use such words as "supposed" and "agreed?" They would like to have us believe they know all about steam and steam engines, but by the time we get through with them you will admit there are some things they have not told us. Another objection to the rules for estimating horse-power of engines is the use of 33,000 pounds as the basis of a horse-power, for it is a misnomer and therefore leads into error, and if we start on a false premise we never can arrive at a correct conclusion. Again, in the rules, the power or force should be estimated as applied to the wrist pin, the first turning point or lever end that is touched by the force to overcome resistance or do work. Thirty-three thousand pounds is not a horse-power, but the amount of work that a horse is supposed to be capable of doing in one minute's time. But as it is used in all philosophies and in all rules in calculating horse-power,

it carries with it to the ordinary mind, and perhaps to the mind of the philosophers themselves, the idea that the horse exerts this amount of force as a constant pull. Now what rational idea can any of you give of a horse raising 33,000 pounds one foot a minute, or any other period of time which is equivalent to a horse power? This brings us to the second part, the question

WHAT IS A HORSE-POWER?

Therefore I will proceed to give you my definition: All powers, or rather forces, used in operating machinery are in terms of horse-power, as a unit of measure of dynamic effect, therefore we should fully understand what it means. It is said to be 33,000 pounds raised one foot in one minute. Here the units of measure are pound, foot, minute; the time and space are in terms of unity, and a sufficient number of pounds to designate the force given by a horse.

How can a horse raise 33,000 pounds one foot in a minute? If a horse travels $2\frac{1}{2}$ miles in one hour, he moves 220 feet per minute; hence the proportion, 220 feet: 1 foot:: 33,000 pounds: 150 pounds. Then one hundred and fifty pounds is the tension on a rope by which a horse may pull to raise 150 pounds 220 feet high in one minute; which is equivalent to raising 33,000 pounds one foot high, for $150 \times 220 = 33,000$. Suppose we have a tower 220 feet high, on top of which there is a pulley, and one at the bottom. Now pass a rope over the top pulley and under the bottom one, to the end of the rope passing under the bottom pulley attach a horse, and to the other end of the rope fasten a weight of 150 pounds. Now drive the horse out from the bottom of the tower a distance of 220 feet in one minute, and the weight will have ascended 220 feet in the same time, and the work done is equivalent to raising 33,000 pounds one foot, for work is the weight multiplied by the height through which it has been raised.

Friction and small fractions will be omitted in this paper. If the horse is two minutes in going 230 feet, the same amount of work is done, but has taken twice as long to perform it, consequently it is only the work of $\frac{1}{2}$ horse-power in one minute. But if the horse goes 220 feet in half a minute, still the same amount of work is done, but it required only half the time; therefore does the work of two horses per minute. Again if the horse travels 220 feet in half a minute or 440 feet in one minute, the weight to raise 440 feet is 74 pounds, for $440 \times 75 = 33,000$. Hence from the laws of motion, as the velocity increases, the weight diminishes, and vice versa, for an equivalent amount of work in the same time.

The average speed of a draft horse is estimated to be about $2\frac{1}{2}$ miles per hour; then the tension on the tugs or traces by which

he pulls is on an average 150 pounds. Therefore 150 pounds is the unit or measure of a horse power as a constant pull. And this is the number that should be used instead of 33,000 in the rules estimating the powers of steam engines. For what we want to know is the force exerted as a constant pull, not the power that may be stored up either in the horse or machine.

Again, let us attach 150 pounds to each end of the rope passing over the pulley on the tower, one weight being at the top, the other at the bottom, then the weights are held in equilibrium. Suppose further that there is no friction in the machinery, or that a force just sufficient to overcome the friction when the weight is moving 220 feet per minute, the weights are still in equilibrium, but now the smallest amount of force imaginable applied in the direction either up or down, would cause the one to descend and the other to ascend; hence we have a horse power, or a force equivalent to that produced by a horse in motion, in terms of a moving body. Then let us examine some of the laws as laid down in the books, governing moving bodies, and apply them to a horse in motion and see if our conclusions are correct. Prof. Dana in his work on mechanics, says: "The value of a moving force as a constant pull or push is the product of the mass into the acceleration of gravity and velocity in feet per second," and deduces the equation. "The force is equal to the weight, divided by the acceleration of gravity ($32\frac{1}{2}$), and the quotient multiplied by the velocity." (In seconds of time and feet in space). But the weight of a body divided by the acceleration of gravity is the mass; and the mass multiplied by the velocity is the momentum of a moving body. Hence the momentum of a moving body is equal to a moving force and vice versa. Formula: Let W be the weight, G acceleration of gravity, T the time in seconds, V velocity in feet, F the force. Then $\frac{W}{G} T, V = F$. Now let T be unity and the formula is $\frac{W}{G} V = F$. Example: Let W = 96 G = 32, (omitting the fraction $\frac{1}{2}$) V = 40 feet per second, to find the value of F. Then $\frac{96}{32} \times 40 = F = 120$ pounds of force or work. "But time and velocity are implicitly implied in doing work, for space involves both. If the space be passed over with a constant velocity, then the space is equal to the velocity multiplied by the time. But work is equal the force multiplied by the space, and if the time is unity the work is equal the force multiplied by the velocity; but this work is done by a moving force as a constant pull or push. Therefore is equal the mass multiplied by the velocity, equal the momentum of a moving body. But there is another force in all moving bodies, called kinetic energy, *vis viva* or liv-

ing force. This is also work, and this work is equal the weight multiplied by the height—not the space—which is equivalent to one-half the mass multiplied by the square of the velocity. Let us take the example used to find the constant pull, and see what is the kinetic energy, or striking force. Then $\frac{96}{32 \times 2} \times (40)^2 = K = 2400$ pounds of force, or all the force that is stored up in the body moving with that velocity. To illustrate: The work of a constant pull is a train moving safely to its destination. The work of kinetic energy, or striking force, is the work of a collision; bringing the whole force to a stand still. Now let us apply the above laws to the horse when he is moving doing work. He has weight and that weight is in motion, or moving; also he has a living force within himself whereby he can put his body in motion and keep it moving. This is kinetic energy or *vis viva* of his body. But it is not the constant pull or momentum. Now take our preceding formula, and find his momentum or constant pull. Suppose the horse weighs 1,280 pounds, his velocity is 220 feet per minute, which is $3\frac{2}{3}$ per second. Then $\frac{1,280}{32} \times 3\frac{2}{3}^2 = 146\frac{2}{3}$ pounds the constant pull or momentum of a horse of 1,280 pounds. Then it takes a little larger horse than that to give a constant pull of 150 pounds. You may force a smaller horse to do that much work, but then he is drawing so much from his kinetic energy, which would soon wear out.

Now, Mr. Editor, I hope I have made myself clear as to what constitutes a horse power, although there may not be enough left of this old 33,000 horse to make a Shetland pony. And I think it will be apparent to every reader, why the rules given us for estimating the horse-power of steam engines are unsatisfactory, since the division should be changed from 33,000 to 150, there must be a corresponding change in the dividend to make the engine do what they have "proposed" or "agreed" it shall do. Let the rule makers begin to study how they "propose" to change the dividend, and what they "agree" it shall be. For if this meets with a favorable reception in the *B. of L. F. Magazine*, so that what I may have to say on the subject of steam may be understood. And after I get through with that subject, you will hardly find enough of steam to blow the whistle.

Now, Mr. Editor, I am not a B. of L. F. nor a B. of L. E., but wear the title of M. D. Now should this hinder me from writing some philosophy.

L. A. Wilson.

ARGENTA, ARK., September 27, 1889.

THE Birmingham Railway Supply Co. has closed a contract with the Birmingham, Powderly & Bessemer Railroad, to furnish it with five passenger cars.

Does 5x13=64?

C. B. Roslindale, Mass., has sent us a sketch of a rectangle, 5x13 inches, and states that in cutting the rectangle through one of its diagonals, thus forming two triangles whose altitude is 13 inches and base 5 inches, and again cutting each triangle at 5 inches from the base and parallel to it, the four pieces can then be put together so as to form a polygon 8 inches square. Now since the area of a rectangle 5x13 is 65, and that of the square is only 64 square inches, our correspondent wishes to know what becomes of the one inch of difference in the two areas. A.—The pieces obtained by cutting a rectangle in the manner here stated will not form a perfect square: the area will always be 65 square inches, no matter in what manner the pieces are put together.

By the above query and answer from a recent number of the *American Machinist*, it appears that the query has puzzled others besides Mr. Rauch, who introduced it in the *Magazine* some time ago. It would seem that the question of placing 65 square inches, so as to cover only 64 square inches, would need no demonstration to find an answer, for it is evident that 65 square inches will ever cover 65 square inches, unless the material be subject to and liable to compression, which is not supposed to be the case in the problem. A rectangle 5x13, cut through one of its diagonals, would form two triangles, each 13 inches long and tapering from 5 inches at its wide end to a point at the other. These triangles are supposed to be cut 5 inches from the large end, leaving the points 8 inches long. Now according to the rule of three: If at 13 inches the triangle is 5 inches wide how wide is it at 8 inches? Multiply the last two (8×5) and we have 40 which divided by the first (13) gives $3\frac{1}{3}$ inches as the width at the cut. In order to form a square of the pieces they must be joined as below, which is $\frac{1}{2}$ size.

The pieces 1 and 2 are 5 inches at the wide end, and $3\frac{1}{3}$ at the other, and when joined will form a square 5 by $8\frac{1}{3}$ inches,

thus $\frac{1}{8}$ of an inch longer, and accounting for $\frac{1}{8}$ of an inch at the side marked *A*. The points 3 and 4 will also measure $3\frac{1}{8}$ inches at the wide end, and when joined will form a square $3\frac{1}{8}$ by 8 inches, and when placed with the square formed by 1 and 2 will project $\frac{1}{8}$ of an inch beyond the 8 inch limit, all along the side *B* as indicated by the double line. This accounts for $\frac{1}{8}$ and when the $\frac{1}{8}$ at *A* are added accounts for the missing (?) inch.

SEHONIE, W. T., September 23, 1889.

MR. EDITOR:—Will Vulcan please state through the columns of the *Magazine* how he measures the corners of a square outside of the circle, as he speaks of in his rule for squaring a circle, and oblige

Yours truly,
Martin Lorson.

The First Steamboat.

The idea of steam navigation, or at all events of navigation by mechanical means, seems even to have presented itself to Roger Bacon, for he made the following remarkable prophecy: "We will be able to construct machines which will propel large ships with greater speed than a whole garrison of rowers, and which will only need one pilot to direct them; we will be able to propel carriages with incredible speed without the assistance of any animal; and we will be able to make machines which by means of wings will enable us to fly into the air like birds." We may safely say that we have attained to the first two prophecies of Bacon, but, with regard to the third, I think the idea of aerial navigation by mechanical means is now very much in the same position as that of steam navigation before Symington produced his *Charlotte Dundas*. We want a man to put it into a practical shape. In this sense Symington was the inventor of steam navigation; he put theories into practice, and embodied in a patent taken out in 1801 the arrangements that are still in use at the present day in paddle wheel propulsion.

Symington was born at Leadhills, in Lanarkshire, in 1764, and though educated for the ministry, he showed an early talent for mechanical pursuits, which he eventually followed. In 1786 he made a model of a steam carriage which he had invented, and exhibited it to the professors of Edinburgh University. Among others who saw this model was Mr. Patrick Miller, of Dalswinton, a wealthy gentleman who had experimented in naval architecture and the propulsion of small vessels by means of paddle wheels driven by manual labor. Mr. Miller was much taken with Symington's invention, and approved of his suggestion to substitute the steam engine for manual labor in driving his vessels. An agreement to make an experiment at Mr. Miller's expense, was accordingly come to, and in 1788, after one of Mr. Miller's experimental boats had been fitted with Symington's patent engine, the first successful experiment in steam navigation was performed on Dalswinton Loch, the little boat attaining a speed of something like four miles an hour. The experiment was repeated on a larger scale in 1790 on the Forth and Clyde Canal, the engine used being Symington's patent, with ratchet wheels and chains for converting the reciprocating motion of the pistons into rotary motion, on the same principle as adopted in the Dalswinton experiment, but on a larger scale, the two cylinders in the first case having been each four inches in diameter by eighteen inches stroke, and in the second eighteen inches by three feet stroke. Neither of these vessels was of any practical value, how-

ever, beyond having demonstrated that a steam engine could be safely applied to propel a vessel; and after the 1789 experiment Mr. Miller unfortunately abandoned steam navigation altogether.

Symington returned to his occupation as a civil engineer, but still nursed the idea of introducing steam navigation, and in 1801 he found a worthy patron in Lord Dundas, of Kerse, near Grangemouth. Under his patronage he produced the *Charlotte Dundas*, designed for towing vessels on the canal, in order to do away with horses for that purpose; and this vessel, which was at work on the Forth and Clyde Canal from 1801 to 1813, has earned the well-merited distinction of having been *the first practical steamer*. In this vessel Symington abandoned his old style of engine, and adopted the crank and connecting rod for producing rotary motion of the paddle wheel. The *Charlotte Dundas* was built at Grangemouth by Alexander Hart, in 1801. She was 56 feet long, 18 feet beam, and 8 feet deep. She had a paddle wheel at the stern. The cylinder, which was 22 inches diameter by 4 feet stroke, lay horizontally on the deck, and the piston rod was coupled direct by a connecting rod to a crank upon the paddle shaft. The vessel obtained a speed of about 6 or 7 miles an hour upon the canal, and towed upon one occasion two fully laden sloops—the *Active* and *Euphemia*—each about 70 tons burden, from Wynford to Port Dundas, a distance of 19½ miles, in six hours against a strong head wind. The wash from the paddle wheel, however, had a tendency to destroy the banks of the canal, and Symington was interrupted from using his steam vessel on the Forth and Clyde canal. Previous to this interdict the Duke of Bridgewater, having heard of the success of Symington's steamer, gave him an order for eight similar boats for the Bridgewater canal; but unfortunately for Symington, on the very day on which he received the notice of interdict from the manager of the Forth and Clyde canal, he also received the intelligence of the Duke of Bridgewater's death, and the order for the eight steamers was never executed.

From these disappointments, combined with the pecuniary losses which Symington suffered by his experiments, he never quite recovered. He died in London an impoverished man in 1831, and was buried in the churchyard of St. Botolph, Aldgate, London. Not even a simple stone marks his grave!—and yet this man produced the "patent boat" of paddle wheel steamers, and got up steam specially for the great Robert Fulton in July of 1801, in order that he might treat him to a sail of four miles along the canal and back again in an hour and twenty minutes—six years before Fulton ever produced a steamer in America, and eleven years before Henry Bell (who frequently saw and inspected the *Charlotte Dundas*) produced his *Comet* on the Clyde. Neither of the steamers which these two men produced was so complete in its mechanical arrangements as the *Charlotte Dundas*, and instead of being improvements upon Symington's ideas, they were rather the reverse, for in them small engines were geared up to drive the paddles, whereas Symington's plan was the bold, simple, and straightforward one that is in use to-day in some of the swiftest paddle steamers on the Clyde, viz., the large cylinder acting direct upon the crank on the paddle shaft.—*The Steamship*.

The Northern Pacific & Manitoba Railroad has prepared plans and specifications for extensive building operations in the woods at Winnipeg, Man. A roundhouse of brick, with stone foundation, 270 ft. in diameter and 720 ft. in circumference, is to be built. Among other buildings to be erected will be a car repairing shop, 240x100 ft., solid brick with stone foundation, a blacksmith shop, 100x60 ft., and a two-story brick store building, 70x40 ft., with offices attached. The work will be pushed through as rapidly as possible as soon as the contracts are awarded. Oil tanks, pumps, etc., are to be put up.

Automatic Brakes.

The automatic brake used on most of the railroads is a very mysterious machine to a large share of travelers as well as the public generally. Ask one of them to explain how he thinks it works and most men will say, "I give it up, but it is a great invention." The brake was invented some fifteen years ago, and has been on the road to perfection ever since, as the long list of patents, over thirty in number, will show. Besides the patents on the automatic feature alone, there are nearly 100 more on the air pumps, brake valve for the engine, the hose couplings, etc. The principle on which it works is the same now as at first. There is an air pump on the engine which is steadily at work compressing air and keeping a large reservoir full at a pressure of about seventy pounds to the square inch. A pipe from this reservoir leads up in the cab of the engine to the brake valve, and from there back under the tender and every car in the train.

The connections between the cars are made with rubber hose and suitable couplings that can be taken apart or coupled up when the cars are made up into a train and when the cars are uncoupled accidentally, the hose couplings pull apart without damage. Under each car is a small reservoir called the "auxiliary reservoir," which is connected to the air pipe and is charged with air from the main reservoir. There is also a brake cylinder and piston, which, when the air enters the cylinder forces the piston out, sets the brake shoes against the wheels and stops the train in the same manner as the old hand brakes, but with much greater effect. It is the compressed air in the auxiliary reservoir under each car which sets the brake and it is admitted by an ingenious piece of mechanism called the "triple valve," which is used to connect the air pipe from the engine, the brake cylinder and the auxiliary reservoir together. Now when the engineer wishes to set the brake he lets the air out of the train pipe through the brake valve in his cab, and the triple valve under the car then opens and lets the air from the auxiliary reservoir into the brake cylinder which sets the brake. In the same manner when the cars separate or get off the track, so as to pull the couplings apart, the air escapes from the train pipe and sets all the brakes on the train tight. If the conductor needs to set the brake he has a valve in each car where he can let the air out of the train pipe and in that manner set the brake from any car in the train. Thus it will be seen that the air brake is set whenever the pressure of air in the pipe under the train is reduced, and it follows that whenever the engineer lets the air from the main reservoir into the pipe and raises the pressure high enough to raise the triple valve up, it will shut off the air from the auxiliary reservoir and allow that in the brake cylinder to escape into the atmosphere, thus releasing the brake. Passengers can hear the air hissing out when the brake is released, and doubtless some have wondered what caused the noise under the car.

While the style of triple valve used for the past ten years is very quick in its action, yet it takes ten or twelve seconds to set all the brakes on an ordinary train of eight passenger cars. The new style lately perfected and now being introduced is so lightning like in its action that all the brakes in a train of fifty cars can be set in two seconds, and have the brakes at work and the train nearly stopped before all the old pattern were fairly at work. The trouble with the old style of air brakes, before the automatic was perfected, was, it took some time to set them all, and many precious seconds were wasted which are now utilized; in fact, it was "too slow." The old vacuum brakes were slower yet, and on a long train were practically useless, so they have been abandoned for heavy train service. While there are a great number of distinct machines in a full set of automatic brakes, yet each part in itself is simple enough to comprehend, and it is when they are in a harmonious whole that

they seem complex to the uninitiated. Each triple valve is so arranged that the air can be shut off from it in the event of anything breaking, without interfering with the use of the brake on the other cars, so an accident to one car does not disable any of the others.

While the limits of this article do not allow of fully explaining the advantages of the automatic brakes of whatever type, all will allow that the safety of the traveling public is largely due to its use. If it, in isolated cases fails to act, yet these cases are few and far apart on its successful record. It is only a matter of a short time when it will be used on all classes of fast freight trains to insure safety and rapid transit.—*Engineer in Port Huron (Mich.) Times.*

THE new shops of the Long Island Railroad Co., near the village of Jamaica, which were commenced in February last, are now practically completed, and the formal removal of the works from their present location at Hunter's Point will probably take place on or about Nov. 1.

The new buildings are of red brick, with granite foundations and trimmings. They consist of two large main structures, running north and south, respectively 517x85 ft. and 410x100 ft.: a blacksmith shop 100x60 ft.; a boiler-house 35x45 ft.; an engine-room 26x45 ft., and a store and pattern room, all separated from each other. The larger of the two main structures comprises a paint shop, 239 ft. long, capable of accommodating 14 cars; a car shop 214 ft. long, and a mill room, 89 ft. long, where the lumber will be prepared. These three shops are the full width of the building, 85 ft., and the height to the centre of the roof is 30 ft. The flooring consists of combined Trinidad and Neufchatel asphalt pavement.

The machine shop, 420 ft. long and 60 ft. wide, with an annex 40 ft. wide running the entire length, has accommodations for 16 locomotives, and is fitted up with two traveling cranes with a joint capacity of 50 tons, furnished by the Morgan Engineering Co., of Alliance, O. Two driving shafts will run the entire length of the building, one for the machinery and the other for the cranes. A boiler shop is located in the north end of the annex. The smith's shop will contain a large furnace, two steam hammers and 13 forges, and will be fitted up with exhaust flues for carrying off smoke and heat. The boiler house will contain three 75 H. P. boilers built by the Beggins Co., of New Haven, Conn. These boilers will supply steam for heat as well as power. Adjoining the boiler house on one side is a large building for a coal bin, and so fitted that the coal will drop into it from the cars, which will be run on a trestle overhead. On the other side of the boiler house, and really part of it, is a large building for an electric light plant. The shops will be lighted by electricity whenever it may be necessary to work at night, or in the winter time when the days are short.

Three 225 H. P. Westinghouse automatic engines will drive the machinery in the several departments. Between the boiler house and smith's shop stands a 125 ft. chimney. Between the two main buildings will be a 78-ft. transfer table supplied by the Yale & Towne Mfg. Co. of Stamford, Conn. A round-house to take in 50 engines is also to be built. Much of the machinery at present in use at Hunter's Point will be transferred to the new works, but a large quantity of new and improved machinery is to be put in. It will be supplied by Manning, Maxwell & Moore, of New York.

While the new works will not be the largest in the country, they will be among the most complete in design and appointments. The total cost will be about \$1,750,000. The contract for building them was given to the Flynt Building and Construction Co., of Palmer, Mass.

THE G and Trunk will shortly commence the construction of a new station at St. Johns, Quebec.

Shops.

It is said that the Union Pacific road will build large shops at Denver, Col.

The Kentucky Union Railway Co. will build machine shops at Lexington, Ky.

The Cooke Locomotive and Machine Works, Paterson, N. J., are moving into their new shops.

The Charleston, Cincinnati & Chicago Railroad Co. are building repair shops at Blackburg, S. C.

The Elizabeth, Lexington & Big Sandy Railroad Co. will erect machine shops at Lexington, Ky.

The Louisville, St. Louis & Texas Railroad Co. will rebuild their machine shops, recently burned.

The Batesville (Ark.) & Brinkley Railroad Co. will rebuild their machine shops, recently burned.

The Georgia Midland & Gulf Railroad Co. will enlarge their machine shops and roundhouse at Columbus, Ga.

It is reported that the Illinois Central Railroad will establish a machine shop and round-house at Durant, Miss.

The Florida Central & Peninsular Railroad Co. will soon commence work on their machine shops at Fernandina, Fla.

At Grafton, W. V., the Baltimore & Ohio Railroad Co. are erecting car and repair shops; where they will employ 200 men.

The Chicago, St. Paul & Kansas City Railroad expect to expend \$250,000 in building and equipping shops at St. Joseph, Mo.

The Louisville, St. Louis & Texas shops at Henderson, Ky., were burned last week, entailing a loss of \$20,000 upon the company.

The machine shops of the Northeastern Railroad, at Meridian, Miss., are to be enlarged by the erection of a two-story brick building, to contain machinery for car building and a paint shop.

The machine shops of the New Orleans and Northeastern Railroad, at Meridian, Miss., are to be enlarged by the erection of a two-story brick building, to contain machinery for car building and a paint shop.

Bids for the construction of the machine and repair shops of the Mississippi Valley Road at Vicksburg will soon be advertised for. The plans have been approved by President Wilson, and are for shops 1,200 feet in length, to cost \$100,000.

Mr. Van Horne, President of the Canadian Pacific Road, stated in Montreal last week that the company had decided to erect a new station and extensive repair shops at London, Ont., for the division between Toronto and Detroit. The city of London has pledged itself to a bonus of \$25,000 on condition that the shops be erected there.

All the machinery in the Hinckley Locomotive Works, Boston, Mass., has been sold, through the agency of Hill, Clarke & Co. About \$5,000 worth was sold at private sale, and \$25,000 worth at auction. The present buildings will be demolished, to make room for an electrical plant by the West End Railway Co.

The Mexican National will have its large car works and machine shops at Laredo, Tex., completed within 60 days. The buildings are constructed of Laredo brick, with iron truss roofs. The total cost of this plant will be over \$600,000, and it can employ over 1,000 workmen. On the completion of these machine shops the machinery now in the shops at Corpus Christi, Tex., and New Laredo, Mexico, will be removed to Laredo. It is the intention of the company to concentrate in that city the entire work of its system.

Bridges.

The Schuylkill & Lehigh Valley Railroad is to build two 1,500 foot bridges.

The New York & Long Branch Railroad will build an overhead bridge at Little Silver, N. J.

The Lake Erie & Western has closed a contract for three iron bridges, one to be placed over White river near Muncie, Ind., another near Lima, O., and a third at Buckland, O.

The Berlin Bridge Company, of East Berlin, Conn., has the contract for building a railroad bridge over Ausable Chasm, N. Y. The bridge will be 623 feet above the river and 200 feet long.

The contract for the Louisville & Jeffersonville bridge, across the Ohio river, has been awarded to the Phoenix Bridge Company, of Phoenixville, Pa. The cost is estimated at \$1,000,000.

The Columbia, Newberry & Laurens road has awarded the contract for the superstructure of the bridge over the Broad river, near Columbia, S. C., to the Edge Moor Bridge Company, of Wilmington, Del., at about \$100,000.

The Connecticut River Railroad has ordered an iron bridge of the Boston Bridge Company, to span West river, near Brattleboro, Vt., replacing a wooden structure. It will be about 100 feet long, with a bank span about fifty feet long.

The superstructure of the channel span of the Pennsylvania bridge over the Ohio river at Steubenville, has been completed and the false work removed leaving the channel clear for the passage of boats. The bridge consists of seven approach spans of 232 feet each, and one channel span of 312 feet. The superstructure has been built by the Edge Moor Bridge Works.

The wooden bridges on the Chattanooga division of the Nashville, Chattanooga & St. Louis have been replaced by iron structures, and the work of substituting iron for wood on the Hickman division has been commenced. Four of the Harpeth river bridges will be changed this summer. The principal bridge on the Lebanon branch, burned last spring, will also be replaced by an iron structure.

Plans and specifications of the pontoon railroad bridge across the Missouri river at Randolph Bluff, Mo., made by Capt. Gustave Dyes, of Liberty, Mo., have been approved by the War Department as well as by the River Commission, and construction will begin when the river reaches a normal height. The location of the bridge site is about one mile below the bridge of Chicago, Milwaukee & St. Paul railroad.

Work is in progress at Messrs. A. & P. Roberts & Co.'s Pencoyd Iron Works on the superstructure of the new bridge which is to cross the Schuylkill river at the Falls of Schuylkill, Philadelphia, to connect the Philadelphia & Reading Railroad Company's main line with the Port Richmond Branch, to accommodate the Baltimore & Ohio through trains to New York. The bridge is to be of iron, resting on stone piers and approaches, and will be a plate-girder bridge.

The Richmond, Nicholasville, Irvine & Beattyville road has awarded the contract for an iron and steel bridge across Casey creek, near Nicholasville, Ky., 1,600 feet long, to the Shiffler Bridge Company, of Pittsburgh, Pa., the price being \$100,000. The road will shortly build a similar structure across the Kentucky river, at Irvine, Ky., to cost \$100,000, and bids will soon be asked for. A. E. Richards, Louisville, Ky., is President.

The Phoenix Bridge Company, of Phoenixville, Pa., has been awarded the contract for building a large iron bridge on the Alabama Midland at Montgomery, Ala. This company is now erecting the iron bridges of the Columbus Southern over Bull and Tsatole creeks. The latter bridge has a span of 150 feet. The company also has the contract for the construction of the new iron bridge for the Nashville, Chattanooga & St. Louis road across Stone river.

Car Notes.

The Cleveland, Akron & Columbus has ordered 600 tube freight cars.

The Pullman shops are to build 500 freight cars for the Chesapeake & Ohio.

Works to be known as the Alabama Car Works are to be established at Oxanna, Ala.

The Lake Erie & Western will soon place an order for 500 box cars of 50,000 lbs. capacity.

An order has been placed for 500 freight cars for the St. Louis, Iron Mountain & Southern.

It is stated that the Cleveland, Cincinnati Chicago & St. Louis will order 500 freight cars at once.

One hundred new stock cars have been ordered by the Cleveland, Cincinnati, Chicago & St. Louis.

The United States Rolling Stock Co. is enlarging the capacity of its Anniston shops to 20 cars per day.

The Dunham Manufacturing Company, Boston, has recently received orders for 2,000 of its freight-car doors.

The Easton shops of the Lehigh Valley have received orders for 12 chair-cars and the same number of passenger cars.

The Indianapolis Car & Manufacturing Co. has received an order for 100 coal cars from the Choctaw Coal Co., of Denison, Tex.

The Terre Haute Car & Mfg Co. of Terre Haute, Ind., is building fifty furniture cars for the St. Louis, Vandalia & Terre Haute.

The Fitchburg is building at its shops in Fitchburg, Mass., 100 box cars, 50 cars for the shipment of carriages and 25 platform cars.

The Centropolis Car Company, Centropolis, Kan., has just completed its works. The foundry has been running some time.

The Lafayette Car Works have received an order from the Toledo, Ann Arbor & North Michigan for 100 box cars and 100 gondolas.

The Pennsylvania has, it is announced, decided to increase its equipment by 8,000 freight cars, instead of 3,000, as recently announced.

The Louisville & Nashville road is reported in the market for 1,000 more freight cars. Since March 1 the L. & N. has added 1,500 to its freight equipment.

The Carlisle Mfg. of Carlisle, Pa., has contracts on hand for 100 cars for export to Cleofuegos, Cuba; 200 coal for the Pennsylvania, and a quantity of mining cars for various parts.

Several car companies have been asked to bid on 500 cars for the Cincinnati, Hamilton & Dayton; the same number for the Cincinnati, Washington & Baltimore, and 200 for the Tennessee Midland.

Two hundred new cars have been ordered for the Kanawha Dispatch freight line over the Cleveland, Cincinnati, Chicago & St. Louis and Chesapeake & Ohio roads. The cars are to be equipped with air brakes and Janney car couplers.

The Ohio Falls Car Works, at Jeffersonville, Ind., have secured a contract to construct 500 freight cars for the Pennsylvania Company, and have sold 50 box cars to the New Orleans, Fort Jackson & Grand Island road, and 50 gondolas to the Birmingham, Sheffield & Tennessee River.

The Lake Shore & Michigan Southern road has just placed a contract with the Indianapolis Car Works for 300 coal cars, October delivery, and with the Lafayette Car Works for the same number, November delivery; and the company will give out orders immediately for 500 more coal cars, 300 gondola cars and 300 box cars.

The Haskell & Barker Car Co., of Michigan City, Ind., has received a contract for 100 stock, 100 platform and 100 box cars for the Sioux City & Northern.

The Receivers of the Missouri, Kansas & Texas have awarded the contract for 500 coal cars to the Indianapolis Car & Manufacturing Co. The cars will be 33 ft. long, with a capacity of 50,000 lbs.

The San Francisco and Northern Pacific will soon place an order for 25 box cars and 50 platform cars. These cars may be built at Tibourn, Cal., opposite San Francisco, where the company recently had 50 box and platform cars built.

A Pittsburgh iron company has received the contract for the construction of 75 steel tanks, to be used for the transportation of oil between Pittsburgh and the Pacific Coast. The contract calls for the delivery of all the cars at San Diego, Cal., by Jan. 1.

The Nashville, Chattanooga & St. Louis has recently received three new passenger cars from the Ohio Falls Car Works, and is having two more built at the Pullman Works. The cars are handsomely finished in mahogany and red wood, and will be used on the Nashville and Chattanooga Division.

The Philadelphia & Reading has just received from the Pullman Palace Car Co.'s Works five new passenger coaches and five new combination smoking and baggage cars for use on the Atlantic City road. This addition makes a total of 50 handsome new passenger coaches added to the equipment of the Atlantic City road since July 1.

The Grand Trunk shops at London, Ont., have just turned out a handsome new dining car 63 ft. long with vestibules. The interior is finished in mahogany and ornamented in blue and gold. The tables on one side of the aisle seat four persons each and those on the other side two. In place of the usual seats, rattan chairs are provided.

The Alabama Great Southern recently placed an order ten new cars, baggage, mail, express and passenger coaches, with the Ohio Falls Car Co., of Jeffersonville, Ind., and the cars are now being received. The Ohio & Mississippi is having seven United States mail cars, 62 ft. in length, and four coaches of mahogany finish on the interior, built at these works.

Two trains have been built consisting on one combination baggage and smoking car, two coaches and two drawing room cars—ten in all. The coaches and combination cars are to be the property of the "Shore Line," made up of the Old Colony, New York, Providence & Boston and New York, New Haven & Hartford. The drawing-room cars are owned by the "Wagner Shore Line Co." and the railroad companies jointly.

The Pennsylvania has let the contracts for building the 3,000 freight cars for the lines west of Pittsburgh, as follows: 2,000 box cars equally divided between Pullman's Palace Car Co., Ohio Falls Car Co., Michigan Car Co. and Lafayette Car Works. The rest were long, drop-bottom gondolas, and were let as follows: Pullman Palace Car, 500; Michigan Car Co., 250; United States Rolling Stock Company, 250.

The Georgia Pacific is having a number of freight cars of 60,000 lbs. capacity built at the Pullman Car Works at Chicago. The cars are equipped with Wagner doors and Janney couplers, and they have no dead blocks. The Pullman shops of the Pullman Co. now have orders for 1,000 cars. The works will soon start on an order of 200 Armour refrigerator cars and 200 Wickes refrigerator cars for the Merchants' Dispatch, and the 500 box cars for the Pennsylvania Co. The passenger cars shops are busy constructing cars for the Norfolk & Carolina, the Georgia Pacific, Richmond & Danville, Oregon Railway & Navigation Co. and others.

Locomotives.

The Concord road has received 3 ten-wheeled engines from the Manchester Locomotive Works.

The first locomotive for the Cape Breton railroad was landed at Sydney, C. B., last week.

The Pittsburgh Locomotive Works are building several engines for the Richmond & Danville Railroad.

The Lake Erie & Western last week received three new Mogul engines from the Brooks Locomotive Works.

The Chesapeake & Ohio is said to have let a contract for 3 new passenger engines and 20 freight locomotives.

The Ohio Valley road last week let the contracts for five new engines and a number of new passenger coaches.

The Fort Wayne, Cincinnati & Louisville has received from the Baldwin Locomotive Works two 45-ton freight engines.

The Brooks Locomotive Works have received an order from the Toledo, Columbus & Cincinnati for a new switching engine.

The Rogers Locomotive Works, of Paterson, N. J., have received a contract to build 6 locomotives for the Sioux City & Northern.

The Missouri, Kansas & Texas has received the first 15 new locomotives recently ordered from the Baldwin Locomotive Works.

The New York Locomotive Works, Rome, N. Y., are building 7 consolidation freight engines for the New York & New England Railroad.

The Receiver of the Houston & Texas central has been authorized to purchase 11 new freight engines. They are not to cost exceeding \$7,500 each.

The machinery and tools of Hinkley's Locomotive Works, 439 Albany street, Boston, have been offered for sale by Hall, Clarke & Co., of Boston, Mass.

The Rhode Island Locomotive Works have completed the last of the 60 ton class H engines recently ordered for the Chicago, Burlington & Quincy.

Five new engines have been ordered for the Columbus Southern from the Rhode Island Locomotive Works, and two will be delivered very soon.

Among other orders at the Baldwin Locomotive Works, Philadelphia, are 25 freight engines for the Texas & Pacific, and 19 for the Atlantic Coast Line.

Three new eight-wheel connected engines, with cylinders 21x26, have recently been completed at the New York Locomotive Works, for the Rome, Watertown & Ogdensburg road.

Five more 10-wheel fast passenger locomotives have been ordered for the Michigan Central. The first 10-wheeled engine was placed on the Michigan Central two years ago.

The Pennsylvania shops at Altoona, Pa., have received an order for 17 locomotives of Class P pattern for the New Jersey division, and also an order for 15 class O locomotives.

The Baldwin Locomotive Works have an order for 20 locomotives from the Rio Grande Western Road, and the New York Locomotive Works are building four for the same road.

The Rogers Locomotive Works have an order for building three locomotives for the San Francisco & North Pacific for freight and passenger service. The cylinders will be 17x24 in.

The Louisville, New Orleans and Texas has received 10 of the 15 locomotives recently ordered of the Schenectady Locomotive Works. Ten are for freight service and five for switching.

The Richmond, Nicholasville, Irvine & Beattyville road last week ordered from the Pittsburgh Locomotive Works its first engine, and from the Pullman Car Co. a construction train of 10 cars.

The Chesapeake & Ohio has ordered several ten-wheel passenger engines of the same pattern as several recently built by the Baldwin Locomotive Works for the New York, Lake Erie & Western.

Messrs. Thomas B. Inness & Co., of 115 Broadway, New York, have for sale for early delivery the following new standard gauge locomotives: Four 17x24 passengers; one 17x24 mogul; one 18x24 mogul, and one 17x24 shifting.

The Rhode Island Locomotive Works have just completed a new passenger engine for the New York & New England. It has cylinders 20x24 and 69 in. drivers. It was designed by J. B. Heiney, Superintendent of Motive Power.

The Pittsburgh Locomotive Co's shops are running 13 hours a day, completing orders. The company received an order from a Western road last week for 10 heavy engines similar to several which it recently completed for the St. Louis, Vandalia & Terre Haute.

The 11 engines building for the Baltimore & Ohio by the Baldwin Locomotive works will have the grates, fire-boxes, exhaust nozzles, etc., arranged for coke burning. The engines have 18x24 in. cylinder, drivers of 66 in. diameter, and boilers 58 in. in diameter at first ring.

The Rhode Island Locomotive Works, in Providence, are building 12 consolidation locomotives for the Fitchburg Railroad and 2 eight wheel engines for the East & West Alabama; also a fast freight engine and a Forney engine for suburban traffic for the New York, Providence & Boston Railroad.

The Brooks Locomotive Works of Dunkirk, N. Y., have received an order for 15 new engines for the Cleveland, Cincinnati, Chicago & St. Louis, 10 of which are to be moguls for freight traffic, and the remainder are to be switching engines. It is stated that the company will soon let the contract for four passenger cars.

The contract for the 56 new locomotives for which the New York Central & Hudson River road was asking bids for building, have been awarded to the following companies: 10 to the Brooks Locomotive Works, Dunkirk, N. Y.; 22 to the New York Locomotive Works, Rome, N. Y.; and 24 to the Schenectady Locomotive Works, Schenectady, N. Y.

Judge David J. Brewer, of the United States Court, has authorized the Receiver of the Missouri, Kansas & Texas to purchase 10 heavy freight mogul and 7 passenger locomotives. The 15 mogul engines purchased in March last have been used to replace other engines which had been removed by the Missouri Pacific, the lessee at the time of the receiver's appointment.

The New York Central & Hudson River Railroad is about to let contracts for 56 new locomotives. The number will include 50 freight engines, with six wheels coupled, and cylinders 19x26, weighing 60 tons each; five passenger engines for local service on the Harlem Division, ordinary American type, 17x24 in. cylinders, weighing 42½ tons each; and one dummy engine, for hauling freight on the New York City street tracks.

Twenty new locomotives, built by the Rogers Locomotive Works at Paterson, N. J., have been added to the rolling stock of the Louisville & Nashville. Ten are consolidations and ten are switch engines.

This company also has under construction five 40-ton moguls and five 43-ton eight-wheeled engines, and also a set of pumps for the city of Ottawa, the capacity of which will be 10,000,000 gallons in 24 hours.

WOMAN'S DEPARTMENT

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to

MRS. IDA A. HARPER,
TERRE HAUTE, IND.

NOVEMBER, 1889.

ONE VIEW OF WOMAN'S WORK.

It has been a question what to write about this month; in seven or eight years of continuous writing for the same class of readers, every conceivable topic is touched upon and repetition becomes almost a necessity. I stood at the gate a long time this evening enjoying the exquisite beauty of the scene. The moon flooded the earth with that mellow light which invests every object with beauty, softens all rough features and covers even commonplace objects with radiant loveliness. Up the street the lights shone out from beautiful homes across the grassy lawns, over which the tall trees cast long and deepening shadows. In the distance, a band was playing the national airs. The maples and the woodbine were blushing scarlet at the first bold touch of the frost. The wind rustled softly through the dead leaves on the walk. The peaceful scene, the delicious air, the restful quiet were delightfully refreshing to the tired body and the weary spirit.

Then there flashed across my mind a fragment of an essay written by a little boy on the subject of "girls," in which he says, "They look out every night and say, 'O, ain't the moon lovely?'" And I remembered the long ago when I could hardly force myself away from the window on a moonlight night to go to bed, could scarcely afford to lose a moment of that transcendent beauty even in sleep. I could not then realize how many times that moon for me would wax and wane and disappear; how many times I would look up into its calm, impassive face through blinding tears, with heavy and rebellious heart. Still does the æsthetic part of my nature enjoy the radiant glory of the moonlight, but there is a chilliness and austerity in those beams where once was only warmth and promise. They shine now on the graves of the beloved dead, and on that other tomb where lie buried the visions of youth, the hopes, the ambitions, the ideals of early life.

I have been reading to day one of Mrs. L. M. Barry's letters, written from abroad, in which

she assures American women how infinitely superior is their position to that of any foreign woman. I believe we fully appreciate this fact and, just as no man ever wishes he had been born a woman, so no American woman ever wishes she had been born in any other country. This is especially true of working women, who here may pursue their avocations without losing caste, and when marriage takes them out of the ranks it is no reproach or hindrance that they formerly earned their own living. In this connection a point suggests itself that I have often thought of writing about, but upon a subject in regard to which there is a decided difference of opinion, one is almost sure to be misunderstood.

I believe that all girls should be educated and trained to be self-supporting, and, except in cases where parents are wealthy, that they should relieve fathers and brothers from the burden of their support as soon as they are competent to do so. Daughters of wealthy parents should not enter the ranks of the wage earners, because the already increased supply over the demand creates a ruinously low rate of wages. Rich girls can find abundance of labor in the world necessary to the welfare of mankind, but which languishes for the hands to do it because it brings no financial rewards. The works of philanthropy and reform should be in charge of the wealthy, leaving those who must work for a living free to devote their time and strength to their own maintenance. Working girls should take up their tasks bravely and cheerfully, discharge them faithfully and strive to improve the character of their work and the amount of their wages. They should not look to marriage as a release from labor but rather as a change of occupation, and they must use a great deal of judgment and wisdom in marrying, lest they give up a good position for a poor one.

But this is the point I want to emphasize: Having decided to marry make also a decision to let housekeeping, with its attendant responsibilities, be your occupation henceforth. You will find its daily requirements very monotonous; you will miss your weekly wages to spend as you please. Make up your mind to this when you marry. For these unpleasant features you will secure many compensations. There is an independence in having your own home, in controlling your own time, in the protection of your husband, the love of your children. Marry a man who is able to support you, and one who believes that your services inside the home are worth just as much as his labors outside. Subdue the ambition that will creep in upon you to make a little "pin money" by doing something beyond your household duties. House-keeping, with its complex demands, the care of children, the

endless sewing, are a severe and sufficient tax upon the strength of every woman. If she can find any leisure outside of these, let her employ it in reading, recreation or rest. There are many objections to a wife's attempting outside work. The strain upon her system produces nervousness and irritability, and the cash returns for her services create a distaste and a discontent for that labor which is commonly regarded as having no actual financial value. In addition to this, in many instances, the husband comes to accept this additional work as a matter of course, and relaxes his efforts to support the family. In discussing this question those cases are not included in which through sickness or profligate habits of the man the wife is compelled to do double duty, but only those are considered where the wages of the husband are sufficient to maintain the family. This restlessness on the part of the woman is due in a large degree to the habit of the husband to hold the pocket-book with a tight grasp, and look upon the money as his private property to be doled out according to his inclination. To bring him to an understanding of the new dispensation, in which men and women have equal rights, is a matter of growth and education. Wives must be patient, must keep themselves fully abreast with the progressive spirit of the age and, by being faithful to every present trust, they will prove themselves worthy of greater confidence and wider liberty.

I wish the correspondents of this Department could be persuaded to write upon subjects that are of special interest to women. Their private letters to me are often more readable than those they send for publication. They write in a simple, natural manner about home topics. Do give the Brotherhood and the boys a rest; they are very good institutions, both of them, but let us talk about something else for awhile. What are you going to do this winter? What did you do this past summer? Is anything perplexing you? What can the Woman's Department do for you? What do you think is the object of life? Write freely of what is in your heart.

We have now entirely "caught up" with our correspondence. All the letters received during the past year have been published, except a very few, which were of a personal nature or were entirely unworthy of space. We invite our old correspondents to continue their letters and will welcome new friends into our family circle.

How would our friends like a "query" column? Send in questions on whatever subject you are interested in and we will try to have them answered.

DOMESTIC.

Chili Sauce.—Twenty-four large, ripe tomatoes, four green peppers, four onions, two tablespoons of salt, four cups of vinegar. Boil three hours.

Tomato Catsup.—One gallon of tomato juice, one quart of vinegar, three tablespoons of salt, two tablespoons of mustard seed, two tablespoons of pepper, and one cup of sugar.

White Cake.—Two and one-half cups of pulverized sugar, one cup of butter, three tablespoonfuls of baking powder, four cups of flour, one cup of milk, whites of eight eggs. This never fails.

Stuffed Tomatoes.—Six smooth tomatoes, pare and cut the hearts out. Fill the shells with one onion chopped fine, half cup of bread crumbs butter size of an egg. Salt and pepper and bake half an hour.

At this season salt is liable to clog in the shakers. To prevent this mix the salt with cornstarch, using seven parts of salt and one of cornstarch. This small quantity of cornstarch is not objectionable.

Grape Catsup.—Five pounds grapes, one pound sugar, one pint vinegar, one tablespoon pepper, one of allspice, one of cloves, one of cinnamon, and one-half of salt. Boil till it is a little thick. Excellent with fish.

To can tomatoes for winter use, select sound and thoroughly ripe tomatoes, scald and peel them; parboil them three minutes, salt well; put them into warm jars and make them air tight as fast as filled.

Sweet Peach Pickles.—Take plump peaches, wipe all the fur off, stick from six to nine cloves in a peach, lay in a jar, add half a pound of sugar to a gallon of vinegar, boil vinegar and sugar together, pour over the peaches in the jar boiling hot.

Tomato Salad.—Twelve tomatoes, peeled and sliced. Dressing—One raw egg, well beaten, one-half teaspoonful of salt, one teaspoon of sugar, one salt spoon of cayenne pepper, one cup of vinegar. Mix thoroughly and pour over tomatoes and eggs. Set on ice for half an hour.

An excellent preserve may be made from tomatoes, both red and yellow; that made from the small yellow tomato being one of the choicest sweetmeats known. For red tomato preserves take medium-sized tomatoes that are smooth or just ripe, scald just enough to loosen the skin, peel them, and to each pound of tomatoes allow one pound of granulated sugar, the juice and yellow rind of one-half lemon and a little sliced ginger root. Let them cook slowly for three hours and they are ready to bottle. Prepare the yellow tomatoes in the same way as the red, being careful not to break them while peeling. Weigh equal quantities of sugar and of the tomatoes, and to every pound of sugar used take one-half of a lemon cut in thin slices. After putting into the preserving kettle use enough water to moisten the sugar, and cook slowly for one hour, removing any scum as it appears.

For Woman's Department :

TO SHANDY MAGUIRE.

(Written in reply to poem in August number.)

I've read your poem through, my friend,
And grant you absolution;
You seem to be quite penitent,
I deem it no delusion;
For, have you not in words so meek?
Admitted your transgressions?
Have you not come to me and made
An honest plain confession?

In fancy I can see you now—
A suppliant meek and lowly,
And hear the "gulping sighs" you heave,
On bended knee before me;
No "cynic sneers" nor doubtful jeers
Shall wound thy heart so tender,
Then have no fear while I proceed,
Forgiveness, now to render.

You've told how your poetic muse
Has led you into trouble,
For which you have apologized
In language nice though subtle;
Yet we who oft have felt the lance,
Hurled from your keen effusions,
In friendship now would grasp your hand
If it be no intrusion.

We never thought you meant to wound
The feelings of another,
We gave too used to railing song
That you so oft did utter;
We never have delved between the lines—
We have only read as written,
But now I trust you'll sin no more,
Since I have you forgiven.

Now since forgiveness you have won.
With joy your heart will gladden,
And oft the praises will be sung
Of "Cousin Nell" and Miss McFadden;
While dear Irene and Mrs. H—,
Will help to swell the chorus,
With Alice O. Darling and Nellie B—,
I think you must adore us.

'Tis true that matrimonial seas,
Are oft times rough and stormy,
We glide along o'er sunken reefs,
While the heavens o'er head look squally;
But yet much pleasure might be found—
Though stormy be the weather,
If husband and wife once tied for life,
Will only pull together.

And now, kind friend, take my advice,
And steal not into Heaven,
You might be elected in a trice,
And from its joys be driven;
No craftiness nor subtle ruse,
Will gain you free admission
To realms of bliss where happiness
Is won through deep contrition.

—Mrs. Nellie Bloom.

WEST OAKLAND CAL., September 8, 1889.

[There you are, Shandy, confessed, shrived
and forgiven.—Ed.]

MISSOULA, MONT., September 10, 1889.

To the Editor of Woman's Department:

I have been a reader of the *Locomotive Firemen's Magazine* for some time. Very seldom do you see anything from here. The boys never write anything in regard to their Lodge, perhaps they are ashamed of the way it is carried on or they may think they will get into a scrape like Mr. Shandy Maguire has lately with the ladies through the *Magazine*. One great fault with Shandy, he makes flirting publicly known

through the *Magazine*. It is splendid in the ladies to let him know their opinion of him, but he does not seem to be bluffed at any remarks they say against his flirting. He does not seem to think he will get himself into trouble with the ladies' husbands, but most likely their husbands are away carrying on a handkerchief flirtation with some lunch counter girl as they pass her stand by the depot. Railroad men are a pretty fast set. There are a few who care to spend their evenings at home; a very few. Unless there are a few old railroaders, such as the majority that run on the Q., who are too old to run around among the boys, you can rest assured they have had their day. Shandy needn't think because ladies notice him they are gone on him. If he thinks so he is a little weak in his upper story. Here is one that is not in love with Shandy's looks or poetry.

Kate, A Fireman's Sister.

TEMPERANCE.

It is claimed that in England there are five hundred deaths every year from delirium tremens alone.

The C. L. S. C. class of '93 may almost be known as a W. C. T. U. class, nearly every lady member on the ground at Chautauqua wearing a white ribbon.

Dr. Bombaugh, an experienced medical examiner, claims that out of every hundred heavy beer drinkers, not more than five pass the age of fifty-three.

A prominent Chicago physician, says the *Lever*, has opened a private hospital for the treatment of professional and business men addicted to the drink habit.

A New York brewer places the average number of glasses of beer consumed by his employes during one day at seventy-five apiece, each glass holding half a pint.

The seventh annual convention of the wine, liquor and beer dealers of the State of New York, lately held at Rochester, was honored by the presence of the City's Mayor, who welcomed the convention in the warmest terms.

Mr. Spurgeon, in his new book entitled "Salt Cellars," tersely remarks that "grape juice kills more than grape shot." He also advises each married man to keep his wife's husband out of the public house.

"What goes when the saloon goes?" inquires the *Seattle Leader*. "The brothel, the gambling hell, the tramp, the criminal, the drunkard, political corruption, pauperism, ignorance, bad debts and hard times, while the saloon keeper goes—to work."

Three thousand penitentiary convicts and two hundred and eighty-five thousand occasional prisoners constitute a portion of the yearly crop of crime developed by the heat of intoxicating liquors and gathered in by the prisons of the United States.

*For Woman's Department:***COMPOSITION OF THE LORD'S PRAYER.**

Thou is the mercy seat our souls doth gather
 To do our duty unto Thee,
 "Our Father"
 To whom all praise all honor should be given,
 For thou art the Great God
 "Who art in Heaven."
 Thou, by Thy wisdom rulest the world's
 Whole frame; forever; therefore,
 "Hallowed be Thy name,"
 Let never more delays divide us from
 Thy glorious grace, but let
 "Thy Kingdom come,"
 Let Thy commands opposed be by none but Thy
 good pleasure and
 "Thy Will be done"
 Let our promptness to obey be even the very
 same.
 "On earth as it is in Heaven."
 Then for our souls oh, Lord, we also pray
 Thou wouldst be pleased to
 "Give to us this day"
 The food of life, wherewith our souls are fed,
 Sufficient raiment and
 "Our daily bread,"
 With every needful thing do Thou relieve us,
 And of Thy mercy pity
 "And forgive us"
 All our misdeeds for Him whom Thou didst
 please to make an offering for
 "Our trespasses,"
 And for as much Oh, Lord as we believe,
 That Thou wilt pardon us
 "As we forgive"
 Let that love teach where with Thou doest acquaint us,
 to pardon all those
 "Who trespass against us,"
 And though sometimes Thou findest
 We have forgot this love for Thee, yet help and
 "Lead us not"
 Through soul or body's want
 "Into Temptation,"
 Let not the soul of any
 True believer fall in the time of trial but
 "Deliver"
 Yes, save them from the malice of the devil and
 in both life and death keep
 "Us from evil,"
 Thus pray we Lord for that of thee from whom
 this may be had,
 "For Thine is the kingdom"
 This world is of Thy work, its wondrous story to
 Thee belong
 "The power and the glory"
 And all Thy wondrous works have ended never,
 But will remain "Forever and
 Forever"
 Thus we poor creatures would confess again, and
 Thus would say eternally,
 "Amen."

Mrs. W. F. Porter, Fireman's Wife.

BUTLER, IND., September 9, 1889.

MISSOULA, MONT., September 11, 1889.

To the Editor of Woman's Department:

I have just finished reading the September number of the *Firemen's Magazine*. I see so much about changing the name of Firemen for some other. If I am in order I shall say a few words to the boys. What is the matter with you, boys, that you are getting so dissatisfied with your name? If you were girls this would not seem strange, as they are fickle and are apt to want a change of name. Boys I thought, were more staid, and did not fret about such trifling matters. You have not forgotten how anxious you were to have this name you now wear. It is an honest name, and you toiled hard for it; be careful, don't change it for a less appropriate one. You will remember when you

went into the round house to wipe engines, your ambition was to become a fireman. You wiped and wiped all the dirt and oil on your clothes, and were happy. After you had learned where to find the fire-box, knew in what part of the machine the smoke stack was located, and could take up the lost motion in the ash pan, you were then promoted to fire the switch engine. How grand you felt when you climbed up on the left side, threw one foot out the cab window, lighted a cigar and waited for signals. You were a fireman; had cast off the wiper with the dirty clothes, and you were very proud of your new home, although you could not sport the B. of L. F. pin on your shirt front. But you were intending to become a B. of L. F. man if good conduct, hard work and study would accomplish the object. Well, in course of time you learn all about cylinders, piston valves, hose injectors, scoop tanks and time checks. Then you are promoted to fire on the main line; you are getting on finely, and still satisfied with the name. After a few years, or maybe one year, you are admitted to the B. of L. F. Lodge. Now, when you have gained this, you have become dissatisfied with the name and want it changed. Do you think the name will change the work? Firing will be firing still. It is honest work and the name is appropriate. So, boys, don't change the name until you change your seat.

The fireman's friend,

C. E. C.

SUFFRAGE.

Fully half the votes at the recent school election at Fairmont, Neb., were cast by women.

The Prime Minister, Sir Henry Parkes, has promised that his new electoral bill for New South Wales shall include women as voters.

At the recent W. C. T. U. convention at Brandon, Manitoba, the Attorney General of the province put himself squarely on record for equal suffrage, to the surprise of everyone present.

The W. C. T. U. seeks the ballot for no selfish ends. Asking it only in the interest of the home, which has been and is woman's divinely appointed province; there is no clamor for 'rights,' only prayerful, persistent plea for the opportunities of duty.—*Mary B. Willard.*

An exchange says: "The utmost courtesy was shown to those women who turned out at Detroit to register in order to vote at the April election. In many registration places the judges prohibited smoking, two saloon-keepers removed the place of registering from their saloons to respectable quarters near by, and no unseemly conduct was indulged in by any man while the women were registering. About 500 registered the first day the books were opened. Mrs. E. C. Skinner received the following from Thomas W. Palmer: 'I sent you congratulations. Let every woman register and vote. It means greater consideration for the affluent, better wages for the struggling, better law, better officers, and a better State.'"

INDUSTRIES.

Miss Ottilie Thomas, stenographer and typewriter, is said to be the only American girl in charge of an exhibit at the Paris Exposition.

Miss Annie Lancey, of Carmel, O., has leased a mill property there, and is doing a large business, employing fourteen men, and operating day and night.

Mrs. Lenora M. Barry is with the American Workingmen's Expedition, now traveling in Europe, and was one of the speakers at the immense reception given the Expedition by the Trades' Organizations of Paris.

Miss Lizzie Blackwell and Miss M. B. McKenzie, two fine type-setters, found their paper, the *Scott County Register*, of Forrest, Miss., suspended and their town without a local journal. They have bravely seized the opportunity, and, as editor and publisher, send out as good a county paper as there is in the State.

The Buffalo Medical College has of late years opened its doors to women. Two of these have taken the junior course in pharmacy and have bought out a drug store, centrally situated, and are now its sole proprietors and managers. The idea of women conducting a drug store was so novel, especially to an Englishman, that it was thought worthy of a notice in one of the London journals.

Mrs. Charles Crocker's latest gift to San Francisco—a home for girls out of employment—was opened a few days ago. The building and site cost \$32,000, of which Mrs. Crocker gave \$15,000. Mrs. Crocker's daughter, Mrs. Alexander, gave generously also. The working-girls of San Francisco will have cause to remember the names of these two ladies with gratitude.

Miss Charlotte Robinson, an English artist, enjoys the patronage of Queen Victoria, and has the title of "Home Art Decorator to her Majesty." Miss Robinson is a house decorator, and is doing a thriving business. She is rarely without two or three houses on hand, whose decorations from cellar to garret is frequently left entirely to her direction. It was while traveling in America that Miss Robinson was struck by the decoration of certain New York homes, and thereupon resolved to devote herself professionally to such work.

Miss Laura A. Fry has followed her grandfather's and father's profession of wood-carving since 1876. When asked whether she could recommend the craft for women, she answered: "As regards skill, women may become as dexterous wood-carvers as men; but wood-carving is as much an art as is the sculptor's, and 'art for art's sake' must be the creed of its follower. As a money-making work it is a failure, for the materials are costly and the process slow. In a modified form, however, as in designing appropriate decorations for furniture, it is full of possibilities.

MISCELLANEOUS.

"Do not think you can do anything worth doing in a fit of enthusiasm, but train yourselves carefully to any work you are called to do."—*Florence Nightingale*.

She—"You were not so dissipated before we were married." He—"Indeed I was, my dear; but when anybody told you so then, you wouldn't believe it."—*Life*.

The latest agricultural news: Jack (excitedly)—Mamma, you know that lemon-pit I planted last year that came up a pea vine? Well, it's got string beans on it?—*Life*.

"Bigotry has no head, and cannot think; she has no heart and cannot feel; when she moves it is in wrath; when she pauses, it is amid ruin; her prayers are curses."—*Phillips*.

Precocious boy—Mamma, was Ananias killed for telling just one lie? Mamma—He was, my son. Boy (thoughtfully)—There has been a change in the administration since Ananias' time, hasn't there, mamma?

Mrs. Wistful—What happy people you are, to have six nice daughters! What resources for your old age! Mr. Quiverful—Yes, Resources enough. But the difficulty nowadays consists in husbanding one's resources!

Missress—"Why, Mary, I told you to make up my room an hour ago, and here it is in terrible disorder." Mary—"Yis, mum, an' I did make it up; but the master came in to put on a cane collar, mum, an' he lost the button."—*Epoch*.

The only thing a man makes, is his condition of fate. Though commonly he does not know it, nor put up a sign to that effect, "My own destiny made and mended here," [not yours,] he is a master workman in the business. He works twenty-four hours a day at it, and gets it done.—*Thoreau*.

Sweden would seem to be a country after the heart of the most pronounced advocate of woman's rights. Women are there employed in all the vocations which ordinarily are conceded to be the peculiar property of mankind. Every Swedish girl not born to wealth is taught a trade of some kind, and it is now triumphantly announced that Swedish women will shortly receive equal political rights with their husbands and other male relatives.

The *Youth's Companion* gives this as an incident of the early days of New England: "A wife published that she would not pay her husband's debts as usual, for they had agreed to separate, and she had given him one-half of her property to get rid of him. The notice ended with—

I'd rather live a single life,
Than pay his debts and be his wife;
For I am weak and full of fear
And debts grow heavier every year.

COMFORTED.

BY ELLEN HAMLIN BUTLER.

I'd just been desparate all that day; I couldn't stand one thing more;
The work was piling and piling up, like an awful mountain before.
I gave my dishcloth a twist and a wring, the wring of my bitter mood.
And said, "If the Lord is tender, or cares, He'll show me a token of good."

And Milly turned, as she stood outside, in her pretty new figured gown,
I saw the tears in her big blue eyes—God bless her! they seemed to drown
A little of all I was suffering. She waited, and then said she,
"Perhaps He sends us some tokens that we do not look to see."

When she was gone, I sat down and cried, with my head on the old red shawl.
I almost thought there wasn't a God to plan for this world at all!
But after I'd cried my tears away, I thought of what Milly had said;
I thought of it all the afternoon, and when I had gone to bed.

In the morning, I went to the door, and there was my cactus at last in bloom;
A great, red, glorious blossom that had burst 'twixt the light and gloom.
And when I looked deep into its heart, I felt a kind of an awe;
That sheaf of stamens! that perfect cup! but that wasn't all I saw.

I gazed at the gnarly, prickly plant, so bare and crooked and dry,
With that blossom just like a rosy star dropped out of the morning sky,
Then sank to my knees beside the door, and there on the cold, wet sod,
I knew there was One who cared for me, and He was the loving God.

For oh, if He has the power to make such a flower by love divine,
Perhaps He will bring a pure white soul from such a poor life as mine;
It is dry, and twisted, and dreary, filled up with my household dust;
But ah! I have a-en His token, and I know I can wait and trust.

—*Matie Farmer.***EDUCATION.**

Miss Anna V. La Rose, of the Logansport (Ind.) High School, has been elected to the superintendency of the Logansport schools.

The Woman's Medical College of Chicago celebrated the opening of its twentieth year of instruction last week. Over one hundred students have been enrolled for the present year, and a large, new college building is nearly completed, which will be used for operations and lectures.

The Woman's Club of Decatur, Ill., which includes in its membership several hundred of the representative ladies of the city, will erect a club building at once and fit it up in elegant style for regular meetings, afternoons and evening. The structure will cost \$10,000, and nearly all of the money is subscribed. The club discusses scientific, literary and domestic questions, and occasionally arranges for lectures.

The literary world is again surprised by finding another feminine writer behind a masculine name. Graham R. Thomson, whose exquisite verses have been a feature of *Scribner's Magazine*, is a young and beautiful Englishwoman with the commonplace name of Mrs. Sharp.

Three women, Mrs. Francis A. Crock, Miss Isabel Hart and Mrs. E. B. Stevens, are incorporators of the new Woman's College, of Baltimore, Md., and Miss Hart is one of the trustees. This Southern college for women is more progressive in this respect than some of its Northern sisters.

Miss Lois Royce, the young school-teacher who lost both her feet in consequence of her heroic fidelity to her pupils during a blizzard, can now walk on the artificial feet sent to her. She is doing well in her studies at Cornell College, Mount Vernon, Ia., where she is taking a four years' course.

Whoever objects to "woman's rights" can take it as man's rights, human rights, the rights of children, of the poor, or of our motherland. They are all the same, and are all included in that beneficent effort which is to result in man and woman, the two halves of the perfect whole, standing side by side in morality and good citizenship, equal before the law.

Miss Mary Louisa Worley, the daughter of a London physician, has distinguished herself as a young woman of remarkably high degree. In 1884 she won a scholarship at Girton college, Cambridge, in 1886 graduated with classical honors at London university, and in 1888 did the same thing at Cambridge, capping the climax by passing so brilliant an examination for the degree of London Master of Arts that she took the first place and at the same time won the gold medal for classics. Miss Worley intends to make teaching her profession.

PROUD OF THEIR CHAINS.*Woman's Tribune.*

The outward tokens of woman's former subjection, the earring, the bracelet, the head-cover, have become ornaments. The marks of the chain on the mind and soul cannot thus be transmuted by time, yet some women appear to be proud of their weakness and ignorance, and to consider these give them a title to consideration, choosing thus to wear as gifts of Nature the habits of the slave.

*For Woman's Department:***MIGNONETTE.**

'Tis a small, modest flower that grows in the garden,
Which boasts not of colors, rich, bright, or rare,
Unassuming, and simple, it seeks not notoriety
But breathes forth a perfume, so sweet on the air.

True emblem of those, who by nature, aspire not,
For the laurels, adorning, the gifted one's brow,
But like the fragrant flower, their influence gentle
Is felt in the homes, by their presence endowed.

—*Mrs. C. S. Müller.*

Correspondence must in all cases be brief and to the point.

Subscriptions must begin with the January, April, July or October number and expire with the year.

Changes of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

NOVEMBER, 1889.

PATRICK FENNEL—"Shandy Maguire"—delighted the Denver Convention B. of L. E. with an "original poem." It is needless to say that "Shandy" was equal to himself, and that he is like some gold mines in the world, the more you work them the richer they become.

MASTER MECHANIC S. W. WAKEFIELD, enjoys the satisfaction of having the confidence and esteem of all his employes. Our members at Keokuk speak of him as a thorough gentleman, as well as competent and obliging official. Such men as Mr. Wakefield are an honor to the railway service.

ANGUS SINCLAIR, Secretary of the American Railway Master Mechanics' Association, and Editor of the *National Car and Locomotive Builder*, sailed for Europe on the 25th of September, to be absent, as we are informed by circular, seven weeks. We wish Mr. Sinclair a pleasant tour, and shall look for his views of European railroad affairs with no little anxiety.

C. N. GILMAN, Esq., Division Superintendent of the C., R. I. & P., and his assistant, J. C. Cooms, Esq., have the thanks of the members of Gate City Lodge, No. 93, Keokuk, Iowa, for the courtesy of a special train on the occasion of the union meeting recently held in that city. J. G. Sickles, Esq., Train Master of the K. & W., had a special car attached to the regular train on the same occasion, for which the boys are deeply grateful. Such courtesies inspire the warmest feelings between officials and employes, and are fruitful of much good.

We have received from the Standard Steel Works, of Philadelphia, a paper weight in the shape of a locomotive driving wheel, which is an iron casting so treated that it will not rust. As a paper weight it fills the bill, and is a constant reminder of the steady advance made in the treatment of iron to meet the demands of this wonderfully progressive age, and it goes without the saying that the Standard steel works is in the van of the procession.

THE Brotherhood of Locomotive Firemen feels a just pride in knowing that its official organ is in demand by men whose good opinion is of great value. This view of the subject is strengthened by subscriptions from such widely and favorably known railroad men as Day K. Smith, Esq., Supt. Kansas City Railroad Company, and others of equal prominence. The *Magazine* is moving along in the even tenor of its ways, and the members of our Order would find it in many ways beneficial if they would roll up their sleeves and work for its still wider circulation.

We publish elsewhere in this issue of the *Magazine* a paper written by General Master Workman Powderly, and published in the *Journal of United Labor*, the official organ of the Knights of Labor, and invite the readers of the *Magazine* to give it a careful perusal. The arraignment of Austin Corbin, the Philadelphia & Reading Railroad, and the aiders and abettors of crime in Pennsylvania is terrific, and as true as it is severe. The country stands in need of such literature, and Mr. Powderly's talents, and they are of a high order, were never better employed than in excoriating such masked scoundrelism as prevails in Pennsylvania.

We are under obligations to Hon. Charles F. Peck, Commissioner of the Bureau of Statistics of Labor of the State of New York, for the Sixth Annual Report of the Bureau, a volume of more than one thousand pages, filled from cover to cover with statistical tables and valuable comments upon the same. Bureaus for the purpose of obtaining statistics relating to labor are now, not only a part of the governmental machinery of States, but also of the National Government, and, as a result, facts are being obtained and arranged in a way to exert a powerful influence upon legislation. The New York Commissioner is among the most laborious and methodical of the Chiefs of Bureaus, and the industries of the Empire State are being classified in a way that will serve a most valuable purpose. We shall, as opportunity offers, consult the pages of Mr. Peck's report for the purpose of giving the readers of the *Magazine* the benefits of his figures and mature conclusions.

THE BROTHERHOOD OF RAILWAY CONDUCTORS.

The First Annual Convention of the Brotherhood of Railway Conductors was held in the city of Los Angeles, commencing September 16th, 1889.

To say that the Brotherhood has achieved wonderful success is stating the case mildly, and this success the *Firemen's Magazine*, though boasting of no special prescience, saw from the beginning. The situation demanded the organization. The field was inviting. The Order of Railway Conductors did not meet the demand of the times; it was not in harmony with the spirit of the age. In moments of supreme necessity it did not meet requirements. Great it may be; virtuous it may have; good it may have accomplished. Good men are in its membership, but wanting in sympathy with the toilers on train and track, another order was demanded, and it came. Its coming was inevitable. Some mistakes are fatal. It does not help the matter to say, "it is human to err." It is quite as human to correct errors, and those who will not see them nor correct them, but blindly and obstinately pursue their mistaken course, must eventually go to the wall. The idea of aristocracy in labor is to be everlastingly ostracized. Workingmen are resolving to fraternize; to unify and federate. The edict has gone forth—all educational forces are moving on converging lines and the day of labor's redemption draweth nigh.

The Brotherhood of Railway Conductors was wise enough to see the point. It comprehended the situation. It grouped the facts and mastered their significance. From the first it was in line with the logic of events, and as a result, its first annual convention triumphantly demonstrated the wisdom of its councils and the strength of its influence.

When the roll of delegates was called the following representatives answered to their names:

C. L. Houghwout, Ashland, Wis.
H. C. Christenot, San Antonio, Tex.
F. F. Deyol, Los Angeles, Cal.
W. J. Tyrrell, Los Angeles, Cal.
H. G. Vavasour, El Paso, Tex.
W. S. Ford, La Grande, Ore.
E. C. Sumner, Tucson, A. T.
F. W. Travis, East Syracuse, N. Y.
William Mattison, Toledo, O.
W. H. Sheasby, San Bernardino, Cal.
R. C. Crawford, Portland, Ore.
A. C. Graper, Roodhouse, Ill.
C. L. Hartt, Los Angeles, Cal.
T. J. Heuser, Winslow, A. T.
Harry Hart, Pueblo, Col.
J. J. Donnelly, Raion, N. M.
D. H. McEntyre, Oakland, Cal.
W. W. Berry, Minneapolis, Minn.
W. P. Hathaway, Garrett, Ind.
J. J. Nelson, De Soto, Mo.
W. T. Strout, La Crosse, Wis.
J. C. McCulloch, Dennison, Tex.
E. B. Sprague, Fort Scott, Kan.
H. Kilduff, Sprague, W. T.

H. E. Stephens, Dubuque, Ia.
J. J. Murphy, Louisville, Ky.
J. Phalen, Ogden, Utah.
W. E. Brown, St. Paul, Minn.
W. L. Moore, Missoula, Mont.
R. D. Patton, Springfield, Mo.
Mr. G. Beckley, West Bay City, Mich.

In connection with the foregoing list of delegates the names of the charter members of the Grand Division are given, as follows:

Thomas Agan, N. H. Beebe, A. J. Bennett, J. S. Bachman, J. P. Barney, N. J. Bigelow, C. H. Brickner, D. J. Carr, F. W. Craven, F. E. Chamberlain, J. F. Calbreath, O. A. Clough, C. F. Calnes, J. N. Downing, J. F. Darbin, W. A. Dunn, F. T. Devol, G. W. Eddy, S. F. Eggleston, E. B. Elliott, S. Elliott, W. E. Ellsworth, J. F. Fuller, J. M. Fisher, C. A. Flood, S. P. Hunter, J. E. Hartell, J. B. Harrison, F. L. Harris, E. T. Haggin, S. L. Humporeys, L. House, G. W. Howard, F. M. Havens, C. L. Heartt, W. H. Johnson, D. J. Jones, J. N. Kincaen, C. S. Lemon, E. B. Leonard, F. E. Langdon, W. O. Moller, A. W. McLean, William McFarland, Charles T. Moore, James Milligan, J. F. McCarthy, S. W. McDaniel, George A. McElroy, Thomas McCord, D. McMurray, A. H. Miller, C. H. Newbit, F. F. Nance, G. H. Nutting, L. B. Nolton, G. H. Nolton, W. A. Osgood, R. Payne, H. R. Putnam, N. Pelun, J. F. Ramp, J. C. Reeder, J. C. Ross, F. H. Seelev, L. P. Sheppard, G. F. Taber, W. J. Tyrrell, W. M. Usher, T. H. Varney, W. W. Wallace, John Weber, F. B. Whiteside, J. C. Wiley, Wm. Willetts, L. A. Wood, F. B. Willetts, A. L. Wiley, J. G. Ward, Z. Vall, Fred McClelland, John Hallahan, J. H. Detrick, Charles F. Prudhomme, E. Kennedy, T. J. Dudleson, A. R. King, A. A. Neil, F. M. Worthington.

At the proper time, the election of Grand Officers being in order, the result was announced as follows:

Grand Chief Conductor, Geo. W. Howard, of Evanville, Ind. (re-elected.)
Assistant Grand Chief Conductor, Charles Moore, of Los Angeles, Cal. (re-elected.)
Grand Secretary and Treasurer, D. J. Carr, of Los Angeles, Cal. (re-elected.)
Grand Senior Conductor, Harry Hart, of Pueblo, Colo.
Grand Junior Conductor, J. J. Nelson, of St. Louis, Mo.
Grand Inside Sentinel, W. S. Ford, La Grande, Oregon.
Grand Outside Sentinel, G. W. Travis, of Syracuse, N. Y.
Grand Chaplain, C. L. Houghwout, of Ashland, Wis.
Executive Committee, J. G. Ward, W. M. Usher and W. H. Sheasby, of Los Angeles, Cal.

By a vote of the convention, the next annual convention will be held in Toledo, O.

The report of the proceedings in the *Railway Service Gazette*, which was declared the official journal of the Brotherhood, shows that the delegates were the recipients of many courtesies in the way of excursions, etc., and that the convention was harmonious throughout.

The reelection of Col. George W. Howard as Grand Chief Conductor, was not only a merited compliment, but was an act of wisdom, which signifies continued growth and prosperity, and the same may be said of D. J. Carr, Esq., the efficient Grand Secretary and Treasurer.

A HIGH HONOR TO THE B. of L. F.

Beyond the boisterous Atlantic, in England, whose history is resplendent with achievements in every department of literature and art, mechanical device and commercial supremacy—the home of Watt and Stephenson—there exists an organization known as the “Associated Society of Locomotive Engineers and Firemen.”

In a land of recognized aristocrats, of Dukes and Lords, and “a” that, we are proud to say the virus of such ideas does not enter into the Association of Locomotive Engineers and Firemen. These men of the “Foot-plate” stand upon a level—and in this regard teach Americans a lesson of Democracy of splendid significance.

This Society has paid the Brotherhood of Locomotive Firemen a high honor, a splendid compliment. It has made F. P. Sargent, Grand Master of the Order, J. J. Hannahan, Vice Grand Master of the Order, and E. V. Debs, Grand Secretary and Treasurer of the Order, honorary members. Let it be understood that the named Grand Officers of the B. of L. F. accept the distinction conferred upon them as an honor to the Brotherhood they in some measure represent. And that our readers may know in what felicitous terms this honor is conferred, we introduce the following official letter:

ASSOCIATED SOCIETY OF LOCOMOTIVE ENGINEERS
AND FIREMEN, HEAD OFFICE, 44 PARK SQUARE,
LEEDS, ENG., September 13, 1889.

Messrs. Sargent, Hannahan and Debs:

GENTLEMEN—Your favor of July 31st was laid before the Executive Council on the 25th ult., the contents of which gave them extreme pleasure, and by your kind acceptance of *Honorary Membership* in our Society, we feel that we have objects and sympathies in common, and that, although such a wide expanse of ocean does separate the two Associations, that we are with each other in spirit, and we fervently hope that the good feeling existing between us may continue so long as the organizations shall endure. In reference to your enquiries respecting our order, we forward you Copy of Rules, Balance Sheet for 1888, and September number of our *Journal*, and trust that we may from time to time have an interchange of ideas on the best means to be adapted for bringing about a better feeling between capital and labor, and the promulgation of that spirit of unity which we feel is so necessary in the interests of men whose calling is of such a responsible and hazardous nature. Trusting therefore that the step now taken may be the means of more closely cementing that bond of friendship and brotherly love which we feel assured is reciprocal between the Knights of the Foot-plate in the old country and America, and we have now great pleasure in asking your kind acceptance of the Emblem of our Order with the names of the Grand Officers of your Association inscribed thereon, and conclude by hoping that we may hear from you frequently, and beg to remain on behalf of the Executive Council, Yours fraternally,

THOMAS G. SUNTER, General Secretary.
THOMAS BALL, Assistant Secretary.

We should be pleased if every member of the B. of L. F. could see the artistic beauty of the Emblems of Honorary Membership,

in colored lithograph, the “key to the emblem” being specially expressive and replete with instruction.

We are also in receipt of the *Associated Society of Locomotive Engineers' and Firemen's Journal*, and find its pages filled with instructive matter. A copy of the “Revised Rules of the Society” explains fully its government, and the “Annual Report and Balance Sheet” for 1888 discloses the fact that every detail of the business of the society is attended to with the most exacting care.

To be an honorary member of such a society is a great honor, and one which we fully appreciate, not only for ourself but for the Brotherhood of Locomotive Firemen.

On August 15th., Mr. John Dolan, Master Workman Lake-Faring Men's Assembly, of Milwaukee, Wis., addressed the following communication to a Milwaukee newspaper:

MILWAUKEE, WIS., August 15.—To the Editor: Be kind enough to print the following: United States Marshal law in Milwaukee. Last Friday, August 8, the schooner J. G. Masten arrived in Milwaukee from Cleveland. She carried four men before the mast. Those men shipped in Cleveland to come to Milwaukee for \$1 per day, but had not signed articles of any kind. When they came to Milwaukee they found the rate of wages was \$1.75 for sailors, so they left the Masten. The captain would not pay them their wages because they quit the vessel. He could not get men to go for less than \$1.75 per day, and said he would not pay that figure, but stated he would make his men go back for the same wages.

The men came to the Master Workmen of the Lake Faring Men's Assembly and stated their case. The Master Workman went to Capt. Parker of the Masten and asked him to pay the men. He refused. He then went to the United States Marshal and claimed protection for the men, but met with no encouragement. Capt. Parker also went to the Marshal and wanted the men put on board the vessel again. Thereupon United States Marshal West put the men in prison till the vessel was ready for the lake and forced the men on board again for same wages they had on leaving Cleveland—\$1 per day. Sunday last they were taken before Commissioner Blodgett, and he told them they must go on board for the same wages or go to jail. The men stated that they wouldn't go on board of the Masten and that they had signed no articles to compel them to proceed any further on her, but that was of no avail and back they had to go to the vessel. If this can be done there is no protection in the United States for a sailor.

JOHN DOLAN,
Master Workman Lake-Faring Men's Assembly.

If, after reading the foregoing manly protest against an act of unmitigated tyranny, the blood of all honorable men does not become boiling hot with honest indignation, then it were supreme folly to talk about liberty of any sort, and all our boasting of equal rights, independence, etc., is of no more consequence than the gabble of geese. The Czar of Russia or the Sultan of Turkey could not have perpetrated a greater wrong than was inflicted upon the sailors at Milwaukee by a United States Marshal. If such things can be tolerated, then indeed is the United States of America Russianized.

A PLEA FOR SAFETY AND FOR SUNDAY REST OF R. R. EMPLOYEES.

DEAR SIR:—The accompanying article, a plea for safety, for Sunday rest for R. R. employees is sent to each known address of every religious paper in the nation. The writer was one of the railroad commissioners of Iowa, from May 1, 1883 to April 1, 1888. As said in the article the law of this state requires the railroads to report all accidents to persons to the commissioners.

So great was the number of train men injured and killed by coupling cars and falling from trains, this last coming from being compelled to go on top of cars to set the hand brakes, that the writer felt it his duty to give this matter a thorough investigation leading to a remedy.

The result of months of exhaustive investigation and experiments is embodied in the article sent you for publication.

It may be proper for me to state that I have scrupulously kept free from any mercenary interest whatever in any device or patent for safer couplers or brake. My only and whole object is to awaken a public interest by simply stating reliable facts that will by moral force compel railroad owners to properly equip their cars for greater safety to their employees and also to give them Sunday rest, or, if found necessary, to have this aroused public sentiment crystallized into suitable state and national laws requiring these things so reasonable and just to train men.

The discipline in railroad circles is such that these men do not for obvious reasons come before the public and speak for themselves. Somebody must plead for them. In the name of over 100,000 brakemen I ask most respectfully that you take up this cause and either editorially lay their case before the public or use the accompanying article or such of its statements as you may think best.

Rest assured the thanks and the most appreciative gratitude of as grand a class of wage workers as the country holds will be yours for any space you may devote to this great work. Probably the writer is already sufficiently known to the public press by his labors in the behalf of these men and their bereaved families, or by his agricultural writings, to secure you against any fear of impopularity.

If any references are desired he could refer to our senators and all of our representatives in congress, to the First Assistant Postmaster General Mr. Clarkson, or any of our officers.

Hoping and trusting you will do all you can to help along the much needed work I am most respectfully,

Your Servant,

L. S. COFFIN,

Ex. R. R. Commissioner, Fort Dodge, Iowa.

The accompanying article, "A Plea for Railroad Employees," is as follows:

TO THE EDITOR:—Will you permit me to appeal through your columns to a christian and humane public for a united effort to remedy two great wrongs done to a very deserving and now indispensable class of public servants. I refer to the deprivation of Sunday rest and its privileges to railway men, and the lack of suitable and reasonable safety appliances on engines and freight cars, causing by this lack in this nation an untold amount of death and suffering to train men, especially to brakemen and yard men.

"The Sabbath was made for man," so said He who spake as never man spake. The Sabbath would not be needed only as man's good requires it. Hence if no man there would be no Sabbath. Let us first then endeavor to stay this great loss of life and limb to railroad men and then secure to these saved men the Sabbath.

Note these startling facts. In the Railroad Gazette, published in New York, issue of April 28 last, is found this statement: "A calculation based upon accident returns in the reports of State Commissioners indicates that every year some 2,700 able bodied men are killed and over

20,000 injured in the discharge of their duties as employees of the railroads of this country."

This statement stands unrefuted. This, of course, includes deaths and injuries from all kinds of railroad accidents. My special purpose at this time is to call attention to only two causes, or kind of accidents, resulting in death and injury to train men, those that come from coupling and uncoupling cars, and from the continued use of the old hand brake on freight cars. What part of this great number of 2,700 killed and 20,000 injured yearly comes from these two causes alone in the nation at large, I am not able at this writing to say, but I can furnish reliable statistics as to this matter as far as the State of Iowa is concerned. (It may be proper to say here that the writer was one of the Railroad Commissioners of this State for nearly five years.)

Our commissioner law has been in force for ten years. This law requires railroad companies to report all casualties and their kind to the board. In these ten years there have been killed and injured in this State by the link and pin coupling and hand brake alone, 2,426 strong, able bodied men, and the great majority of them young men.

When these reports from the railroads commenced we had about 4,000 miles of road, we now have a little over 8,000. The report of the Commissioners for 1888 shows 352 killed and injured by these two causes alone in this State last year.

We have in this nation now rising 150,000 miles of railroad. If the same death rate and injury holds all over the nation as in Iowa (and we have reason to believe it is greater) there are not less than 6,600 of these young men ground to death under the cruel iron wheels or caught between the cars and more or less crippled for life each year in this country.

This is indeed a fearful statement, and owe the general public will be slow to believe just because of its awfulness. Nevertheless it is too awfully true. I am under rather than over the true facts. Railroad experts tell me I should make my calculations on the number of engines in use, rather than on the miles of road in the State. There is good reason for this. Then again Iowa is a temperance State. Her railroad men are almost universally temperance men. Our trains are handled by sober men, but be that as it may, here are the astounding facts, 352 either killed or injured in the State of Iowa last year, and on this most favorable calculations, 6,600 in this nation by these two causes alone. But why single out these two things, viz, the old link and pin plan for coupling cars and the old hand brake for controlling the trains?

Of course I do this for a purpose. I am aware of the fearful import of my words when I now deliberately say that for all this inexpressible suffering and all these tragic deaths to these brave men there is no valid excuse. It is wholly unnecessary and can almost all be prevented.

I shall carry every honest thinking reader with me when I ask them if they ever now see brakemen on top of passenger cars handling the brakes? Or how often do they hear or read of a brakeman being killed in coupling passenger cars? Why is this? Simply because these cars are equipped with safety or mechanical couplers and with power brakes which latter are controlled by the engineer in his cab.

It is now proven beyond all shadow of doubt that automatic couplers and power brakes are as practically applicable to freight as to passenger cars and would prove to be an actual saving and economy in operating a railroad, for without considering the delays, expenses and damages arising from continual wreck, the sum of money paid out annually by the railroads to partially alleviate the suffering of these injured men and their families is greater than the cost of the safety appliances.

While on the railroad commission the writer spent weeks, yes months, on experimental trains with the ablest railroad experts for the very purpose of ascertaining the practicability of using the automatic couplers and brakes on freight

cars, and, as said above, every doubt was removed and so admitted by the railroad experts who as a committee from the National Master Car Builders Association had these experimental tests in charge and they so reported to that body. Here then is the point I wish to make emphatic before the public mind:

This "absenteeism" in the ownership of our railroad property as a rule has the effect of making these owners insensible to the dangers to life and limb to which our citizens engaged in the railroad service are continually exposed, and they are made to stand before the public as heartlessly weighing the terrible suffering from loss of the lives and limbs of railroad men, together with the crushing grief of wives and mothers, against the few paltry dollars of outlay it might take to equip their engines and freight cars with the safety appliances now admitted to be not only practical but in the end economical.

No matter how humane the general officers and management may be, or how willing to put on these life and limb saving appliances, they are powerless to do so only as the boards of directors vote to appropriate the money for this special purpose.

All who are any way familiar with the temper of most boards of railroad directors are aware that the great demand from them upon the managers of their property is for "dividends." They are very slow to listen to anything from these managing officers that calls for a considerable present outlay of funds. These presidents and general managers want to be reinforced when they go before the boards by a "public sentiment" or a "thus saith the law." While some of the roads are doing something toward applying these safety devices, our appeal is to boards of directors and managers of all railroads and to the legislators, both state and national, to give this humane subject their first consideration.

It is with the public to say whether this shall be done or not. So common is this killing of brakemen the public have come to think it an inseparable part of railroad transportation. Must these poor fellows by the thousand yearly be sacrificed on the altar of the penuriousness of owners of railroad property?

It is almost beyond belief that the public has sat still and allowed this terrible price to be paid year after year and made no protest. The time for any excuse is now past. Time was when an engine without a "driver brake" on could be called finished and put to work on the road—an almost unmanageable thing—not so now. Time was when freight cars without automatic couplers and power brakes could be called finished and be put to service, with all their death dealing appliances—not so now.

The great humane and Christian public when once aroused by a knowledge of those terrible facts which disgrace our railroad age, will not longer sit still and allow cars to be built four-fifths wood and iron and the other fifth the mangled flesh and broken bones of these train men engaged in railroad service.

There is not a railroad director in America that would for all the railroads in the nation do duty as a brakeman one single night on the top of these trains. Why! It will be looked back upon as one of the most inhuman things of this civilization, to compel a human being to the exposure as is done every day and every night in ten thousand cases, on the top of these fast moving, swaying trains at all hours of the night in storms of snow and driving sleet and ice, to go from one end of the train to the other over slippery decks to set up the brakes.

We have a society to prevent cruelty to dumb animals, but here is a refined cruelty practiced on 100,000 brakemen in this nation every day, and no one opens his mouth in protest.

Now one more plea and I am done. I come now to the Christian conscience of the public. Is it not enough that these brave and faithful men serve us night and day in summer's heat and winter's cold, always at their post, always "on time" if it be in the possibilities—is it not

enough I ask, that these men serve us six days and six nights without their being compelled to give up the hours of the Sabbath to this same exacting public? Perhaps railroad work on the Sabbath is not so prominent in the east as here in the farther west. Unless one has given attention to this point he would be surprised at the amount of freight train work there is done on the Sabbath. The writer was at a station in this state on Monday morning one day a year ago last winter, and on looking at the register he saw that 84 trains had registered there the day before. This was on one road—84 trains on Sunday in the country too—Think for a moment what that means. How many men that takes from their homes on the hours we all so much prize as rightfully our time—as hours to be with our families at home, at church, at the Sunday school, or where we can get the most possible rest or good and do the most for humanity.

Yes, next to saving the lives and limbs of these faithful and uncomplaining men of the rail, this question of rest on the Sabbath to these same men—this stopping the rolling of tens of thousands of creaking iron wheels over the steel rails, and shutting off the scream and shriek of the steam whistle that so grates upon nerves of good people everywhere on this day we all have been taught should be kept holy, is one of the most important questions that confronts the Christian public of America to-day.

The great corporations must be brought to observe this one day in seven as private persons do, or the Sabbath will surely be lost to us as a people.

In the exigencies of railroad transportation and commerce of a great nation like ours, there will be—there inevitably must be—more or less of Sunday work imperative. Our plea is for the rule, "Sunday rest for train men." Think of it, Christian men, and Christian women, of America! Have we not ignored and shut out from our Christian sympathy, and from the bonds of universal brotherhood, to a very great extent, unthinkingly it may be, but none the less cruelly and inexcusably, this great army of the most faithful an uncomplaining class of wake workers, who have served the public at such a terrible cost of death and suffering?

In the name of the Christian humanity of this nineteenth century I bring the claims of these men before the public and ask for them what we would ask for ourselves were our cases theirs.

L. S. COFFIN, Fort Dodge, Iowa.

We deem the forgoing article as specially valuable and opportune. Mr. L. S. Coffin, the writer is widely known as an advanced thinker, and as a man profoundly interested in the welfare of Railroad employes, and we bespeak for his article a careful perusal by the patrons of the *Magazine*.

We are indebted to Messrs. G. P. Putnam's Sons, of New York and London, for a copy of a book by Charles Whiting Baker, C. E., associate editor of the *Engineering News*, entitled, "Monopolies and the People." At this writing, we have been able to give the book only a cursory examination, but at an early day we propose a more extended notice with quotations from its valuable pages showing the monstrous and cruel wrongs of monopoly. The volume appears at an opportune time and to the extent of our ability, we propose to popularize its main facts and arguments.

THE BROTHERHOOD OF RAILROAD BRAKEMEN.

On Monday, October the 14th, the great Brotherhood of Railroad Brakemen began its Sixth Annual Convention at St. Paul, Minn., under the most flattering auspices. The weather was simply superb and the street parade was all that the most ardent friends of the Brotherhood could desire. Nothing went amiss. Arrangements were perfect, and order everywhere prevailed. In the procession was a large number of carriages, containing officials and distinguished guests, and in the ranks were to be seen firemen, switchman and conductors. The music was inspiring, and badge and banner helped to make the demonstration specially delightful.

The evening meeting at the Armory was, in point of eclat, fully up to the street demonstration. The great hall was densely packed and the ladies formed a conspicuous part of the audience. Not only railroad men were present but representatives of the various workmen's organizations, including Knights of Labor.

The speakers for the occasion, occupying seats on the stage were: Messrs. Grand Master S. C. Wilkinson, of Peoria, Ill.; First Vice Grand Master Edens, of Bucyrus, O.; Grand Secretary and Treasurer, E. F. O'Shea, of Galesburg, Ill.; F. P. Sargent, Grand Master of the Firemen's Brotherhood, of Terre Haute, Ind.; Father Jewett, of Boston; L. W. Rogers, editor of the *Brakemen's Organ*, of Galesburg, Ill.; T. T. Slatery, of Butte, Mont.; L. L. Coffin, ex-Railroad Commissioner of Iowa; Mrs. Dr. Ingalls, of Chicago; Mrs. H. P. Jones, of Washington, Ind.; Archbishop Ireland, Acting Mayor Yoerg, Judge J. J. Egan and Gen. Becker, of St. Paul.

The Chairman of the meeting, Gen. G. S. Becker, introduced the Right Reverend John Ireland, Archbishop of St. Paul, who offered up an impressive prayer, after which Gen. Becker delivered the opening address, and was followed by Alderman Yoerg, who tendered the Brakemen a generous welcome to the city. Judge Egan followed Mr. Yoerg in a felicitous address, and among other things said:

"Minnesota, the North Star State, the land of sky tinted waters, greets the brakemen of America. Rich in agricultural soil of boundless fertility, rich in contented homes and a prosperous state of society, she welcomes you. St. Paul, the fairest, the proudest, the richest and the most picturesque city in the world, shakes hands with you this evening, and says it is honored by the presence of future presidents of railroads. St. Paul the railroad center of the Northwest, with 264 trains, passenger and freight, daily coming and going from the Union depot, welcomes you to her house. Fair weather greets you; Providence and civilization approve the ties which bind you together. You meet in the very center of the American continent—the future capital of North America.

Archbishop Ireland, was the next speaker,

and the learned prelate said many things well calculated to revolutionize thought upon labor topics. We quote:

The reverend prelate proceeded to condemn the false political economy of a few years ago, which consigned the laboring classes to mere working machines. Society could not endure such a state of things, and it was the most anti-Christian practice that could be brought in among men, for this was the teaching of the Christian religion and the basis of true civilization—that man was not a machine, was not an animal—he was a creature of God, put upon this earth to fulfill His mission; and God gave the earth to His children, to all of them so far as necessary and as far as practical circumstances would permit the use of it. If some were to have more than others, others were always to have at least a sufficiency, and society was bound by the laws of God to see that no man was made to work for a smaller salary than brought him and his family a livelihood, that no man should be compelled to engage in work that led to the destruction of morals, to abrupt shortening of life.

Following Bishop Ireland, Grand Master S. E. Wilkinson, stepped to the front, and delivered a well timed address, thoughtful and instructive throughout. He informed the audience that the Brakemen's Brotherhood now had three hundred and twenty Lodges, and a membership of nearly 20,000. His address, supplied, for the consideration of the audience, many valuable statistics, and was justly regarded as a masterly effort.

Grand Master F. P. Sargent, of the B. of L. F., was introduced, and in responding to the call for a speech, among other things said:

I come to represent a brotherhood of 20,000 men, who have in their hearts a warm spot for the brakemen. I represent the men who wish you the success and happiness your industry and sobriety deserve. The great Brotherhood of Locomotive Firemen is your friend. When your organization was in its infancy the Brotherhood of Locomotive Firemen extended to you the right hand of fellowship and stood ready to assist you. We are your brothers and you are our brothers. Remember that you came not here for any selfish purpose—you came here to represent your brothers.

Under such pleasant auspices the Brotherhood of Brakemen commenced its Sixth Annual Convention. In a subsequent issue, the *Magazine* will furnish its readers with a synopsis of such of the proceedings as find expression in the public prints.

* *

DURING a brief visit to Chicago, recently, we were greatly pleased to make the acquaintance of Mr. H. J. Skeppington, National Secretary and Treasurer Boot and Shoe Workers' International Union, of Boston, Mass. We found Mr. Skeppington thoroughly advised in regard to questions relating to organized labor and actively engaged in promoting the welfare of the Union, in which he holds a responsible office. The Union, contemplates the publication of an official journal, and should Mr. Skeppington have charge of it, we shall expect to see a wide awake and progressive publication.

THE FOURTH ANNUAL CONVENTION OF THE S. M. A. A. OF N. A.

On Monday, September 16th, the Switchmen's Mutual Aid Association began its fourth annual convention in the city of Columbus, Ohio.

The weather was to the last degree inauspicious. The rain fell in torrents and almost continuously. The contemplated street parade had to be abandoned, as also the public meeting, which otherwise would have been addressed by Governor Foraker, Mayor Bruck, Secretary of State Ryan, President Clahane, of the city council, and General Underwood, Grand Secretary of the I. O. O. F.

As all preliminary proceedings had to be dispensed with the business of the convention was at once begun. The *Ohio State Journal* of the 17th reports that the opening session of the convention was held in the City Hall at 2 P. M. About one hundred and fifty delegates and visitors were present, including the grand officers: Frank Sweeney, Chicago, Grand Master; John Downey, Chicago, Vice Grand Master; John A. Hall, Chicago, Grand Organizer and Instructor; William A. Simsrott, Chicago, Grand Secretary and Treasurer; J. W. Callahan, Auburn Junction, Ill.; J. M. Kely, Fort Wayne, Ind.; E. M. Hutchinson, Town of Lake, Ill., and James F. Scullen, Omaha, Neb., Board of Directors. John Walters, President of the Car Inspectors' Protective and Beneficial Association, was introduced to the convention and made a few complimentary remarks. The business of the convention was mostly of a secret nature. The delegates presented their credentials and the preliminary organization, appointment of committees, etc., was effected. Grand Master Sweeney made his annual address, in which he reviewed the work of the past year. Since the last convention about fifty new lodges have been instituted, with a gain in membership of about 2,500. The association has now over 5,000 members.

On Monday evening a grand ball was given at the City Hall under the auspices of Columbus Lodge, No. 22, of the Order, which was a pronounced success.

The festivities over, work began in real earnest. The constitution and by-laws were amended and endowment policies were advanced from \$800 to \$900.

Harmony marked the deliberations of the convention from first to last, and the Order, which has been a marvel of success from the beginning, starts out on another year of work with assurances of renewed prosperity.

The balloting for grand officers, as stated in the *Switchmen's Journal*, resulted as follows: "Grand Master Frank Sweeney, re-elected for one year; Vice Grand Master John Downey, re-elected for one year; Grand Organizer and Instructor, John A.

Hall, elected for one year; Grand Secretary and Treasurer William A. Simsrott, re-elected for two years. Board of Directors—E. M. Hutchinson, re-elected for three years; J. W. Callahan's time does not expire for two years yet; James F. Scullen, re-elected; John E. Wilson and Joseph F. Costell were elected for the one year terms."

The convention, before closing its business, passed a series of resolutions, of which we reproduce the following:

Resolved, That this convention of Switchmen appeal to Judge Cooley, Chairman of the Interstate Commerce Commission, to use his utmost power to cause all railroads in the United States to adopt a standard, uniform automatic car coupler and to protect, and keep protected, by a system of block or other device, all grade rails and frogs. That a copy of this resolution, properly authenticated be forwarded to Judge Cooley.

Resolved, That the Switchmen's Mutual Aid Association of North America, in annual convention assembled, unanimsously favor and endorse the city of Chicago as the proper location of the World's Exposition of 1892; and, furthermore, be it

Resolved, That the Switchmen, individually and collectively, be hereby requested to bring all the means in their power to bear upon their respective Congressmen to give official recognition and sanction to the holding of this great exposition in the city of Chicago.

Resolved, That the Switchmen's Mutual Aid Association, in fourth annual convention assembled, do hereby endorse the measures taken by our Committee of Grand Officers in the federal convention in council in June, 1889; and, furthermore, be it

Resolved, That it is now the desire of our Association to still further strengthen the bonds of federation, and we hereby instruct and implore our brothers to live in harmony, peace and fraternity with each other. Let the motto of the Supreme Council, "Mutual Justice," guide and control us in all our future relations. A federation based upon the rights of man, and far nobler than any similar achievement of ancient or modern times, has at last been consummated, and it is a matter of honest pride with us as Switchmen that our own organization was foremost in this splendid movement.

We congratulate the S. M. A. A. and its heroic officials for the steady advance made by the Order, and upon the cheering outlook which invites it to still greater victories

♦♦

It has rarely been our good fortune to listen to more able, eloquent and logical addresses than those delivered by Hon. John Irwin, Hon. Daniel F. Miller, Jr. and Hon. James C. Davis, at Keokuk, Iowa. These distinguished gentleman displayed exceptional ability in discussing the labor question and held the large audience in wrapt attention throughout the meeting. The *Magazine* takes pleasure in expressing its thanks and appreciation for the services rendered by Messrs. Irwin, Miller and Davis, who contributed so largely to the success of the meeting, and in this, we are confident, we voice the sentiments of all who were so fortunate as to be in attendance.

MEETING OF FEDERATED RAILROADERS.

On Monday, September 30th, and Tuesday, October 1st, the Federated Orders of Railroad Men held a meeting in the city of Pittsburgh. The *Commoner and Glass Worker* says the attendance was large, but would have been greater if the railroads were not in the busiest season they have known for years. F. J. Thomer, of Lodge No. 378, Brotherhood of Locomotive Firemen, presided, and Charles Brown, of Lodge No. 178, Brotherhood of Railroad Brakemen, was secretary. Ten lodges of the firemen, brakemen and switchmen were represented, the total membership of which is between 2,000 and 3,000 organized railroad men.

During the first day's proceedings the following resolutions were unanimously adopted:

WHEREAS, In this age of development and organization among railroad men, with a first step taken toward a federation of interests of all railroad men, and with a future opening before us that means great benefit to all the railroad men engaged in the transportation branch of the service, we recognize the necessity of a closer relationship, as well as a means of communication among ourselves, and

WHEREAS, No method exists so powerful for good, for the moulding of public opinion to the true aims of organization, and the defense of our interests when imperiled as the press, and

WHEREAS, We have with satisfaction noted the growth of journalism among papers devoted to the interests of those who toll that they may live, and

WHEREAS, One of the ablest and best, as well as one of the widest circulated labor papers published, the *Commoner and Glass Worker* has been watchful of our interests, and has become a welcome weekly visitor to many of our railroaders' homes, be it

Resolved, That this union convention of railroad firemen, brakemen and switchmen, representing 3,000 railroad men in Allegheny County, endorse the *Commoner and Glass Worker* as the independent organ of organized labor, and that the secretaries of all lodges and unions be requested to furnish to it such news as should be published, and

Resolved, That we urge upon railroad men in general to subscribe for the paper and thus help in making it a greater power for good than it now is.

The compliment to the *Commoner and Glass Worker* was well deserved, and shows that workingmen are both watchful and appreciative.

The following resolution, voicing fraternal feeling, was unanimously adopted:

WHEREAS, Labor, when thoroughly organized in crafts, is strong within itself, but no stronger than its one craft, and realizing that organization cannot be carried to too great an extent, and

WHEREAS, The railroad men have now succeeded in effecting an organization of some of their orders into a united body, we feel that we can go still further; therefore, be it

Resolved, That we extend the hand of fraternal greeting to all organizations, no matter what their occupation, and pledge them that hereafter the railroad men will be found to the front in every general movement intended to benefit labor.

At a public meeting held on Tuesday a number of spirited addresses were delivered.

Grand Master Sargent, of the B. of L. F., having been called to Boston on urgent business, Hon. Thos. M. Bayne took his place on the rostrum, and in his address assured railroad men that the public were alive to their welfare, and that Congress would aid them in their desires in good time.

The *Commoner and Glass Worker* reports the address of others as follows:

W. G. Edens, first Vice Grand Master of the Brotherhood of Railroad Brakemen, the only general officer from a distance present, was the next speaker. He dwelt particularly on the objects of the Federation and the Brotherhood of Railroad Brakemen. Though the Brotherhood is but six years old it has expended \$562,000 to the widows and orphans of its members, the victims of the railroad service. Of this amount 75 per cent was for deaths and disabilities caused by poor brakes and couplers. The request for automatic brakes and couplers was being heeded; the Inter-State Commerce Commission had taken the matter up, and it was to impress on the public the necessity of their universal adoption that these union public meetings of railroad men are being held. The social improvements resultant to the organization of the Brotherhood were many, for vicious habits were wiped out in many instances, and the happy homes throughout the land are best testimonials of the success of this feature of the organization. The idea of federation is not to destroy the autonomy of the separate Brotherhoods, but to prevent strikes except as a last resort. As the organizations have been, it requires the sanction of the highest officers to precipitate a strike, but now, with a Supreme Council made up of the officers of the various Federated Unions, strikes are almost impossible, because the Supreme Council must sanction them to make them legal. If the Council, however, legalized a strike, every federated employee on the road will strike, and not only one union as heretofore. The Federated Unions believe in mutual justice, but want the golden rule to be applied both ways. The United Orders, however, are not agitating trouble, and will never be the first to inaugurate it.

John C. Glenn, of the Brotherhood of Railroad Brakemen, was the next speaker. He is a leader still in the harness on the railroad. In opening his talk he referred to the assistance the Brotherhood of Firemen had given the Brakemen in the inception of the latter's Brotherhood, especially in cloning the services of the Grand Secretary of the Firemen, Eugene V. Debs, who, he says, can appropriately be called the grandfather of the Brakemen's Union. After reciting a concise history of the origin of the Brotherhood of Railroad Brakemen six years ago, he touchingly referred to his own experience as financier of his lodge, whose duty it was to hand over the aid of the Brotherhood to the widow and family of the deceased or malnourished brothers. "If any brakeman could see the look of anguish disappearing from the face of a sorrowing wife, and one of hope and gladness take its place," said Mr. Glenn, "when our \$1,000 was handed over he would no longer hesitate to become one of us." The social influence of the organization had been marked for the better. The members are brotherly and fraternal now, and the laws of the Order, which are inflexible respecting sobriety, have done more to create a temperance class of workmen than the most rigid rules of a railroad company. Referring to the general misconception of the responsibility for strikes, the speaker said the strikers were not held responsible for success or failure, but their leaders were. This made the leaders conservative, and it has now become the case that a strike is almost an impossibility.

The meeting was in all regards a success,

and so well were all pleased who attended it that another meeting of the same character was ordered for the second Sunday in November.

The Orders of railroad employes which have fed-rated have only words of high commendation for the movement. Federation is steadily growing in favor. It means honorable peace, and war when all honorable means for peace have been absolutely exhausted. The time is not distant when railroad officials will discover in federation their security from unrest that is at all times a source of embarrassment.

FEDERATION.

Rev. Myron W. Reed, in his speech at the great B. of L. E. meeting, at Denver, Oct. 16th, among other things, said:

Robert Burns was born more than 100 years ago, and Jesus Christ was born nearly 1,900 years ago. One said, 'One is your Master, even Christ, and all ye are brethren.' And the other, born in an intolerant bigoted age, said;

"Then let us pray,
That come it may,

A come it will for a' that;

That man to man, the world o'er
Shall brothers be for a' that."

One man alone is so feeble, men in mass are so mighty. Man alone is so much force. Multiply the individual by 100 and you have so much force. Now group the 100 individuals into a company. Fill them with the same thoughts and purposes and you have a new kind of force. It is the force of the mass, the spirit of the corps. When any man anywhere calls another man comrade there is a new force in the world. To-day the individual is helpless, except as he belongs to a company; companies are associated together in trusts and syndicates. Syndicates and trusts will by and by realize their manifest destiny by absorption in the great trust of the nation, the universal partnership of the people. All the prophets, from Isaiah to Tennyson, tell us of a time

"When the war drums throb no longer,
And when the battle flags are furled,
In the parliament of man,
The federation of the world."

It would be difficult to put federation in a stronger light. Mr. Reed has furnished texts for all who favor federation. Every word contains a volume. All honor to the clergyman who, in such a place, and under such surroundings, preached the gospel of federation.

We have received the Fourth Annual Report of the Commissioner of Labor, Hon. Carroll D. Wright, devoted exclusively to statistics concerning working women in large cities. The investigations include twenty-two large American cities, and wages are given as ranging from \$4.31 to \$6.91, or an average of \$5.24 per week. The report will be accepted as authority, and will serve a valuable purpose when persons desire to have correct information upon subjects of which it treats.

G. W. HOWARD.

At the late convention of the B. of R. C., held at Los Angeles, Cal., Col. Geo. W. Howard was elected to succeed himself another term; a wise act and a deserved compliment. This action of the Los Angeles convention made it necessary for Col. Howard to resign his responsible position of Master of Transportation of the Mackey system a position he had filled to the entire satisfaction of the management of its President, as the following general letter fully demonstrates:

EVANSVILLE & TERRE HAUTE RAILROAD CO.,
OFFICE OF THE PRESIDENT.
D. J. MACKEY, President.
EVANSVILLE, IND., October 13, 1889.

To Whom it May Concern:

George W. Howard, Esq., who has been the Master of Transportation of this Company up to the present date, has tendered his resignation, which I have reluctantly accepted. Mr. Howard's work has been very acceptable. He is a gentleman of great energy and very fine ability, and should Mr. Howard desire to enter the railroad service again, or in any commercial pursuits, I can cheerfully recommend him for any position which he might seek to enter.

Very respectfully,

D. J. Mackey,
President and General Manager.

In addition to the foregoing we are permitted to print the following private letter to Col. Howard from President Mackey. It is to the point, and leaves nothing to explain:

EVANSVILLE, October 8, 1889.

George W. Howard:

DEAR SIR:—Your note of resignation is received and is a surprise, but of course I shall not enter into details as to what you state of the B. R. B., or seek to deter you from so doing, but I shall feel that you make a great mistake. I thank you for your words of kindness, and can only say that you mouth my feelings, and that you can always depend on me when you need a friend. I regret your action for my own sake. I regret it because I will now have to do business with a stranger, for I shall now turn in my need to strangers and seek for my aid in this direction.

D. J. Mackey.

G. W. H.—It escaped me to say last night that I thank you kindly for your offer to wait till I got some one in your place, or to thank you for your offer to help me get some one. I have two men in view. One of them will be here soon, Mr. Hurd, of the Wabash.

OCTOBER 9, 1889.

D. J. Mackey.

The foregoing suffices to show that Col. Howard leaves the Mackey system enjoying the confidence and friendship of Mr. D. J. Mackey, its President. Such endorsements are of great value to a man in the position occupied by Col. Howard, and will aid him in pushing forward the interests of the Brotherhood of Railroad Conductors, which, when it meets in annual convention at Toledo in 1890, will be found to have expanded to commanding proportions.

AMERICAN FEDERATION OF LABOR.

Samuel Gompers, Esq., President of American Federation of Labor, under date of October 15th, has issued the following call for the Boston Convention:

NEW YORK CITY, October 15, 1889.

To the Working People of America:

GREETING:—The Fourth Annual Convention of the American Federation of Labor will be called to order at 10 o'clock on the morning of Tuesday, December 10th, 1889, at Well's Memorial Hall, 87 Washington street, Boston, Mass.

In issuing this call, the Executive of the American Federation of Labor take the opportunity of congratulating their fellow-workers upon the remarkable success which has attended their efforts to unite the hitherto scattered forces of labor. It were well, also, on the eve of a convention which will, in all probability, be fraught with important consequences to the future of the labor movement, to recall the circumstances which have called the American Federation of Labor into existence, and made it the most powerful and freest labor organization in the world.

It is well known that the most intelligent and earnest portion of the working class have for years past been seeking to render employment and the means of subsistence less precarious by securing an equitable share of the fruits of their toil. This deep-rooted determination has led the working class of this country to adopt the historic and natural form of working class organization; to establish and defend trade and labor unions. It is not our present purpose to dilate upon the sufferings and successes, the trials and triumphs of the Unions; nor to re-assure our faith in the ability of the unions to cope with every emergency—economic, political or social. The trade union, the most bitterly attacked and denounced institution in the world's history, has successfully withstood the open assaults of capitalists and politicians, while calmly repelling the secret machinations of conspirators within the very cordon of the camp of labor. Suffice it then to say that the workers have realized that the men who are employed in any particular branch of industry understand the nature of it and are better qualified to adjust any difficulties which may arise with their employers than men who are unacquainted with the conditions of that business; that reckless and so-called "sympathetic" strikes are disastrous in the extreme, and generally result in the workmen going back to work upon the employers' terms; and finally the workers are convinced that open organization is the best form of organization, and that the time has now arrived to openly, calmly and fearlessly assert the claims of labor.

With these views the St. Louis Convention of the American Federation of Labor resolved upon a general agitation for the establishment of the Eight-hour workday upon May 1st, 1890, and it now becomes the mission of the Boston Convention to transform, if in the wisdom of the delegates there assembled it may be deemed advisable, the agitation, which has now become world-wide, into an organized movement for its realization.

The basis of representation in the Convention is as follows:

From National or International Unions, for less than four thousand members, one delegate; four thousand or more, two delegates; eight thousand or more, three delegates; sixteen thousand or more, four delegates; thirty-two thousand or more, five delegates, and so on; and from each Local or District Trade organization or federated body, not connected with, or having a National or International head, affiliated with this Federation, one delegate.

And now we would appeal to each and every unionist to whom this call may be specially addressed, or into whose hands it may arrive, to see to it that the full number of delegates to

which his union may be entitled be elected at the earliest possible date; that the delegate or delegates so chosen be provided with the necessary credentials to the forthcoming Convention, and that the name and addresses of the delegates be forwarded to this office, as above, without unnecessary delay, in order that full provision may be provided for their comfort and accommodation.

Yours fraternally.

SAMUEL GOMPERS,

President, American Federation of Labor.
P. J. MCGUIRE, Secretary.

In the foregoing it will be seen that organization while essential, does not answer the demand, when a great battle is to be fought in the interest of Labor then FEDERATION is required, and only federation will accomplish the work. Federation is the workingman's shibboleth. *Labor omnia vincit*, labor conquers everything, is well enough. It does conquer all opposition to progress. Can it conquer those who have determined in the past and up to the present that justice shall be withheld from labor? It can, if it federates. If not, its fate can be written now, as truthfully as at a subsequent date.

PROMOTION FROM THE RANKS.

Mr. Charles Francis Adams, President of the Union Pacific, was recently interviewed at Omaha, and among other things is reported as saying:

"In going over the system," said Charles Francis Adams, president of the Union Pacific railway, this morning, "as I have been doing for these four weeks, the most gratifying feature is the aspect that I have seen of permanency in the present working organization. It is far greater than anything that has existed before, since I have been president of the company, and it leads me to feel a confident hope that the disorganization in the Union Pacific service, which has necessarily existed from causes beyond my control, due to frequent changes by resignation, death, etc., is a thing of the past. I can see reason to feel confident now of the permanency of the organization.

"An organization that will be permanent has at last taken shape. Of course every organization of a railroad undergoes changes. Even that of the Pennsylvania railroad has been changed entirely within my recollection. Nevertheless, I hope and feel that a working local organization of the Union Pacific has at last taken shape, which I hope and believe may practically continue for the next twenty years.

"There has been, hitherto," continued Mr. Adams, "for reasons which I have regretted, but could not help, a large infusion of a new element from outside into our service. I believe that it is over, and, in the future, I see no reason why the Union Pacific should not show the effect of organization and system by having promotions made from within its own ranks. It will be very strange if with a force of 20,000 employees we cannot find men in our ranks to fill all vacancies. Any new blood which is brought in should be at the bottom, and any vacancies above should be filled from below."

"Is your policy what might be called one of civil service?"

"It is not civil service," replied the president. "No seniority or any other thing but merit, and merit alone, will determine the promotion. We believe we can find all the men we want without going outside, and that constitutes a permanent service, which I believe we have got at last.

A RULE UNJUST TO EMPLOYEES.

We have received a personal record blank used on the Northern Pacific Railroad, which an applicant is required to sign before employment can be secured. Omitting questions from 1 to 12, both inclusive, we come to question 13, as follows:

Have you read, and do you understand, the following extract from the Book of Rules of the Northern Pacific Railroad Company?

The rule is No. 25, and is made prominent by a caption of caution. We give it as printed:

CAUTION AS TO PERSONAL SAFETY.

25. Great care must be exercised by all persons when coupling cars. Inasmuch as the coupling apparatus of Cars or Engines cannot be uniform in style, size or strength, and is liable to be broken, and as from various causes it is dangerous to expose between the same, the hands, arms, or persons of those engaged in coupling, all employees are enjoined before coupling Cars or Engines to examine so as to know the kind and condition of the drawhead, drawbars, links and coupling apparatus, and are prohibited from placing in the Train any car with a defective coupling, until they have first reported its defective condition to the Yard Master or Conductor. Sufficient time is allowed and may be taken by employees in all cases to make the examination required. Coupling by hand is strictly prohibited. Use for guiding the link, a stick or pin. Each person having to make couplings is required to provide a proper implement for the purpose, as above specified. (All persons entering into or remaining in the service of the Company, are warned that the business is hazardous, and that in accepting or retaining employment they must assume the ordinary risks attending it.) (Each employee is expected and required to look after and be responsible for his own safety) as well as to exercise the utmost caution to avoid injury to his fellows, especially in the switching of cars and in all movements of trains. Stepping upon the front and rear of approaching engines, jumping on or off Trains or Engines moving at a high rate of speed, getting between cars in motion to uncouple them, and all similar imprudences are dangerous and in violation of duty, and are strictly prohibited. Employees are warned that if they commit them it will be at their own peril and risk. Employees of every rank and grade are required to care for themselves, before using them, that the machinery or tools which they are expected to use, are in proper condition for the service required, and if not, to put them in proper condition, or see that they are so put before using them. All will be held responsible accordingly.

We reproduce the foregoing that the reader may see with what consummate adroitness the rule is drawn. On its face, the company intimates profound solicitude for the safety of the employé. He is exhorted to be prudent; he is warned of dangers; he is told, before coupling cars, "to examine so as to know," etc. The assumption is that for such duties he has ample time, when, in ten thousand instances, he has no time at all for such examinations. The yard is full of cars, a train is to be made up in a few minutes, all is bustle and hurry. Still, the employé, the man who must do the coupling, is required to know the condition of drawheads, drawbars, links and coupling apparatus, and if he does not know, what

in thousands of instances he cannot know, he becomes liable, without redress, for any and all damage to himself, and that there shall be no mistake, the rule declares that the "employees in accepting or retaining employment they must assume the ordinary risks attending it." The company takes no share whatever in risks. It assumes to have performed its entire duty when it points out the dangers, and asks the employé if he comprehends them? But, to place the matter beyond controversy, the company, in the rule, says, "*Each employé is expected and required to look after and be responsible for his own safety.*" In this matter, the company takes no risk. It lays down a rule, which while burdening the employé with dangers and responsibilities, completely absolves itself from blame and responsibility. As we have remarked, the "rule" displays the skill of the legal juggler, and the purpose of it is easily detected by those who have the time to analyze it, which is, in case an employé is maimed or killed, and damages are demanded, the company comes into court, presents the "rule" and claims, under its provisions, that the unfortunate employé took all the risks; said that he understood them, and voluntarily signed away all his rights for redress.

Now, we assume that in nine cases out of ten, the employé does not understand either the purpose or the scope of the "rule," and that in his eagerness to obtain employment, born of necessity, he signs the contract.

The question arises, can a man, under such circumstances, sign away his rights, or the rights of his wife and children? Again, can the corporation or employer make a contract, and have the courts pronounce it valid, which absolves it from any share whatever in the dangers incident to its business and throws the entire responsibility upon employees?

Our recollection is that the drift of decisions are against such an assumption on the part of the employers. If, on the contrary, the laws recognize such rules as the one we herewith print, then the demand is that such vicious laws should be speedily repealed.

Moreover, the employees on the Northern Pacific need not wait the slow processes of courts and legislatures to relieve themselves of responsibilities such as the rule of the road unjustly imposes. They can request of the company such modifications of the rule as justice demands, and, as we believe, public opinion would unequivocally indorse.

In all such matters the *Magazine* takes the ground that such rules as we have commented upon are radically unjust; that they are totally destitute of every element of fair play, and ought not to exist. The difficulty is that they embarrass the employé in his

efforts to obtain redress, complicate his case, end when maimed and poor his chances to cope with a corporation in the courts are about the same as those of a humming-bird to withstand a blizzard. The right thing to do is for employes, before signing such contracts, to have them modified to an extent that justice can be had without legal quibbles, red tape and circumlocution.

We feel assured, from the fact that the management of the Northern Pacific is distinguished for liberality towards its employes, that when the attention of its officials is called to the rule we have commented upon, such modifications will be made as will insure harmony and that efficient service which has been prominently characteristic of the road.

THE B. OF L. E.

We have on our table the *Rocky Mountain News*, of Thursday, Oct. 17, giving a highly readable account of the opening exercises of the 26th Annual Convention of the B. of L. E., at Denver, on Wednesday, October 16th.

More than 400 delegates were in attendance, and the meeting at the Opera House was in all regards most flattering. The immense building was fairly packed. The decorations were superb.

The meeting was called to order by the Chairman, Mr. John Rice. After music by the band and a prayer, Mayor Wolf, of Denver, welcomed the delegates to the city.

Following the welcoming speech of the Mayor, Patrick Fennell—"Shandy Maguire"—the poet laureate of the Order, and of the men of the rail, was introduced and received with that generous applause due to genius.

Then came addresses by Hon. Loren W. Reynolds, H. B. Chamberlain, General Manager, and C. F. Meek. Following these addresses, Judge Falker presented Grand Chief Arthur with a splendid gavel, in highly complimentary terms, which, though a surprise to Mr. Arthur, was most gracefully received. This ceremony over, Grand Chief Arthur proceeded to deliver his annual address, upon the conclusion of which Rev. Myron W. Reed was introduced, and then with a brief address by Mr. J. McNarama, the exercises closed.

It was a grand affair, and began the proceedings of the convention under delightful auspices.

We have on our table the report of the 22d Annual Convention of the American Railway Master Mechanics' Association, held at Niagara Falls, June, 1889. There were 133 members present, and the proceedings were of great interest, the discussions taking a wide range.

JOHN LIVINGSTON.

Among the many evidences that come to us, that the *Magazine* is in demand, we print the following letter:

THE RAILWAY SHAREHOLDERS' ASSOCIATION.

OFFICE OF THE PRESIDENT,)
CAMPVILLE, NEW YORK, October 8, 1889. }

DEAR SIR:—Having been given the July issue of your Journal, I find therein so much of interest that you would confer a favor by sending to me the subsequent issues as under to Nov. 10 and after such date to New York City.

Yours very respectfully,

JOHN LIVINGSTON.

CAMPVILLE, TIOGA COUNTY, N. Y.

In the July issue, we paid our respects to Austin Corbin, and are still in that line of business in which we shall continue until the verdict of all honorable men is in consonance with our estimate of him, and we are not surprised that Mr. John Livingston found in the July issue "so much of interest" that he wants "subsequent issues." We are not boastful, but deem it prudent to say that "subsequent issues," will meet moderate demands on the part of our army of subscribers, in which we are glad to number Mr. John Livingston, President of "The Railway Shareholders' Association."

E. T. JEFFERY, late General Manager of the Illinois Central Railroad in surrendering his position, addressed the following circular letter to the officers and men of the road:

After laboring thirty three years for this Company in various capacities, I now retire from its service, and in doing so desire to express to the officers and employes my gratification at their loyalty and devotion to the interests of the corporation we have served, and my appreciation of the support and friendship accorded me in all departments, and by all employes. Your confidence in me as a man and an officer will always be cherished in my memory.

E. T. JEFFERY, General Manager.

CHICAGO, September 2, 1889.

Mr. Jeffery, during his connection with the Illinois Central, won the distinction of being a just man—than which there are none more honorable. In his retirement he has the warm wishes of thousands for a long life and a golden sunset.

THE *National Magazine* is the name of a new literary venture of Chicago, which begins with the October number. It is published under the auspices of the new "National University," which opens October 1st, of which it is the organ. The first number will contain articles on literary, educational and scientific subjects, and a prospectus of the University, which is said to be modeled after the London University and has extensive non resident courses, teaching many subjects by mail. Published at 182 Clark street.

FEDERATION.

The *Labor Leader*, of Boston, publishes a communication over the signature of N. E. M., in which the writer discusses a plan for the federation of all classes of working men. He says:

The whole idea is based on the supposition that the labor-masses of this country can be taught to organize, so that every trade, craft and calling can be brought under the influence of the strong and gifted minds that are working for the benefit of the workingmen. It is, of course, considered that there are men and women in this labor movement who are studying the labor problem with the single aim of benefitting the labor people, and that they exercise a beneficent influence on them, otherwise any scheme for their advancement will prove utopian and unproductive of permanent good. I have no figures before me to state what proportion of the laboring people of America are organized in one way or another; but I presume a large majority of them are; but although organized, they are very far from being one great, solid brotherhood. Every trade, craft and occupation may belong to some organization, but they fall short of being as effective as they would be if they were concerted into one great brotherhood in which the welfare of the weaker members would be looked after as carefully as the most powerful ones. One of the inevitable results of such a union of interests would be that the weak ones would feel strong, and the strong ones would feel stronger, and proud of their added strength; and the whole would be an irresistible combination that would change the labor movement from being a cluster of small "tugs of war" between the different organizations, to a gigantic tug between them and the monopolists, when with a "long pull and a strong pull, and a pull all together," they could hurl the said monopolists into disorganized and disgruntled heaps, from which they could not extricate themselves before the labor combination would be too strong to be assailed with impunity.

In order that this idea may become a tangible fact, it is necessary to make a beginning. The first thing to be done is to get all the labor organizations to consent to a consideration of the subject. The next step is for each body of organized workmen to appoint delegates, in proportion to their strength; meet in some central city, discuss and decide on a plan of action. When a plan of action is decided on, that is, when the terms of the union are agreed to, then follow the routine business of a well ordered convention, such as constitution, by-laws and a host of other things that would necessarily have to be considered.

The plan of confederation should be somewhat after the manner adopted by the founders of this Republic, when they contemplated the confederation of the colonies into one grand union. That is, each trade or occupation must be looked upon as they looked on each colony. Each colony was sovereign in its rights as such. So it must be with each trade. Each colony considered the pro and con the why and wherefore, of the proposition, and had a perfect right to accept, reject or propose conditions. So let it be with the trades or occupations. Let each trade, craft or calling be considered first by itself and then in conjunction with all the assembled trades. What might suit the Colony of Massachusetts, might not suit the Colony of South Carolina; and what might suit the shoemakers of Massachusetts might not suit the shoemakers of South Carolina, and so on through all the trades.

The foregoing indicates the drift of opinion. Workingmen are reading the signs of the times as accurately as Daniel read the writing of the skeleton hand on the wall. Time will be required, and therefore patience;

but the educational forces are abroad; the schoolmaster is everywhere. Federation is the hope of the wage-workers of the country. The Labor papers of the country without an exception advocate federation. The logic is irresistible. To find the way to federate is the question. It will be found. The outlook is cheering, and our faith in the masses strengthens as the days go by.

TWENTY YEARS WITH THE INDICATOR.

We acknowledge the receipt of a well bound volume of 284 pages bearing the title of "Twenty years with the Indicator," by Thomas Play, Jr., Consulting and Constructing and Civil and Mechanical Engineer, etc., P. O. Box 2,728, Boston, Mass. The book contains many illustrations and rules as to the best way to run any steam engine to get the most economical results; how to adjust valves and valve motion correctly, with full directions for working out horse-power and the amount of steam or water per horse-power as also the economy of fuel. The book also contains the author's original and correct application of the theoretical curve, to show exactly when the steam valve curves, and whether valves leak or not, with extended directions for attaching the Indicator, what motions to use and those not to use. The book, is dedicated "to working engineers—marine, locomotive and stationary," and is so arranged as to enable those desiring information, to refer to special subjects discussed, readily. We regard the book as a highly valuable contribution to knowledge relating to the management of the steam engine, and which should be in the library of every engineer, and of every firm ambitious of mastering the machines.

J. M. KELLY.

The *Magazine* takes special pride in making mention of J. M. Kelly, Esq., Editor of the *Commoner and Glass Worker*, of Pittsburgh. A young man of splendid abilities, he is making his paper a power in the advocacy of principles dear to the hearts of intelligent workingmen. He is a "Union" man, and deeply interested in the cause of organized labor, and his paper bears evidence of large comprehension of problems to be solved and of the educational work to be done, to give workingmen their rightful position and prominence in the affairs of the nation. Most heartily do we congratulate Mr. Kelly upon the success he is achieving, and wish his enterprise still greater victories.

CHRISTIAN England, has over \$1,000,000 invested in the manufacture of idols. When mercenary greed gets possession of individuals or nations, christianity has to stand aside.

PROGRESS OF INVENTIONS SINCE 1845.

In the year 1845 the present owners of the *Scientific American* newspaper commenced its publication, and soon after established a bureau for the procuring of patents for inventions at home and in foreign countries. During the year 1845 there were only 502 patents issued from the U. S. Patent Office, and the total issue from the establishment of the Patent Office, up to the end of that year, numbered only 4,347.

Up to the first of July this year there have been granted 406,413. Showing that since the commencement of the publication of the *Scientific American* there have been issued from the U. S. Patent Office 402,106 patents, and about one-third more applications have been made than have been granted, showing the ingenuity of our people to be phenomenal, and much greater than even the enormous number of patents issued indicates. Probably a good many of our readers have had business transacted through the offices of the *Scientific American*, in New York or Washington, and are familiar with Munn & Co.'s mode of doing business, but those who have not will be interested in knowing something about this, the oldest patent soliciting firm in this country, probably in the world.

Persons visiting the offices of the *Scientific American*, 361 Broadway, N. Y., for the first time, will be surprised, on entering the main office, to find such an extensive and elegantly equipped establishment, with its walnut counters, desks, and chairs to correspond, and its enormous safes, and such a large number of draughtsmen, specification writers, and clerks, all busy as bees, reminding one of a large banking or insurance office, with its hundred employees.

In conversation with one of the firm, who had commenced the business of soliciting patents in connection with the publication of the *Scientific American*, more than forty years ago, I learned that this firm had made applications for patents for upward of one hundred thousand inventors in the United States, and several thousands in different foreign countries, and had filed as many cases in the patent office in a single month as there were patents issued during the entire first year of their business career. This gentleman has seen the patent office grow from a sapling to a sturdy oak, and he modestly hinted that many thought the *Scientific American*, with its large circulation, had performed no mean share in stimulating inventions and advancing the interests of the patent office. But it is not alone the patent soliciting that occupies the attention of the one hundred persons employed by Munn & Co., but a large number are engaged on the four publications issued weekly and monthly from their office, 361 Broadway, N. Y., viz.: The *Scientific American*, the *Sci-*

tific American Supplement, the Export Edition of the *Scientific American*, and the Architects' and Builders' Edition of the *Scientific American*. The first two publications are issued every week, and the latter two the first of every month.

WILL FEDERATE.

We are in receipt of an official communication from Daniel J. Carr, Esq., Grand Secretary and Treasurer of the B. of R. C., under date of October 7th, making the following announcement: At the first annual convention of the Brotherhood of Railway Conductors, held in Los Angeles, California, September 16th, 1889, it was the unanimous vote of this Brotherhood that the Brotherhood of Railway Conductors unite with the other organizations, viz., B. of L. F., B. of R. B. and S. M. A. A., in federation."

Steps have already been taken to consummate the business, and very soon we hope to see the B. of R. C. in line under the federated banner. This movement is in line with the predictions of the *Magazine*, and we hail it with undisguised satisfaction.

* *

We are under many obligations to Mr. C. Straw, of Watertown, Wis., for valuable suggestions and extracts from papers bearing upon labor topics, which from time to time, in our editorial work, are great helps. Mr. Straw takes special interest in all economic questions, and knows a good thing when he sees it. His contributions to our miscellaneous reading are appreciated, and we are always pleased to receive them.

* *

SO FAR as the crops of the country are concerned, the outlook for profitable railroading is regarded cheerful. Big crops of wheat, rye, oats, barley and hay are assured. Corn is making up for lost time and the cotton estimate is 9,000,000 bales. Such facts mean business.

* *

It is stated that census returns for 1890, will show fabulous advancement of material prosperity in the United States. If so, labor has done it all, or at least made such advancement possible. Will the reports show fabulous advancement in the condition of laborers? We shall see.

* *

THE United States is exporting breadstuffs at the rate of \$117,000,000 annually, and beef, hog and dairy products, at the rate of \$100,000,000 a year, and yet American workmen, in thousands of instances, can't get enough to eat.

NOVEMBER, 1889.

PHILADELPHIA, PA., Sept. 20, 1889.

To the Editor of the *Firemen's Magazine*:

The many able arguments which have appeared in the columns of the *Magazine* from correspondents in different sections of the country, both for and against the proposed new name for the Brotherhood, shows that the subject is attracting widespread attention, and I trust when the time comes for its final settlement, it will be decided in such a manner whereby the entire Order will be benefitted. But, Mr. Editor, I think those who take part in the controversy now going on should be careful in the articles they write to use language that none of our Brothers can take exception to. In my opinion this has not so far been strictly adhered to, for in some of your late issues I notice several articles from some of your correspondents wherein they seem to think that this proposed change has been and is still being advocated by Engineers alone, for their especial benefit, and one, in language more forcible than polite, informs them that if they do not like the present name they can leave the Order. This kind of language I think rather uncalled for, and expresses a sentiment I am loth to believe exists to any great extent in the Brotherhood. Very many of the Engineers have been in the Order since its infancy, and have ever been and are to day its steadfast friends, and I am sure would never urge the adoption of any policy whereby they would alone be benefitted. For you, my Brother correspondents with whose writings I now differ, I have not the slightest feeling of ill-will, I only regret that you should have seen proper in the articles you have written to use language that in my judgment can only in the near future be productive of evil if persisted in. For myself, personally, I am heartily in favor of the change, because I think it would prove advantageous to the Order in many ways. Time works many and great changes, and those who joined the Order in its early days and at its birth have long since passed to the other side of the cab, but although their services have been rewarded by promotion, they still have an abiding faith in the Brotherhood and zealously espouse its cause at all times. Again, under existing laws, Engineers are invited to join the Order, and I think should be recognized in the name. There are other reasons why I think a spirit of fairness and justice would advocate a change of name, but I will state those reasons in another article at a later date.

I rejoice that federation has at last become an assured fact, and that three great and powerful organizations are enrolled beneath its banner, and I trust the day is not far distant when those

who are still keeping aloof from the movement will recognize the important fact that in a thorough and complete organization rests the only hope in the future for success to the laboring classes of our country. I congratulate you, Mr. Editor, on the able and fearless manner in which you, in the columns of the *Magazine*, so nobly defend the great principles of right and justice and so boldly expose the conduct of those who would if they were able stamp out of existence the last vestige of our Brotherhood.

I have heard that some of our "Q" brothers in their search for employment have not received that kind and generous treatment from all that their honorable and manly fight in defence of the principles of our Constitution fully entitle them to. This is not right. They deserve and should receive kind words, generous treatment, and all other assistance in our power to give.

The Mechanical portion of your *Magazine* I consider very interesting. I would, if possible, advocate its enlargement, so that by a larger and more complete discussion of the locomotive and its mechanism our young Brother Firemen may more readily fit themselves for the responsibilities that await them in the future.

To the members of the B. of L. E., I would say, that I trust that in your next convention, now near at hand, you will, in a spirit of true manhood and animated by a sincere desire to do right, repeal those unkind and unjust clauses in your constitution which refer to the B. of L. F. This Order has repeatedly shown by all the means in its power that it desires to be on the most friendly terms with your organization, but your policy, I regret to say, has been of an entirely different nature, and one which I candidly believe is, if persisted in, fraught with danger, not only to your own but to other labor organizations.

To the members of the B. of L. F., in conclusion, I would say, let us all remember that we are members of a great, good and powerful Order. Let us live strictly in accordance with the requirements of our Constitution. Let us practice its precepts and its teachings and be Brothers to each other in the truest sense of the word, not only in the Lodge-room but in the daily walks of life, and may "He who doeth all things for the best," guide, bless and protect you one and all.

Enterprise.

TRENTON, MO., Sept. 6, 1889.

Editor *Firemen's Magazine*:

I take pleasure in announcing to the readers of the *Magazine* the marriage of Bro. C. W. Gallup, of No. 33, to Miss Ida M. McGuire, of Trenton, Mo. The happy event occurred in this city, Wednesday, September 4th. The groom has been in the employ of the C., R. I. & R. Railroad for the past five years, and is well worthy of the lady he has chosen. The members of Success Lodge, No. 33, tendered their hearty congratulations, and may God speed them on their journey through life.

L. E. W.

For the Magazine.

MY FATHER.

I remember my father was young and strong,
When I was a little boy;
His hands were steady, his eyes were bright;
He was ever ready, by day or night,
To work for his children, that he might
Provide for their comfort. It was his delight
Through all the cold winters, so dreary and long,
To labor and toil for their joy.

His pathway was such that he could not glean
A garner of silver and gold;
His heart was willing, his purpose pure;
And every dollar he gave to procure
Some comfort for home, to make it secure;
No task was too hard for him to endure
It patiently, willingly, that he might screen
His loved ones from hunger and cold.

But struggling and toiling from year to year
Have left their marks at last:
When I see the prints of his cane in the snow,
And notice his footsteps a shorter they grow;
The hand once so steady is trembling and slow,
The eyes once so bright are losing their glow,
And having a father to cherish, I fear,
Must soon be a joy of the past.

May God permit me, in a measure, to pay
A part of the great debt I owe
To him who has done all he could do for me,
In every possible way he could see,
Before he is taken forever to be
De livered from sorrow from labor set free.
For this I will ever endeavor and pray,
Till his struggles are ended below.

George W. Hall.

STANBERRY, Mo., September 28, 1889.

LYNDONVILLE, VT., September 28, 1889.

Editor Firemen's Magazine:

Green Mountain Lodge, No. 301, is in a prosperous condition, financially and socially; the members live in fraternal fellowship, and are earnest and hard-working men.

Bro. Frank Thompson makes an excellent Master, and is ably assisted by Bro. Norris.

Since the organization of the Lodge, there has been an earnest desire to have a visit from our Grand Master, which was realized on the 25th of September, when Bro. F. P. Sargent arrived and was greeted at the depot by about thirty of the members, after which he was invited to tea by Bro. Thompson. Tea over a reception was given Bro. Sargent by engineers and firemen at Engineer's Hall, at which our Grand Master discussed federation in a way that was both interesting and instructive, and served to convince all who heard him that it was right.

At 8 o'clock P. M. a secret meeting of the Order was held in Odd Fellows' Hall, when Bro. Sargent discussed the principles of the Order and its financial standing. He also gave us a brief history of the Order from the time of its organization to the present, impressing upon our minds the importance of laboring for its interests, and emphasized the obligations resting upon the membership to regularly attend the meetings of the Lodge and promptly respond to every duty imposed by constitution and by-laws.

The meetings were in all regards pleasant and profitable and the good accomplished will, I think, more than compensate Bro. Sargent for

the time and trouble required to make us the visit.

We found Bro. Sargent, a genial good natured "Yankee" and the right man in the right place and we wish we had a thousand more such men in our brotherhood.

It was not a little amusing to see Bro. Sargent rub up against Bro. Weeks politically, but we can't allow any one to harrow up the feelings of Bro. Weeks, without protesting against such cruelty.

At 12 o'clock—midnight—we all adjourned to the Union Hotel, where a superb supper was served, fit for a prince, for which all honor is due Bro. Chase. Supper over we bid adieu to our Grand Master, wishing him a prosperous journey.

I must not omit a good joke played upon Bro. Sargent by the boys. A large pumpkin, displayed in a show window caught the Grand Master's eye, bearing the inscription, "Ten cents a guess on the number of seeds contained," the successful guesser to have a clock with machinery so arranged, that at certain hours, a little bird would make its appearance, and carol a few notes for the delectation of the owner. Bro. Sargent guessed 125 seeds, and with the nonchalance of a millionaire tossed ten cents on the counter, and while absorbed in solving the problem of pumpkin seeds, Bro. T. appropriated the dime, and purchasing two cigars he and I indulged in a smoke while Bro. Sargent sang melodiously

"A charge to keep I have."

I do not like to give him away and merely note the incident, that the boys may sympathize with him, when from his dreams of success, he awakens to the fact that the little bird in the clock will never beguile his leisure hours with its melodies.

Yours truly,

Shay Gear.

DUNSMUIR, CAL., Sept. 7, 1889.

Editor Firemen's Magazine:

On the evening of August 20th the members of Mt. Shashta Lodge, No. 312, entertained their friends in the I. O. O. F. hall with music and dancing. At 8:30 a good programme was commenced, which lasted till 11:30 when all were provided with every delicacy an epicure could wish. Following the rich repast the guests enjoyed themselves till early morning hour in dancing. During the evening the Lodge was presented with a handsome altar scarf by Mrs. Cook. After the affair was over, it was conceded by all that it was the most enjoyable entertainment ever given in Dunsmuir.

Before closing, I wish to say a few words for No. 312. We are progressing finely, and gaining every foot of ground there is to spare. We have a zealous set of officers, and expect to make such a change in this portion of the country that Bro. Hannahan will not know it the next time he comes.

Fraternally yours,

H. L. Walther.

GOODLAND, KAN., October 9, 1889.

Editor Firemen's Magazine:

Here I am again to discuss the proposal in regard to changing the name of our Order. I would like to ask how it will benefit us individually? Now suppose you or I was thrown out of employment and started out to seek it elsewhere, under the present laws we are entitled to a card of recommendation, and the card will read, "Brother ——— has been employed on such a road as fireman or engineer," which ever the case may be. Of course you see a fireman and he introduces you to the Master Mechanic, and you present your card of recommendation. Your card shows that you are an engineer, but you are a member of the B. of L. F. Now, I will ask, will that make any difference with the Master Mechanic whether you belong to the Brotherhood of Locomotive Firemen or Brotherhood of Locomotive Engineers, or any other name you may suggest? It don't make any difference what name you select, the Order will be a *Firemen's Order*, because the firemen are vastly in the majority. And again, it will make no difference what name we have, the engineer's ranks will fill up just the same as heretofore from our Order, because, as I said before, it is a *Firemen's Order*, and you can make *nothing else out of it*. If we can make any change for the better in our insurance when we change the name, why can't we under the present name? And how I tell you I am going to fight the change as hard as I can unless the benefits to be derived by the change of name is shown me in a different light than that which I now see it in.

Now turn from this question and take up some other. Here is a very good subject which appeared in the August number of the *Magazine*, page 683. "Is it Possible?" is the heading of the article. In the article it said one half of the firemen do not know how the other half fire. This is very true, and I will give you a mild description of our work here. From Goodland to Colorado Springs it is 185 miles (that is over Div. west), and it takes from fifteen to twenty-one tons of coal going west on freight, and about seven or eight tons coming east. We have Mogul engines, 19x24, made by the Brooks Locomotive Works.

I will close and leave room for more interesting letters from the other Brothers, but I hope the Order will carry the name she now carries for some time to come.

I am fraternally yours,

S. W.

[It is the privilege of every member of the Brotherhood of Locomotive Firemen to entertain such views as suits him upon all questions relating to the welfare of the Order, but it occasionally happens that men's likes and dislikes are after the style of the old woman who didn't like Dr. Fell. She is reported as saying:

"I do not like thee, Dr. Fell,
The reason why I cannot tell,

But th's I know, and that right well,
I do not like thee, Dr. Fell."

The writer of the foregoing letter appears to be in the predicament of the aforesaid old woman. Reduced to doggerel it may be summed up as follows:

"I do not like any change of name,
The reason why, 'twould be the same,
It may seem a little queer,
But a fireman is an engineer,
And an engineer's a fireman. See?
How fiddle, fiddle, twiddle dee
Makes things the same,
Without regard to change of name?"

Seriously, our correspondent, if he can be said to advocate anything, favors making the Firemen's Brotherhood a "breeding pen" for the B. of L. E. He virtually admits that in the past it has occupied that degrading relation, and expresses the belief that the Brotherhood cannot rise above such a menial level. "The Firemen's Order" includes hosiery and engineers. It is therefore something more than a "Firemen's Order." It has retained in its ranks thousands of engineers, promoted from firemen. They are no longer firemen, they are engineers. To have a name that fully expresses facts and conditions is to respond to circumstances which the "Firemen's Order" has itself created, and which it ought to recognize. Some of our brethren talk of the "glory" of the Order. What is its "glory?" Is it not that it takes in unskilled men—firemen—educates them, transforms them into skilled men, makes engineers of them? Ought it not to be the "glory" of the Order to retain such men in its ranks? to recognize their advanced position? If a change of name will accomplish this, is it not wisdom to respond to the demand? And will it not be the *shame* of the Order if it fails to comprehend the logic of facts, circumstances and conditions, and blindly adheres to the old name?

Are we to be told that the "glory" of our Order is that it breeds recruits for the B. of L. E.? That it has no other conception of "glory," of ambition, of high resolves and splendid attainments? If this is to be the programme of the future, if the Firemen's Order is to march forever in the same old rut; if it is irrevocably wedded to groveling ideas and methods; if it has no higher aim and ambition than to work that others may reap, the time has come to make the matter known. There have been enemies of the Order who have striven to overwhelm it in disaster, and have failed, and now if its degradation is to be written by its own hand then indeed its humiliation is achieved, and henceforth it must crawl.

If men will oppose the change of name, by all things decent let us have reasons instead of *rot* to answer.—ED. MAGAZINE.

F. P. SARGENT.

LINES BY THE LAZY MINSTREL.

At last we have received a call,
That greatly rejoiced us, one and all,
From our Grand Master
Sargent.

But t'was a rather strange affair,
That no one was found to meet him there;
Neglected Brother
Sargent.

I tell you in rythmatic line
T'was no one's fault, at least not mine,
That we missed Brother
Sargent.

But how it happened, you'll scarcely guess
It was the telegram—no less
Sent on by Brother
Sargent

That didn't come to our worthy Jim
Murphy, our Master, to seek him,
Was hunting Mr.
Sargent.

After great trials and tribulations,
Finding men to fill our stations,
Who knew not F. P.
Sargent,

A dozen of us, or so, had waited,
With eyes agaze and hearts elated,
To meet our Brother
Sargent.

But when the express he was not in,
Came rushing in, with roar and din,
We said, "Where's Brother
Sargent?"

Then round the city quickly flew
Our Master and our scribe so true,
To find our Brother
Sargent.

The Albion at last they touched,
'T was "take that cab," and then they rushed
Out wildly after
Sargent.

They caught him, feeling great relief,
And brought him to the lodge, in brief
To tell his story.
Sargent.

The B. L. F. has no where shown
More good common sense, I'll own,
Than neglecting
Sargent.

Encouragement and good advice,
To Brothers, sitting still as mice,
All this gave Brother
Sargent.

Each question asked, or large or small,
He'd answer, suited to them all.
Our gifted Brother
Sargent.

And when the evening grew too late
For hungry souls to longer wait,
We escorted Brother
Sargent

Down to the city, where we fed,
Enjoyed ourselves, and sadly said:
"God speed" to Brother
Sargent.

Now one word more, *He is the man*
In the right place, *no better can*
Supplant our F. P.
Sargent.

St. Lawrence Lodge, No. 15.

W. F. S.

MR. EDITOR:—Having used the expression, "Which way am your musket a pintin' to-day?" to illustrate a point, I was corrected, and sent the following "Campaign Song" with note of explanation: "Enclosed you will find a copy of a campaign song, the first part of which I thought might be the negro melody for which you enquire."

Judging from the first verse that this song with its refrain is some old-time negro camp-meeting melody, and that what follows is an adaptation of it to political purposes, I ask you to publish, trusting that some one will send you the original, if there be one. A gentleman at one time gave me the name of Capt. Nelson Page, of Richmond, Va., author of "Massa Chan," as a likely person to give the original and the name of its author. *Eccentric.*

"WHICH WAY IS YOUR MUSKET A PINTIN'
TO-DAY?"

In a little lox church in the State of Virginia
Some negroes had gathered to worship the Lord;
And after the service they had a class-meeting,
That each for the Master might utter a word,
Their leader exhorted, and spoke of the warfare
Which christians should wage against error
alway;

And finished by asking the following question:
"Which way is your musket a pintin' to-day?"

One after another they gave their experience;
Some brothers were happy, some lukewarm or
cold,

One saw his way clear to the portals of glory
Another had strayed, like the lamb from the
fold.

At last Brother Barkis—a renegade member,
And Satan's companion for many a day—
Arose, cleared his throat, though visibly nervous,
He folded his arms and proceeded to say:

"Dear brudders and sisters, I once was a Christian,
I once was as happy as anyone here;
I fit for de church like a battle-scarred soldier
And stood by her banners when traitors were
near."

"Hold on, dar," the leader excitedly shouted:
"Please answer the question I axed you, I say;
I've given you credit for all you fit den, sir;—
"Which way is your musket a pintin' to-day?"

The Democrats talk of the glory of Hancock,
And boast of the record of English, as well,
Then give them due honor, for Judas was loyal,
Till money was offered; he took it, and fell—
I would liken their boast to the boast of old
Barkis

And then with the class-leader, honestly say:
"Hold on, dar, my brudder; dat isn't de question;
Which way is their muskets a pintin' to-day?"

Shall men who are training with Brigadier Gen-
erals,

Who fought to destroy our National flag,
Rise from their seats in the Forty-sixth Congress,
To eulogize traitors like Davis or Bragg?

Shall men, who bow down in Confederate caucus,
And worship the masters they humbly obey?
Shall they rule the Nation by Washington
founded?

Which way is their muskets a pintin' to-day?

The question, my friends, is of vital importance;
The Nation is waiting in anxious suspense,
Each voter can wield a political musket—

Then wield it, I ask, in your country's defence;
The issue before us is clear and unclouded—
Shall the Nation be ruled by the Blue or the
Gray?

I candidly ask, fellow soldier and voter:

"Which way is your musket a pintin' to-day?"

COLLINWOOD, OHIO, October 13, 1889.

MR. EDITOR:—I have taken up the *cudgel* to find fault with your management of our official organ, the *Locomotive Firemen's Magazine*.

To commence with, we get little or no information in regard to firing or cleaning.

I see Wm. Lockwood has devoted five columns to "Wave Power lines." What good will that do me in firing? It won't put the coal into the fire box nor tell me where it should go to get the most good out of it.

I see "J. R." wishes the *Magazine* to print for our information drawings of different parts of the locomotive. It would be of more use to us than such letters as we are getting from "W. L." and others on "wave power lines" and "hammer blow," and the expense could not be much greater than "setting up" so much "matter."

I see in Mr. Heroy's letter much that meets the views of firemen of this part of the country.

I do not think as you are Editor of the *Magazine*, that you should air your views so much in criticizing letters from the brothers, and you would see more objections towards a change of name if the brothers were not so afraid of your pen. If you would look at it in the straight light you would see that the discussion on a change of name was started from *spite* towards the *Engineer's Brotherhood*.

The B. of L. F. was organized for a breeding pen for engineers and it is right and proper that they should take the promoted men OFF OUR HANDS as soon as they are of an age to go.

We assuredly cannot adjust grievances for engineers.

If you keep on hitting the *engineers* as you do in every issue of our *Organ*, we shall have no friends among them and you know we have to ride on the same machine.

I am not begging for the B. of L. E. but I am a believer in JUSTICE. If I steal your horse and money, that is no reason why you should steal another.

If we had fewer engineers in our Order we would not have the trouble and dissension among us, for they look at the right hand and we must look at the left.

The engineers are not working against us, they always do us some good as well as themselves, and if we as an Order would get their coöperation in all things just, we then would see our Order grow and flourish in size and strength.

- We always expect to take in firemen. We don't expect to keep engineers. If they wish to stay it is their lookout not ours, and I do not see any reason for a change of name, so I have no argument to be used.

If you want to know what the majority of the brothers think, in regard to the change of name, why not take a standing vote? You will find firemen vote for the B. of L. F.; engineers and others for a change.

You say a man has no business to write an article for publication unless he can spell correctly. I think in a *Magazine* published for the B. of L. F., all brothers should have room if they

come, and no comments offered unless asked for.

I suppose I am laying myself liable to a tirade of abuse from the Editor, but in justice to the brothers, I feel we must start the ball going and call for less comment and more attention to our good, by less abuse of the B. of L. E. from the Editor.

Yours in brotherly love,

W. H. Cross, Sec'y No. 183.

[Brother Cross, has peculiar views and we ask for them a careful reading. The attention of contributors to the Mechanical Department, is solicited, as they will see at a glance that the writer has not been a student of the wide range of topics discussed, including "firing and cleaning."

We note that Bro. Cross, animated by "brotherly love," says: "I have taken up the cudgel to find fault." He comes at us with a club—a shill lah, in regular Donnybrook-fair style, and because we "air our views" in the *Magazine*, we are to submit to cudgeling with Quaker meekness, and specially are we to remain silent, when the clubbing is administered in a spirit of "brotherly love," which so illuminates the motives of Bro. Cross.

Our esteemed correspondent says "the discussion of a change of name was started from spite towards the engineers." To say that Bro. Cross is mistaken, is putting it mildly. The assertion is entirely gratuitous—it is without foundation in fact—besides, there is an element of malignity in it entirely foreign to the "brotherly love" which prompts Bro. Cross to "air his views" in the *Magazine*.

It will be noticed that our correspondent declares that "the B. of L. F. was organized for a breeding pen for engineers," and that "it is right and proper that they (the B. of L. E.) should take the promoted men off our hands as soon as they are of an age to go."

It matters little what firemen of the B. of L. F. think or say upon other topics, while they entertain such degrading views of the mission of their own Order.

The desire, on the part of such firemen as Bro. Cross to have the *Magazine* endorse such debased views will not be realized while the *Magazine* is under its present management.

When the Brotherhood of Locomotive Firemen wants an editor who has no views, it can say so. It will have no difficulty in finding such men; the woods are full of them. When the B. of L. F. wants an editor, so cowardly that he dare not express his views, such a man can be had for the asking, and we conclude that when the B. of L. F. wants an editor of the *Magazine* who will make its pages plead for the degradation of the Order, while championing the interests of other organizations, the traitor can be found.

Under its present management the *Maga-*

zine, by the universal admission of men capable of forming an opinion, has advanced to the front rank of the Brotherhood organs of the times. The verdict is just, and satisfactory to Brotherhood firemen who are loyal to their own Order, or who have sufficient self-respect to resent an insult. For others, little cause is entertained for their flatulent rant.

The plea for *bad spelling*, we regard as entirely in consonance with other propositions submitted by the writer.

That we have too many engineers in our Order for its peace and prosperity is entirely in keeping with the "breeding pen" conception of the mission of the B. of L. F.

This *Magazine*, under its present management, will seek to promote the welfare of the B. of L. F. in the future as it has done in the past regardless of "cudgels" by whomsoever wielded. Whatever else may be said of it, its pages will never be stained by its present editor with sentiments of treason or disloyalty to its principles or its mission. If it cannot stand upon its merits, let it go down, but with its flag flying in defiance of its pronounced, or its covert enemies.—ED. MAGAZINE.]

PITTSBURGH, PA., Oct. 14, 1889.

Editor Firemen's Magazine:

It gives me great pleasure to be able to pronounce the first Union meeting of the United Orders of Railway Employés of Allegheny county a success, although the attendance at our secret sessions was not as large as it might have been, but we must bear in mind that the railroads centering in both cities are overrun with work at present, and a good many of our members were unable to attend; however, those present were a credit to their respective orders, and in all my experience of union gatherings, I must say that it has never been my good fortune before to find as attentive audiences as we had at our secret and public sessions, and the seed sown will show its fruit in the near future; if not, I will be terribly mistaken. I also wish to extend my sincerest thanks to the Lodges of the B. of R. R. B. and S. M. A. A. for their earnest assistance in the good work we have started, and my special thanks are due to Brother E. L. Davidson, of Good Will Lodge, B. of R. R. B., for the good work he performed.

To the Brothers throughout the land I will say, follow our example; get up meetings of the united orders wherever there are two Lodges to be found. It will do more good than all the boasted talk we find in the columns of our *Magazine* about the B. of L. E. federating or not federating; it is useless, and cannot accomplish anything. Three Orders have united, and if our brothers have anything to say in regard to federation, let them come to the point. There is lots to be said and done before federation can be called a crowned

success. The main point to be borne in mind is organization; organize and you will be independent of all orders that are not in favor of federating with us; organize and you will cement federation, so that it will be impossible for your enemies to break your ranks. If you do this, you can accomplish all that is necessary, and you will find that it will only be a short time until our Orders will be as well established as any other Labor or Trades Union, and I hope that I may live to see the day when railroad employés will have to show their working-card before they can gain a situation on any road, the same as is required by other Trades Unions. Don't think that this could not be accomplished, because there is nothing impossible under the sun; but it requires work, study, intelligence and good judgment, and I wish that all members of the United Orders would bear in mind that this piece of work is not to be left on the shoulders of a few members of our respective Lodges, but it is to have the assistance of each and all of us. Read Mr. Powderly's speech in our September Number—"It is folly for labor to whine about the oppression of capital when it has the remedy in its own hands." This is the greatest sentence I have ever heard him utter, and I say to you all to-day, study it over and you will find the true key to the success of federation.

Yours fraternally,
F. J. Thomer.

TROY, N. Y., September 22, 1889.

Editor Locomotive Firemen's Magazine:

I send you herewith an account of the official visit of our worthy Grand Master to Troy City Lodge, No. 315, which occurred on the evening of the 21st inst. Bro. Sargent was received at the depot in the afternoon by a delegation who took good care of him till 7 P. M., at which hour a special meeting had been called. A large number of local and visiting brothers from Lodges No. 149, 215, 210 and 200 were present. The meeting was opened in due form and then turned over to our Grand Master, who occupied the floor for two hours and ten minutes with his remarks which were highly appreciated by his patient listeners. Federation was outlined in all its important points, with many other good things for the good and welfare of the Order. At 10 P. M. the entire party adjourned to Wood's cafe, where a sumptuous supper was served, after which Bro. Sargent was given a splendid send-off with torpedo attachments. Says a local paper: "The Brotherhood of Locomotive Firemen met last evening at Green Island, and later on indulged in a sumptuous banquet at Wood's cafe, Union depot. Many engineers were present, and when the members of the Order who reside north left on the midnight train torpedoes were exploded on the track in their honor. The evening was a very pleasant one for those who participated in the festivities."

Yours fraternally,
Eugene Brizee.
Magazine Agent.

TO LOCOMOTIVE FIREMAN JAMES G. BLAINE, JR.

Dear Jim, while you are in the cab,
And socially than me no better,
I'll just fire off some surplus blab,
And write to you a rhyming letter.
I'll not say one offensive word,
My gallant lad, if I but know it,
Although expressions most absurd
Sometimes escape an humble poet.

You're certainly endowed with pluck;
You father's son need never labor;
You could your lifetime run amuck
Hobnobbing with each wealthy neighbor;
But Jim, there's more in having grit
To face the fight where steel rails rattle;
Than all your life at ease to sit,
And driving others on to battle.

Down at Bar Harbor every day
Your honored sire must snuff salt breezes.
His health is failing, papers say—
They notice every time he sneezes—
Perhaps his appetite is poor,
But Jim, avick! the devil a danger
But that your own, you may be sure,
Will let you masticate a Granger!

A can of blackstrap 'neath your nose
Is called a first-class appetizer;
The coal dust on your face and clothes
Your lady love it may surprise her;
But Jim, she'll love you just the same
If you are dusky as Othello;
Because you nobly play life's game
Like any honest, manly fellow.

A fireman's lot is pretty tough;
The acid, rotten stone and polish,
Besides all other blasted stuff,
Some future day you must abolish;
You'll learn the furnace door requires
Sufficient work for what they pay you;
Poor coal, and cleaning dirty fires.
Upon the road's enough to flay you.

Your spinal bone will sorely ache
Before you do the slash bar master!
But never a vacation take,
Slap on the palm a strengthening plaster.
Just learn the knack to twist the scoop—
'Tis in your wrist the ace's hidden—
Below your hip joints never stoop;
And know that wasting coal's forbidden.

Hang on until the snow-drifts high
Are all around your engine growing,
When hell's hurrah shrieks through the sky,
For days and nights of constant snowing,
'Tis then you'll learn our lot is hard;
We never snooze on crumpled roses;
And many times our sole reward
Is frozen fingers, ears, and noses.

Some day you'll be a president
Of some trunk line, in some big city;
And, when the boys on justice bent,
Shall interview you in committee,
You'll understand each word they'll say.
When they are all their wrongs revealing;
And from the knowledge gained to-day,
You'll listen with a kindred feeling.

Henceforth I'll watch your bright career
Through all its rapid, upward stages,
As fireman, Jim, and engineer,
Two places you must toil for wages.
And when you leave us, don't forget
How much poor engine-men must worry;
Our lives are rounds of constant fret,
Eked out in an eternal hurry.

Shandy Maguire.

WATERTOWN, N. Y., September 30, 1889.

Editor Firemen's Magazine:

Will you please grant me standing room in a

little corner of our *Magazine*? I would like to let some of our members know how easy and quiet No. 212 is moving along. We have forty members in good standing. We are out of debt, and have a nice little bank account; and peace and harmony reigns supreme, and we are all happy.

I noticed in the August number of our *Magazine* that Bro. Watts, of Lodge No. 48, believes in saying nothing, but saw wood and do the best you can. Well 212 has a member built in the same way, and it is no other than our worthy Receiver, Bro. Nichols.

Here is one instance of his stillness; one evening he starts out to take a walk, and in his travels found a *residence* which suited him. He leased it, and went to work furnishing it in grand style, and one day Bro. Nichols was missed from his engine, and the next thing as we read the daily paper, this met our view:

"Nichols—McLorley. In this city August 30, 1889, by the Rev. C. W. McCormack, Fred. Charles Nichols and Miss Mary McLorley, both of this city."

They went to their new home took dinner and are living in a paradise of their own like two "turtle doves," and when we say a word to him his reply is "I am well satisfied, say nothing." Now, if this is not sawing wood with a muffled saw, I am a jury and no judge. There are more of our members who are thinking of adopting Bro. Nichols plans. We are watching them all. The boys are smoking "pinks" and wishing Mr. and Mrs. Nichols long life and a happy one. I think I have filled that little corner, and I will leave the rest for some one of our brothers to speak for 212 as it is one of the best in the Order.

Horton.

GREEN BAY, WIS., October 6, 1889.

Editor Firemen's Magazine:

On Thursday, evening, October 3d, 1889, occurred the marriage of Bro. J. A. Parkinson and Miss Ella Hevins, at the residence of the bride's parents, Mr. and Mrs. J. H. Hevins, Green Bay, Wis. We all join in wishing the newly married pair all success in life.

Bro. and Mrs. Nichols are rejoicing over their newly arrived daughter, which came September 15th, 1889. We all hope she will have health and grow up so as to enliven them in their old age. She now bears the name of Ruby Elizabeth. You can find out where this name was taken from by applying to Bro. Nichols. There is history connected with it.

Bro. and Mrs. Holan are also the happy possessors of a newly born daughter, the date of whose birth I have forgotten.

Bros. Schutt, Erdman, Hagar and Parkinson have been promoted to the right hand side, but it does not make their heads swell so as to want to join the B. of L. E.

We are going to have our sixth annual ball Tuesday evening, December 10th, 1889, and expect a better time than last year. More anon.

D. E. H.

For the Magazine :

MY STEREOPTICON.

For many years, night after night,
I've rode behind my magic light;
Ne'r tiring of the charming hues,
Presented in dissolving views,
That glide within its silvery ray,
Then slowly melt and fade away.
Like fairy lands and farms they seem,
Or visions of a poet's dream.
A meadow with its yellow sheaves,
A woodland with its autumn leaves,
That float and light upon the train,
Like butterflies or golden rain.
And then there comes a grassy dell,
Where through the summer, daisies dwell,
Where lilies nod and say good night,
Then go to rest in robes of white.
I see fair Luna's silvery beams
Reflected by a thousand streams,
That dance beneath her mellow light,
Forgetting that 'tis ever night,
I see them hurry down the hills;
I see them turn the busy mills;
And as we cross from ridge to ridge,
I see them glide beneath the bridge,
And as they softly flow away,
There comes to view a silvery bay,
Where stately ships their anchors cast;
While seeking shelter from the blast;
And now when o'er the bay we drift,
Before us stands a rocky cliff,
That rises to a height sublime;
While up its face the ivies climb.
To shun the rocks our path must swerve,
And so we pass around the curve—
That brings us to a village quiet,
With cottages of snowy white.
A pasture and a field of grain;—
An orchard and a country lane;—
A sycamore, the wild grape vine;—
Some startled sheep and wondering kine.
A stallion comes and stands at bay;
Then frightened turns and runs away.
And when I come to pine lands drear,
I often see the timid deer.
Held by my lantern's brilliant ray,
Then break the charm and bound away.
When clouds blot out the moon and stars,
My eyes look on two gleaming bars;
Two glistening rods that seem to mark,
A winding road to dungeons dark;
With threatening rocks on either side,
Where demons roar and serpents glide;
In terrible anger from the skies,
That shock the nerves and blind the eyes.
But soon we bid the storm adieu;—
And now a city comes to view.
I see afar upon the heights,
A hundred thousand twinkling lights;
Here are the factories and the mills;
The harbor and the burning kilns;
A bridge to cross the river wide,
And now we're on the other side.
A station and a hundred tracks,
Steam engines with their smoking stacks,
That dart about midst hissing steam,
While signals change from red to green.
And thus the pictures come and go,
With Summer's flowers and Winter's snow.
They do not always please the eye,
For often in them, brave men die.
The misplaced switch, or yawning space,
Left by the swollen waters race;
The leading section round the bend,
A mighty crash and then the end;
The light of life forever gone.—
Crushed with their Stereopticon.

E. B. Harris.

BARABOO, WIS., Sept. 12, 1889.

Editor Firemen's Magazine :

On Monday, Sept. 9, Mrs. August Melcher, mother of Brothers E. A. and F. Melcher, died, after a long and painful illness. She was one of the kindest mothers and the most faithful of

wives. In trouble and affliction we are all upon an equality, and the sorrow of our brothers is just as intense, and just as hard to bear as that of those who move in the higher walks of life. We know that father, brothers and sister have hosts of sympathizing friends to help in this their hour of grief, and render it less terrible. Not only is the father and husband deprived of the love and companionship of his wife, but he must take up the burdens she laid down and bear them in addition to his own. Thus is his bereavement doubly severe to bear. When husband and wife have lived together for two score years or more, they have, if congenial, become absolutely necessary to each other. The world and its vanities are forgotten; they live for each other; they are unhappy when separated; their loving devotion to each other, as in the case of Mr. and Mrs. Melcher, becomes beautiful. The death of the wife leaves the husband inexpressibly sad and lonely, but there is some consolation left to the aged father. He is not entirely alone, he has two manly sons to help him bear up under his great loss.

Dixon.

DANVILLE, ILL., Oct. 9, 1889.

MR. EDITOR:—I have sad news for you from No. 63. The last time I wrote you we little thought that we were so soon to be shown the uncertainty of the things of this life.

One of the Brothers of this Lodge has been called to his lasting rest place. On the 10th day of September Bro. Secretary Wm. Corbit departed this life after five weeks' illness with typhoid fever.

Brother Corbit had been a member of Hercules Lodge or about eight months, and in that time became one of its most beloved and active members, always attending meetings when he was in the city, taking an active part, and even during his long confinement, when he could not leave his room, he was always greatly pleased to hear how the Lodge was getting along.

Willie Corbit, as he was familiarly known by almost everybody in this city, became identified with the C. & E. I. Railroad as a locomotive fireman about two years and a half ago, and served his employers faithfully up to the time he was taken sick. The exemplary life which he led would serve well as a model for us to fashion our lives after, both as employes and citizens in our daily routine of life, as well as members of the Brotherhood of Locomotive Firemen.

After the funeral services at the house, conducted by the Rev. C. H. Little, the remains were carried to Springhill Cemetery and there interred with Brotherhood honors, the beautiful funeral ceremony of the Order being impressively conducted by Master H. J. Bohn and Chaplain H. E. Kyger.

Appropriate resolutions of regret and sympathy were adopted by the Lodge, and all other things done to show in what high regard the deceased was held by those who knew him.

Yours fraternally, C. G. B.

TRINIDAD, COL., September 15, 1889.

Editor Firemen's Magazine:

Sometime ago I wrote you a letter for the *Magazine*, which, for some cause, was not published. Now I would like to ask you, or any of the brothers, through the *Magazine*, how many brotherhood men there are in the South? Bro. John Perry left here in search of work sometime ago, and went south, where he did not have any good luck in getting work, and worse luck in getting over the roads. He says some of the firemen he met, are afraid to say their souls are their own. He says they just belong to the Order, and that is all. They are not brothers. We have got a pass system, and I think if they had an iron jaw, they could have the same.

Engine 6 blowed up on the south end of our system the other day and nobody hurt, the engine was pulling a passenger train and working steam on a hard hill, the first time I ever heard the like. Now, I think, if those men who claim to be brothers would try to help a brother, it would be better for all concerned.

S. W. Hoage.

[In the foregoing, a charge is made against our brethren of the South. But it should be understood that firemen in that section are not worse than in any other section of the country. There are weak, spineless firemen to be found almost everywhere, selfish creatures who have no fellow feeling for any one. They are not animated by any fraternal feeling whatever. But such men constitute a small minority of our membership, and it is not wise to intimate that it is otherwise. Brotherhood firemen, as a rule, are noble men, quick to respond when a brother needs help, and they are the salt of the Order. They are in the south as well as in the east, west and north, and those who where disregardful of Bro. Perry's needs, do not represent the manhood of our Southern membership.]

The fact that there are brotherhood firemen of the type referred to, is lamentable. It is noble to help a brother fireman to obtain work, generous to help him on his journey in search of employment—and this *Magazine*, time and again, has voiced this important duty, and we hope that such complaints may cease.—ED. MAGAZINE.]

TUCSON, ARIZ., August 9, 1889.

Editor Firemen's Magazine:

I take great interest in the communications from the different Lodges, and have long looked for some one to write from No. 91, but all seem to wait, as I have done, for some one else to write.

Our Lodge is in a flourishing condition. We number about sixty members, and have in our treasury something over \$800 at present. The boys are joining our ranks as fast as they become eligible to membership. We have just ordered a new regalia that will cost us about \$150 laid down here. The B. of L. F. boys here do not believe in having anything shoddy, and

when we get our new regalia we can feel that we have something to be proud of. I have been very much interested in the ideas expressed by the boys in regard to a new name. At first, I was not in favor of it, but now, I am. I thought, as several others did, that if the name of fireman was not large enough for a B. of L. F. man after he had crossed the deck that he could quit us and join the engineers; but we don't want them to do that! An engineer told me a few days ago that he wanted to withdraw from the B. of L. E. and would like to join the B. of L. F., but he could not as he was no fireman nor had he ever belonged to the B. of L. F., and, that, he would join us if our name was changed, also, that there were several others, engineers, that were in the same notion as himself. That was something new, a new idea to me. I had not thought of increasing our membership from the ranks of the engineers. Formerly it has been the reverse. I think the "Brotherhood of the Footboard" the best name that has been suggested yet and, as to the insurance, I would like to see the policies made \$2,000 instead of \$1,500. I think we could stand it, if it did cost us a dollar extra once in a while.

Hoping this will find room in your *Magazine*, I remain,

Yours fraternally,

Windy.

[We are confident that the more thoroughly the new name proposition is investigated, the more clearly it will appear that the suggestion embodies wisdom and vitalizing power. We have not advocated a change of name for the purpose of proselyting, but rather to erect a barrier against such proceedings. We are content to hold our own and to make our name significant of our actual condition. We would retain within our ranks our own membership. That is the supreme demand. Incidentally we will accept others but proselytism is not our mission.—ED. MAGAZINE.]

To Receivers.

A little attention on the part of Receivers, will save the Grand Lodge a deal of unnecessary trouble and embarrassment, and we ask their earnest attention to the following mistake which many of them are constantly making:

We state, first, that money should *always* accompany Statements.

The mistake, numerous Receivers make is, to forward to the Grand Lodge Statements and money separately.

It is easily seen, that when the money comes without the Statement, it is impossible to know where it comes from or what to do with it.

When the Statement comes without the money, the embarrassment is not less provoking.

What is wanted, is, that the money and the Statements shall be *received* in the *same* envelope, the money always accompanying the Statement.

This direction is plain and simple. There need be no more such mistakes as we complain of.

Will Receivers please take notice.

Personals.

P. A. DONAHUE is New York's favorite.

J. S. COWAN, of 156, paid us a short visit lately.

T. W. KERNS is general utility man at Mobile, Ala.

WM. CARMICHAEL presides over Colonial Lodge, No. 119, with marked success.

A. H. SUTTON, the old veteran of Decatur, is worth his weight in gold.

WILLIE WHITEHEAD is now running on the Brooklyn Elevated, and doing well.

W. F. HACKET holds the gavel at Fairbury, Neb., and is meeting with success.

THE frost is on the "pumpkin" and F. P.'s in the soup. So say the Lyndonville boys.

As Secretary and Collector of J. M. Dodge Lodge, No. 79, Chas. E. Stone fills the bill to perfection.

THE question at Peoria is, "where was Bro. George Watt when the electric light was turned on.

WM. HUGO is, as ever, on the alert in the interest of the Order at the Capital city of the Hoosier State.

ALEX. WILLIAMS, of De Soto, is one of the most aggressive and progressive members in the State of Missouri.

MINERAL KING Lodge, No. 129, has a faithful officer in J. S. Rogers, Receiver, than whom there is no better.

MR. P. O'BRIEN, of Division 56, B. of L. E., Keokuk, Iowa, is an earnest and effective advocate of organized labor.

J. I. DAVIDSON is the leading spirit in the State of Georgia. He has been of immense service to the Grand Lodge in that locality.

WE were pleased to meet Mr. E. C. Weller, a most agreeable gentleman, prominently connected with the B. of L. E., at Keokuk.

BRO. JAMES LEAHY, *alias* "Smiles," still walks the quarter deck of Chicago Lodge, No. 95, as popular as ever. May his shadow never grow less.

WE had the pleasure of meeting Bro. Maroney, of No. 39, at Keokuk, and found him an excellent fellow as well as a stalwart Brotherhood man.

BRO. L. L. HOOD, of S. M. Stevens Lodge, No. 150, is pulling fast passenger train on the S. M. & S. W. Railway, and he knows how to do it, you bet.

CHRISTMAS is coming, and we suggest that Bro. Mahoney, of No. 3, be prepared for the occasion. Pet kittens with bells on do not grow on bushes.

ANNOUNCEMENT is made of the marriage of Bro. Pat. Hannifan to a young lady in Wisconsin, and his numerous friends tender their hearty congratulations.

IT is said that Bro. Geo. Auchter, of Adopted Daughter Lodge, No. 3, has a standing wager that he has the biggest, brightest and smartest boy in Hudson county.

AT the organization of the Lodge at Gatesville, Texas, Bro. Jos. Ellis, of No. 24, rendered valuable service, which was fully appreciated by V. G. M. Hannahan.

WM. RILEY, Chairman of the General Board of C. K. and N., is spoken of in high terms by his associates. There is nothing small about him, the boys say, but his whiskers.

J. S. SHEEHAN, of 269, is reported to have had a good time on his recent visit to Niagara Falls. We hear that he "shot" the rapids, but this is doubtless a campaign fabrication.

JOHN TIERNEY, of Kansas City, has a royal welcome for all good Brotherhood men. He is a pedestrian of no small note, as those who have "done" Kansas City with him will certify.

BRO. JAMES DWYER, of Guiding Star Lodge, No. 130, under the delightful influence of what the poets call "love," was recently married, and received the congratulations of hosts of friends.

W. A. McMILLAN, Collector of W. F. Hynes Lodge, No. 48, is running the stationary engine at the Peoria passenger depot. He is one of the pillars of the Lodge, and the boys all like him.

P. L. CUTLER, Secretary and Collector of Blooming Lodge, No. 40, is certainly the right man in the right place. He is a painstaking officer, and enjoys, as he deserves to, the good will of all.

MARTIN KAVE, of Acme Lodge No. 228, runs the engine that pulls the private car of the directors and officials over the D., L. & W. Bro. Kave enjoys the reputation of being a first-class engineer.

IT is gratifying to know that Frontier City Lodge, No. 92, at Oswego, N. Y., is wide awake and doing good work. Energy is required to keep abreast of the times and 92 gets there all the time.

MR. P. HAGERTY, of Excelsior Lodge, No. 11, being the father of a bouncing twelve pound baby, of the feminine persuasion, is the happiest man in New Jersey, and the boys of No. 11 are expecting lots of cigars.

TWIN CITY LODGE, No. 39, long ago eliminated from its vocabulary the word "fail" and all its train of synonyms. It has been tried and found equal to every emergency, and is now forging to the front again.

THE boys of No. 93 are to have a ball on Thanksgiving eve, and Vice Grand Master Hannahan is specially invited, with the understanding that a telephone, in good working order, has been put in for his benefit.

CANAL CITY LODGE, No. 255, has in its membership Bros. J. M. Zorn and S. S. Small, of whom it is simple justice to say they are excellent members, who are zealous workers for the good of their Lodge and of the Order.

WHEN the Grand Master comes along ask him how many seeds there are in an adult pumpkin, and whether he knows the difference between a slice of that kind of fruit and a tempting looking morsel of Vermont cheese.

THE French gentleman at Chicago who ordered "smoked Hannahan" was told by the waiter that there was no such article on the bill of fare. Smoked halibut is what he wanted. John is hardly ready to be smoked yet.

THE boys of Lyndonville evidently believe that the Grand Master is fond of squash. A bountiful supply by express, seasoned with charges, would lead to that conclusion. The cuckoo has not yet put in his appearance.

ONE of our Jersey City correspondents remarks that Adopted Daughter Lodge, No. 3, is booming. He says: "Bros. Martin, Sweet and Hutton are hustlers of the first order; Bro. Mahoney sees the kitten regularly, and purrs with contentment." We are pleased to learn that the members of No. 3 are doing so well, and felicitate them on the hopeful outlook.

THE name of Sam Quackenbush still adorns the roll of Golden Gate Lodge, No. 91. Sam is a brotherhood man from the ground up, and it is a pleasure to us to know that he is running one of the best engines on the Pacific coast.

GEO. C. WATT and W. Baugh, of No. 48, were with us at the Gate City, and we found them genial, as usual. Had we followed Bro. Watt (who knows Keokuk thoroughly?) we would still be headed for Australia looking for the hail.

WE are glad to learn that Brother James R. Morris, of South Easton, Pa., was promoted August 26th, and took his place at the throttle. The promotion was a reward of merit, and we anticipate for our Brother a successful career as an engineer.

O. A. ELLIOTT made himself specially valuable at the Keokuk meeting. He is wrapped up in the Brotherhood and never hesitates to make any sacrifice to advance its interests. Ask Bro. E. by what special process of calculation three from two make five.

THE thanks of Bro. and Mrs. G. W. Sebastian are extended to the Crookston firemen for their elegant present of a set of hand painted china on the occasion of their recent anniversary. The present was worthily bestowed and heartily appreciated.

WE felicitate Bro. Mike Bannon, Master of Sunny South Lodge, No. 148, of Tyler, Texas, upon the return of his family after an extended absence in visiting relatives and friends. Such reunions are always pleasant, and home is made more beautiful and bright thereby.

THE Secretary of Sprague Lodge, No. 133, Bro. H. A. Moore, has taken to himself a life partner, and enthusiastically remarks that "marriage is not a failure." We congratulate Bro. and Mrs. Moore and wish them, in rich abundance, the good things of life.

THE Grand Officers are under special obligations to Bros. Joe Turpin and W. E. Sage, of Blooming Lodge, No. 40, for courtesies shown them while at Bloomington. The few hours spent in their company were much enjoyed, and we remember our brief visit with pleasure and satisfaction.

WE are pleased to record the fact that the members of Acme Lodge, No. 28, turned out in full force to witness the inauguration of the new Lodge at Duumore, Pa. That's the right thing to do. When a Lodge is born, give it a grand send off, with a thousand wishes for its growth, strength and prosperity.

WE have a note from Bro. A. L. Jacobs, of Buffalo Lodge, No. 12, saying that his mother died at Tonawanda, N. Y., September 18th, at the advanced age of 80 years and 121 days. She was a most estimable lady, and always had a warm place in her heart for our Bro. hood, and was a constant reader of what she called the "Firemen's Book"—the *Magazine*. Bro. Jacobs' father is still living at the patriarchal age of 86 years. He was employed on the first railroad built in New York.

BROTHERHOOD men visiting Bloomington to attend the camp meeting in progress there will do well to avoid Turpin and Sage. We speak from experience. Both declared emphatically that they knew the way to the grounds via the bee line route. We followed first one then the other until we had traveled something less than seventeen miles, and were hopelessly lost. Each blamed the other for the predicament, and finally a friendly tramp led the way out of the wilderness. Piously inclined members will do well to heed our friendly warning.

FRANK HANNAHAN, brother of J. J. Hannahan, has been reappointed *Magazine* agent of Garden City Lodge, No. 50, and has resolved to roll up a magnificent subscription list for the *Magazine*. Right. It is to be hoped that all the agents of the *Magazine*, will be inspired by the same laudable ambition.

THE members of Washington Lodge, No. 13, are opulently congratulating Brother Joe Mohr upon his wonderfully good fortune in having secured for a wife Miss Katie Hopkins, one of Elizabeth's fairest belles, and while wishing Joe and his bride a long and happy life, expect enough cigars to have a smoke all round.

THE pleasant announcement comes to the *Magazine* that Bro. Frank Kerns, a popular young member of Federation Lodge, No. 122, was married on August 6th to Miss Eliza Davis, a charming young lady of Clinton, Ill. The boys of Federation Lodge wish the federated Brother lasting success, in which the *Magazine* joins most heartily.

RALPH SHERBURNE, *Magazine* Agent of Vigo Lodge, No. 16, has been confined to his home with a serious attack of rheumatism, the result of an injury to his knee sustained about two years ago while getting on his engine. Ralph is very popular among the boys, and they will be delighted to learn that he is improving, and there are good prospects for his early recovery.

CALVIN W. WOLCOTT, who wields the gavel, when Garden City Lodge, No. 50, is in session, does it up to the hilt and in a way that makes Pope's declaration, that,

"Order is heaven's first law"

quite popular with the boys, and they say it is also good in the Lodge room.

E. J. KELLY, Secretary and Receiver of Gate City Lodge, No. 93, is entitled to much of the credit for the success of the union meeting lately held at Keokuk. Bro. Kelly is a thoroughly active worker. He comprehends fully the mission and purposes of the Order, and is withal a genial fellow who, once met, is never forgotten.

CON DUGGAN, Esq., an old-time member of Buffalo Lodge, No. 12, was recently the guest of Vice Grand Master Hannahan at Chicago. Con is now Sergeant of the Buffalo Police Force, and is one of the most popular officials of that city. During the visit of Bro. Duggan to Chicago in company with his friend O'Brien, late a member of No. 12, Bro. Hannahan did the honors in royal style, and every courtesy was shown them by the officials of that city.

MISS MARY E. NEENAN has won the regard of the members of Gate City Lodge, No. 93 by her many acts of kindness and her unselfish devotion to the interests of the Brotherhood. The basket of cut flowers presented by her on the occasion of the union meeting, and numerous other testimonials at balls and other entertainments, bear eloquent testimony of friendship and good will which the members appreciate and will gratefully remember.

E. GALLAGHER, of Gate City Lodge, No. 93, may justly lay claim to being one of the oldest Brotherhood firemen in the country. He joined the International Firemen's Union in 1888 and was a member eleven years. When the I. F. U. merged in the B. of L. F. he became a member of the latter Order, and has been on our rolls during the past ten years, making his membership cover a period of twenty-one years. He has been running an engine on the Rock Island sixteen years and is comparatively a young man. When our Order is referred to as a *Fireman's* Order with the advice, "Let 'er go Gallagher," the answer comes back, "She's good enough for me." Bro. Gallagher is as loyal to our Order as a father to his family.

WHILE the union meeting was in progress at Keokuk, the Salvation Army opened its programme in the streets below, and for a time the Grand Master was required to run with his lung-valve wide open and his voice down in the corner. It was ascertained that the Salvation Army were trying to convert Bros. G. C. Watt and W. Baugh, of Peoria.

THE numerous friends of Brother E. E. Gruley will sympathize with him upon the loss of his estimable wife, which occurred September 28th. Mrs. Gruley was a lady who won the esteem of all who knew her, and her death is universally lamented by her neighbors and numerous friends in Rocklin, Cal. It is said that "Death loves a shining mark," and all who were so fortunate as to enjoy the friendship of Mrs. Gruley admit the truth of the saying.

FRANK J. THOMER, Receiver of Holbrook Lodge, No. 378, at Chartiers, Pa., is one of the most active men in the Order. He has zeal, but not in excess of judgment, and as a worker, he is tireless; nothing escapes his attention. An ardent advocate of federation, he was the life and soul of the great federated meeting held in Pittsburgh on the 30th of September. He has eliminated the word "fail" from his vocabulary. When others hesitate, he advances, and if there is a "forlorn hope" to be led, Brother Thomer is ready. To such men, things may look a little gloomy sometimes, and it is then that massing their courage they snatch victory from the jaws of defeat.

CHARLES W. MAIER, member of Great Western Lodge, No. 24, and prominently identified with the Joint Board of Adjustment of the M. K. & T. system is a Brotherhood man in all, that in its best sense, the term implies. He intuitively grasps situations and conditions, and in estimating men and measures, his mind works like a lightning calculator. Bro. Maier, about three months since was promoted to the right side on the M. K. & T. Railway, but the interest he takes in the welfare of firemen is in no regard abated. That he will succeed as an engineer goes without the saying, and in whatever position his good fortune may place him he will be found to be the right man in the right place.

WE regret exceedingly to announce the resignation of Brother Sidney Vaughn as Secretary and Receiver of Dominion Lodge, No. 67, Toronto, Ont., but more particularly do we regret the resignation because it is the result of failing health. Bro. Vaughn, as Secretary and Receiver of his Lodge, has met every requirement, and as a member of the Grand Executive Board of the Brotherhood has won, in a large measure, the confidence and esteem of his associates. In going to New Orleans to find employment and health the best wishes of the Brotherhood go with him, and it will afford the *Magazine* great satisfaction to announce that in this, as in all other things, his most sanguine hopes have been realized.

GATE CITY LODGE, No. 93, has a member, Bro. O. A. Elliott, who is so exceedingly fond of apples that had he been Adam in Eden he would not have waited for Eve to have invited him to take a bite, but would have skinned up the tree and plucked the fruit regardless of snakes, at least such is the opinion of those who saw him reaching for an apple far out on a limb, and which, dropping without being caught, hit Bro. Elliott on the forehead, leaving a rosy mark, and with such force that but for the influence of religious education and the restraints of Gate City Lodge would have resulted in sulphurous literature, such as delights his royal forked-tail and cloven-footed highness, and for which he promotes his firemen to superintendents of smoke stacks.

WE are deeply pained to learn by letter from Bro. James R. Morris, of South Easton, Pa., of the death of his devoted wife, under circum-

stances which make the sad event more than unusually sorrowful. Bro. Morris had bade his wife good bye to take his place on his engine on the morning of September 3d, and a few short hours later was summoned to his home to gaze upon her lifeless form. The affectionate wife and mother had passed away, leaving for the sorrowing, heart-broken husband an infant but a half hour old, as a priceless souvenir of an ordeal which cost the mother her life. We are not surprised that Bro. Morris feels that the world is dark and his fate a hard one. In such cases words of condolence, however warm, are of little avail—only time can heal the wounds death inflicts, and though friends will be kind and sympathetic, time alone can supply the needed balm. We hope that the infant child may live to be a blessing to its father, and that its childish prattle will in some measure assuage his grief.

A High Compliment to J. J. Hannahan, V. G. M. B. of L. F.

J. J. Hannahan, Vice Grand Master of the Brotherhood of Locomotive Firemen, has been placed upon the World's Fair Committee of Chicago. Never in the history of Chicago, have its foremost men been more intensely aroused over any question than at present distinguishes their efforts to secure the World's Fair in 1893. The committee having the matter in charge is made up of men of wealth, intelligence and influence, and the selection of Bro. Hannahan as a member of that committee is not only a high compliment to him but also to the great Brotherhood of which he is one of its grand officers. Bro. Hannahan is in many regards well suited and qualified for a position on such an important committee. He has a large acquaintance, not only in Chicago, but throughout the country. He is a man of popular address, with quick comprehensions of what is required to secure success, and being a prominent leader in a great order of workmen, he is in a position to render the committee valuable services, and being a man of tireless energy his influence in securing for Chicago the boon she so much desires will not be the least of those who have the great enterprise in charge.

NOT long since we had the pleasure of holding a meeting at Bloomington, Ill., under the auspices of Blooming Lodge, No. 40. There was a good attendance and an interesting time was had. The good of the Order was discussed and some good points were brought out. Blooming Lodge is composed of a body of young men, active, intelligent and wide-awake, who are a credit to the Order. Brotherhood men who visit Bloomington doubtless receive a cordial welcome. We enjoyed the meeting exceedingly, as also the remainder of our visit, which was spent in social intercourse with the boys.

WE are requested to say that the Lodges of the federated orders of Allegheny City, Pa., will hereafter meet once a month. The place where the meetings are to be held, will be announced in the columns of the *Magazine*. The next meeting will be held at Christian Hall, Chartiers, Pa., November 10, 1889, at 1:30 P. M.

Shandy Maguire's Poem.

The *Magazine* esteems it a privilege to present to its readers the beautiful and appropriate poem, read by Shandy Maguire at Denver, at the great meeting in honor of the B. of L. E., held in Tabor's Opera House, Wednesday Oct., 18. It was as follows:—

Once again has old Time o'er a year traveled
fleet,
Till, in annual conclave, at Denver we meet
'Neath the shade of the Rockies, tremendous,
grand,
From their base to their summits, the pride of
our land;
For they tower to the skies, and observers, in
awe,
Recognize the divine and revere the great law
Of creation, that reared them, fit types of the
West,
Having prodigious wealth unexplored in their
breast.

This hospitable city has opened its doors
To receive us in friendship, and in through them
pours
A procession of men, brawny offspring of toil,
Pioneers who advance, disregarding the moil
That awaits them, so commerce new arteries
find,
And great cities like Denver spring skyward be-
hind.
We are here from the East, where Atlantic's
waves sweep
In the fleets of all nations from over the deep,

Trackless waters, with wealth every hour to our
shores,
Bringing products of all foreign lands to our
doors.
We are here from the South, the savannas, the
fields,
Where the soil a rich crop to the husbandman
yields;
Where the factories over her borders increase
Every course of the sun, since the dawning of
peace.
We are here from the North, from Canadian
plains,
From her hill and her valleys, all traversed by
trains,

International boundaries know we not, save
The tides, that the shores of this continent lave.
Over these mountains adjacent came men. In
each breast
Is the enterprise found that is building the
West.
Up in prosperous states, on Rapidity's wings,
In their youth far surpassing old realms of
kings.
And what can we do?
To enact wholesome laws,

Which shall guide us, protect us, and win
The applause of employers and railroad in-
vestors.
We ask
A review of our past. You may take us to task
If we've e'er as an order proved faithless to
trust;
Search the twenty-six years of our life and you
must
Be convinced that our aim has been honest
throughout
Our whole history long, not a margin for doubt.

Will you find. We've had clouds sweeping over
our sky
On occasions when men our requests would
deny;
As weak but for justice, and pleaded for right
in chaste language before them, in Heaven's
broad light;

Not like base fawning serfs who can bend at the
knee,
But erect in our manhood, respectful and free.
Soon the rays of the sun of our righteous cause
Did dispel all our clouds.

We win public applause
When we give up our lives to our duty, and
Stand, with our firemen beside us, our levers in
hand,
To avert threatened danger. To us it is death
If we err in our judgment. With cool, gathered
breath
We are there, ever ready, prepared for the shock,
And determined to stand just as firm as the rock
In the midst of yon mountains, till the danger is
passed

And the passengers saved; may be breathing
our last
Breath of life in the struggle, full conscious, re-
signed
To our fate, if but saved is the train load behind.
Holy writ stands the test of a skeptical eye
To refute or distort it, and bright is the page
With divine inspiration, where God has decreed.
To protect the distressed is a virtue indeed,
Sure to bring a reward in the mansions of bliss

When our pilgrimage ends in a world here, like
this,
We can stand at the bar of Omniscience when,
In His glory, He comes to weigh actions of men.
And can feel that the widows and orphans we
saved
From due hunger shall bless us; their protectors
braved
Dismal death, but were conquered; they fell in
their strife—
They were victims of duty—each one gave his
life

So that others might live; scan your eyes on the
land,
Note the heroes who died with their throats in
hand
There's a future, whose veil we can ne'er pene-
trate,
It is silent, behind it, and fruitful with fate
For our order. No seer in his wisdom can tell
What awaits us, if ill be our lot or if well;
But a vision prophetic enraptured I see,
'Tis inviting us onward to days yet to be;

They shall dawn in full splendor, if wisdom shall
guide
All our actions at Denver. My brothers, the
tide,
Known as "public opinion," shall bear us in
case
On its breast, calmly on, undisturbed by a breeze,
If we only be prudent, be wise, and be true
To our principles, keeping the public in view.

At the completion of his recitation, Miss Mag-
gie McGill rushed from the right wing of the
stage bearing a beautiful floral harp, the emblem
of the land where the shamrock grows. Miss
McGill briefly said:

"Mr. Shandy Maguire, as a tribute to genius, I
present to you the emblem of our country."

The bard of the Brotherhood was visibly sur-
prised, but responded feelingly as follows:
"Words cannot express my gratitude for the
present which this young lady with the confi-
dence of a heroine has just given me. Such
generosity is typical of the great Western ladies,
and I appreciate it very highly."

The harp was made of red, white and yellow
roses, with fern leaves woven in happy harmony
around the edges.

Important Action.

The action of the General Board of Adjustment of the Brotherhood of Locomotive Firemen on the Santa Fe system, at the late meeting of the Board at Topeka, Kansas, in regard to certain matters of vital interest to the Brotherhood is of special importance.

The action of the Board to which we refer, declared an "abiding faith in federation," and a declaration equally emphatic in favor of a "new name" was recorded.

In addition to the action named, the "stand taken by the *Firemen's Magazine*" was unqualifiedly indorsed.

The men composing the Board of Adjustment on the Santa Fe system are eminently capable of arriving at correct conclusions in all matters pertaining to the welfare of the Brotherhood, and their declarations will be accorded a hearing throughout the jurisdiction of the Order. They are in positions to speak advisedly. They, like others in their positions, are daily confronted with practical problems, which, in some measure at least, they are required to solve. They know the men on their system, know their views upon the current questions relating to the welfare of the Order. In the case of the Santa Fe system, it is safe to say Brotherhood firemen favor federation and a new name. Why? Federation embodies wisdom to an extent that those opposed to it are compelled to nurse their antagonism in silence.

As to the "new name," it has for its support such cogent reasons that those who are opposed to it are required to ignore facts and conditions, and trust to traditions and sentiment, neither of which are of any consequence when right and reason demand recognition.

As to the *Magazine*, the Board of Adjustment for its indorsement of the course it has pursued, merits and receives our warmest thanks. The *Magazine* is on record. Its printed pages can be called up as witnesses, can be interrogated and made to answer. It will ever be a source of delight to us to have this brought into court when the B. of L. F. is on trial. If at any time the *Magazine*, under its present management, has covered when the rights and interests of the B. of L. F. have been involved, if it has done less than defend when defense was required, or has hesitated to attack when every sentiment of manliness and independence demanded such a course, then it will be in order to demand a change of management. Let the trial come, and we shall not hesitate to champion the course pursued by the *Magazine*, and what is specially gratifying, we know how promptly and how gallantly ten thousand sturdy Brothers would come to our support.

At the late funeral of Brother William Corblitt, of Hercules Lodge, No. 63, a number of the members of Vigo Lodge, No. 16, were in attendance, and were most kindly received by their brethren at Danville. The funeral, in all its appointments and ceremonies, bore high testimony of the es-

teem in which the deceased was held by his comrades, and however mournful, was a beautiful tribute of Brotherhood regard.

ED. F. O'SHEA, Esq., Grand Secretary and Treasurer of the B. of R. B., in his report of receipts and expenditures for the fiscal year ending August 31, 1889, shows receipts amounting to \$284,351.55, and disbursements to the amount of \$282,446.11. During the year 171 death claims and 77 disability claims were paid.

We acknowledge the receipt of an invitation from Orange Grove Lodge, No. 97, to attend the Seventh Annual Ball of the Lodge, to be given Thanksgiving eve, Nov. 27th. It would afford us great pleasure to be present to join in the grand march and "trip the light fantastic," but as that is out of the question, we can only express the hope that the occasion will be financially and felicitously a success.

We have on our table a little book of 32 pages, containing a large number of questions and answers relating to running engines, on the Union Pacific Railroad. The purpose of the book seems to be to help the men of the cab to master the machine in their charge under all circumstances, and especially the firemen who seek promotion. It is issued by G. W. Cushing, Esq., Superintendent of Motive Power on the Union Pacific, and we presume is in the hands of every fireman on the road.

THE 18th Session of the International Cigar Makers' Union was held in Tammany Hall, New York, beginning Sept. 16th, 1889. There were present 127 delegates, and the deliberations were of unusual interest. The membership of the Union is given at over 19,000. The receipts of the Union for the fiscal year ending August 31st, was \$47,172.55, and the disbursements \$46,606.34. The statistics in regard to the production of cigars are interesting, showing for the year ending June, 1889, 3,867,385,460 cigars were made, and for four years, 1886 to 1889, both inclusive, a grand total of 15,011,316,031 cigars have been manufactured in the United States.

A SERIOUS wreck occurred on the Vandalia Line last month as the night express, eastward bound, was leaving Terre Haute. The engine, in passing over a split switch, was derailed and badly wrecked. Engineer Ed. Miller, at one time a member of Vigo Lodge, No. 16, was seriously injured, although at this writing he is resting comfortably and his early recovery is confidently expected. Fireman Wm. W. Woods, a member of No. 16, escaped more fortunately, only a few bruises and a general shaking up being sustained. We congratulate the boys upon their narrow escape. The wonder is, after viewing the wreck, that they were not killed outright. The cause of the derailment is unknown.

F. P. McDonald.

It will be gratifying to the Brotherhood, throughout its entire jurisdiction to know, that Bro. F. P. McDonald, of Joseph, Lodge, No. 43, Chairman of the Board of Grand Trustees, has been appointed to the responsible and fairly lucrative position of State Grain Inspector, for the District of St. Joseph, Mo. The appointment of Bro. McDonald, which has been confirmed by the State Board of Railroad and Warehouse Commissioners, was due to the active interest taken by the Railroad Commissioners, viz.: Hon. William G. Downing, Hon. T. J. Hennessey, of the B. of L. E. and Col. John B. Breathitt, all broad gauged men, whose quick comprehension of Bro. McDonald's eminent qualifications for the responsible position, while creditable in the highest degree to their sagacity, was a well deserved compliment and honor to Bro. McDonald and whose qualifications for the position are first class.

Bro. McDonald is still President of the St. Joseph Trade Assembly, which is composed of five representatives each, of nearly all the labor organizations in that flourishing city.

Bro. McDonald took possession of his office November 1st, which is Room No. 19, Chamber of Commerce Building, St. Joseph, Mo., and his army of friends not only congratulate him upon his appointment, but wish him a prosperous, official career.

THE meeting of the Joint Board of Adjustment of the M. K. & T. System, which was held in Sedalia, Missouri, commencing September 23d, was in all regards harmonious and resulted in advancing the pay of the firemen on the System, and the opinion is expressed that their wages are better than on any other system in the country, unless it be on some mountain roads. The officers of the system were most kindly disposed, and ready to do the fair thing, as nearly every proposition of the Board of Adjustment was agreed to. It is now in order for the Firemen on the system, to do their best to promote every interest of the road. Generous liberality on the part of the management of the road, should be responded to by unflinching fidelity.

HERCULES LODGE, No. 63, of Danville, Ill., has recently been called to mourn the death of its Secretary, Bro. Wm. Corbitt, and also the death of Emmet Boyer, a young fireman who, had he been spared a few weeks longer, would have been a member of the mystic Brotherhood. The death of young Boyer occurred under circumstances of unusual sadness. He was sitting on his seat box with his arm resting on the arm rest of the cab window, when he was struck by a piece of timber on a passing train with such violence that he died in a few hours. He was a young man of twenty years and universally beloved, and his untimely death is lamented not only by parents and relatives, but by a large circle of sorrowing friends.

Congratulatory.

The members of our Brotherhood throughout its entire jurisdiction, will be delighted to know that a great joy has come to the home of Bro. F. P. Sargent and his devoted wife, to brighten and bless it, all will hope, for many, many years. The source of this great felicity is little baby Mabel, whom cruel fate deprived of its parents, but who still, we believe, had a guardian angel to watch over its destiny, and provide for it a home, where the tenderest care and solicitude, destined to ripen into affection as beautiful as was ever vouchsafed to childhood, will be its great and good fortune. Little Mabel as pretty and as sprightly as could be wished, already gives evidence of a loving disposition, and though but nine months old, can say "Papa" in tones as sweet as the notes of an Aeolian harp. In some measure we think little Mabel is the child of the Brotherhood, and all the membership will devoutly wish the little stranger health and long life. Little Mabel was born on Christmas, and the anniversary of its birth will always be ushered in with chiming bells and joyous festivities, reminding its foster parents of the beautiful words of the Master, "Suffer little children to come unto me and forbid them not, for of such is the Kingdom of Heaven."

In the *Journal of United Labor*, the official organ of the Knights of Labor published at Philadelphia, there appears in the issues of October 10th and 17th, an article captioned "The Story of a Crime." It is not completed in the issues named, but when finished, will constitute such an arraignment and *expose* of Austin Corbin's reign in Pennsylvania, as will make prudent men stand aghast at the monstrous iniquities this soulless villain has been permitted to perpetrate, in defiance of all law, human and divine. "The Story of a Crime," is the story of a thousand infamies, agglomerated into one huge crime, such as never before blackened the pages of American history. It should have the widest possible reading by the workmen of the country, every one of whom should swear, by voice and vote to wipe out the foul stigma.

ON Monday, September 16, Grand Master Sargent met with the Joint Board of Adjustment of the Missouri Pacific system. There were good reports of the condition of members, and of peaceful relations existing between the company and the men. The Joint Board of Adjustment is composed of excellent men, who seek assiduously to do right and are successful in that regard to a satisfactory degree. Bro. C. A. Dillon deserves great credit for his prudence and zeal, and his reflection to the position of chairman was a well deserved compliment. The agreement made one year ago is giving general satisfaction, but a few changes were made which will be of great benefit to the men. The outlook on the M. P., is cheering.

An Enterprising Lodge.

Byram Lodge, No. 271, Port Morris, N. J., has a right, we think, to be boastful. The town, or village of Port Morris, has, all told, about 100 families, and still, at the late fair and festival, the Lodge cleared \$110, and the gross receipts amounted to \$170, or an average of nearly \$2.00 for each family. That's business. The Lodge, having experienced, no little trouble in finding a hall in which to hold its meetings, concluded to build one of its own, to cost from \$1,500 to \$2,000. The proposition is to issue shares, at from \$15.00 to \$20.00 and then go forward with the building, wise provisions being made for such shareholders as will require more time than others. Nor is this all that Byram Lodge proposes to do in the way of new departures. The purpose is to establish a coöperative store. One hundred families ought to sustain such a store and make it profitable, at any rate, the movement on the part of Byram Lodge, will attract attention, and may result largely beneficial in localities where there are more than a hundred families.

THE *Rocky Mountain News*, of September 23d, contains an account of a lamentable wreck which occurred September 22d. In this wreck Bro. Hannon lost his life, his death having horrifying features, which it were impossible to describe. Not having an opportunity to jump he was thrown to the engineer's side of the cab, and by the time he had raised himself it seemed as though the tender, which was half uplifted, relaxed its terrible pressure, and found an opening into which the unfortunate man fell to be pinned to the ground. The flues were disjointed and the hot water was pouring down into the fire box, running from there to the ground, passing over the helpless form of Hannon. The edge of the fire box rested on Hannon's stomach. He cried in pain and as the engine tottered begged to be released. The locomotive then pitched forward and slightly down the embankment, dragging him with it, covered by a pile of living coals and hot machinery. Bro. George Rogers was also seriously injured, and Hannon died a few hours subsequent to the accident, and was buried September 24th. Bros. Hannon and Rogers were both members of Rocky Mountain Lodge, No. 77.

WE have a letter from a member of Hercules Lodge, No. 63, of Danville, Ill., giving an account of the death of Bro. Corbett, Secretary of the Lodge, which occurred on September 10th, of typhoid fever. Bro. Corbett was a valuable and highly esteemed member of Hercules Lodge, a devoted Brotherhood man and a faithful and efficient official. As a fireman he was faithful and studious, giving entire satisfaction to the management of the C. & E. I. R. R. In his life he was a model of propriety, and his death is universally lamented. He was buried with Brotherhood honors, and his Lodge in honor of his memory passed appropriate resolutions of sorrow.

Sam Dixon, of Baraboo.

A subscriber asks the favor of putting the following in print, owing to his admiration of Sam Dixon, of Baraboo, and the profound sympathy his hairless head always awakens:

Dear Sam, I'm told,
It's awful cold
In Baraboo, and 'round there;
And so my friend,
I herewith send,
Ten pounds of wooly bear hair.
So make a wig
Almost as big—
Well, never mind about that,
But make a bit,
In the way of fit,
And then put on your old hat;
Then I'll swear
You will have hair
In winter, summer, spring and fall,
On your intellectual billiard ball.

Simeon Wig.

[At first we were disposed to reject the foregoing doggerel, but it is presented with such christian sympathy for the good of Sam, that we concluded to let her go Gallagher.—ED. MAGAZINE.]

DURING the month of September Grand Master Sargent made an extended tour East in the interest of the Brotherhood, visiting Lodges at Buffalo, N. Y.; Watertown, N. Y.; Wilkesbarre, Pa.; Green Island, N. Y.; Whitehall, N. Y.; Rutland, Vt.; Bellows Falls, Vt.; Lyndonville, Vt.; St. Albans, Vt.; Montreal, Canada, and Concord, N. H. At Whitehall, where the brakemen and the firemen have flourishing Lodges, a union meeting was held and an enjoyable time had. At Troy, N. Y., the boys gave Bro. Sargent a banquet, and when the train started that bore him away from the town, there was a fusillade of torpedoes in his honor. At Lyndonville another banquet was tendered the Grand Master, and the most courteous attentions bestowed. While in Montreal Bro. Sargent was ticketed to the opera, where the music was superb and the evening was delightfully spent. At Concord, N. H., still another banquet was served, and the stay was made as enjoyable as possible. Everywhere the Lodges were in a prosperous condition and the Brotherhood animated by a purpose to accomplish still greater advancement.

SHE HAD PROMISED MOTHER.

Night and Day.

A poor little girl flower-seller one night, who was admitted to the Shelter, was asked by the matron how she had managed to maintain herself respectably in spite of her daily temptations. Her father and mother had been dead for years; she knew of no relatives, and she had no friends and no home. She burst into tears at the matron's question. "I promised mother," she said.

 NOVEMBER, 1889.

GIVEN AND TAKEN.

Smoothing soft the nestling head
Of a maiden fancy led,
Thus a grave-eyed woman said:

"Richest gifts are those we make;
Dearer than the love take
That we give for love's own sake.

"Well I know the heart's unrest;
Mine has been the common quest
To be loved, and therefore blest.

"Favors undeserved were mine;
At my feet, as on a shrine,
Love has laid its gifts divine.

"Sweet the offerings seemed, and yet
With their sweetness came regret,
And a sense of unpaid debt.

"Heart of mine unsatisfied,
Was it vanity or pride
That a deeper joy denied?

"Hands that ope but to receive
Empty close; they only live
Richly who can richly give.

"Still," she sighed, with moistening eyes,
"Love is sweet in any guise;
But its best is sacrifice!

"He who, giving, does not crave
Liketh is to Him who gave
Life itself the loved to save.

"Love that self-forgetful gives,
Sows surprise of ripened sheaves,
Late or soon its own receives."

J. G. Whittier, in Independent.

RAILROAD FEDERATION.

Commoner and Glass Worker :

What is the significance of Federation? What is the necessity of Federation? What is proposed to be accomplished by Federation? Let it be understood that Federation is not amalgamation. In Federation the federating orders do not surrender their autonomy, they give up no right which relates to their absolute independence in the management of their affairs, which does not involve the interest and welfare of the other orders included in the alliance.

Federation signifies unity and strength. It is "many in one." If it were required to demonstrate the axiomatic truth that "In unity there is strength," the history of the United States would supply every needed argument. Within the entire realm of illustration, nothing more convincing could be found.

Labor, a term I use in the place of workingmen, wage earners, bread winners, etc., is weak as compared with the power that has senselessly antagonized it; so weak as to be compelled to

accept such terms as has been offered by those who controlled it. This being incontrovertibly true, the necessity for organization on the part of labor is universally admitted by those of its friends in any sense capable of forming a rational opinion, or of arriving at an honest conclusion. Organization is opposed, not only by the enemies of labor, but by those who have controlled it in the past, and who are determined to exercise their autocratic power to debase and degrade it in the future; but also by a class of men, who having no purpose in life but to make money, would have business go forward undisturbed, totally regardless of the wrongs and injustice inflicted upon men who do the work of the world, and make progress and civilization possible. Unfortunately, there is another class opposed to the organization of workingmen, and forever in alliance with those who oppose and oppress labor interests. There are workingmen who, whatever they say to the contrary, are the slaves of the creatures who claim and assert the right to rule them and to reign over them. They are found everywhere; they have the form of men but they are not men; to use a term, they are "scabs," forever watching for opportunities to step in and accept degrading wages and conditions, when a manly workman revolts. It is because of such things that labor finds it necessary to organize for its protection.

History demonstrates very conclusively that during the past eighty years labor organizations have accomplished much in the way of resisting and overcoming the tyranny of employers. By organization the working day has been reduced from fourteen to ten hours without reducing wages. By organization, in many instances, wages have been advanced, in others maintained, and in every case prevented from going to the lowest level desired. On such points volumes could be written. But the organizations, acting separately and alone, have often been overcome and disastrously defeated; and these calamities have suggested the need of federation.

This brings the question, what is proposed by Federation?

In discussing the question I shall confine myself chiefly to the consideration of the Federation of organizations of railroad employes.

In this discussion little need be said about the antagonistic attitudes of labor and capital. From the first, every sentence uttered in that direction has been the trick of the demagogue; mountebank fusillades in the interest of disorder. Capital is the creation of labor, and to talk of war between capital and labor, finds its parallel in the assumption that the hand wars against the eye, or *vice versa*.

The trouble in the past has been between capitalists and workingmen; the former seeking to crush the latter, and this proceeding necessarily results in unrest, grievances, and often in open revolt.

I am not required to say that all capitalists

seek to reduce wages or to inflict upon workingmen degrading conditions. Fortunately such is not the case. There are many men controlling capital who recognize in workingmen their best friends. They pay liberally and promptly, and as a general proposition, they are successful in their business. There are others, not animated by the American idea, who would in the briefest time possible, reduce labor in the United States to the Chinese level. They would inaugurate a system of peon slavery, in many regards more odious and degrading than that of African slavery in the South before the Sumpter gun was fired that aroused a nation to arms.

To prove that there are men controlling railroad enterprises who are animated by a purpose to degrade workingmen, it is only required to mention the name of Austin Corbin. He may be said to represent the entire breed of pestilential railroad magnates, and the army of subordinate officials, who, clothed in a "little brief authority," use it to exile peace and create pandemonium. They would introduce into the United States the caste curse of India. They employ spotters and Pinkertons; they are advocates of the "blacklist" infamy; they are the implacable foes of labor organizations; they would crush out a workingman's manhood, his independence, his self-respect, all things that distinguish him from a serf; all things that make a man boastful of American citizenship, and this is done, it is claimed, in the interest of railroads, to enable them to achieve success.

Workingmen take an opposite view of the situation. They organize for the purpose of overcoming degrading conditions, to maintain their rights prerogatives; to maintain the inalienable rights of life, liberty and the pursuit of happiness. But organization alone does not in every case, and scarcely in any case, meet the exigencies. Workingmen favor Federation, which is the climax of organization, all the organizations acting as one organization when the interests of all are involved.

It should be understood, and in the near future is likely to be comprehended, that all railroad employes have mutual interests; and particularly is this true in the transportation service. Is it worth while to discuss this proposition? Is it not so self evident that argument and illustration weaken, rather than strengthen the declaration?

Suppose a wrong is done switchmen; a wrong so grievous as to be unendurable, and, as a result, switchmen strike. Does it not follow that the interests of brakemen, firemen, conductors and engineers are involved? He who does not see that the interests of all trainmen are included, is incapable of distinguishing between an axlom and an ax handle. It is because of this mutual interest that Federation is demanded, and it is eventually to be permanently established, and include all of the organizations of railroad employes. So far, three great orders of railroad employes, firemen, brakemen and switchmen, have federated. A Supreme Council has been

established. I shall not attempt to outline the method of procedure, in cases where the Supreme Council acts, further than to say, that in case of trouble, a strike cannot occur without the approval of the Supreme Council, nor until every means known to a peaceful solution of the difficulties involved have been exhausted, first by the order complaining, and then by the Supreme Council. There is to be no hot-headed work. Impetuous proceedings are to be tabooed. The demand is, reason, circumspection and patience. If a strike is to take place, it will occur only when every expedient known to honest diplomacy is exhausted. If then a strike is authorized, every man will abandon his employment.

It will be seen by this, I think, that Federation proposes peaceful measures; that its power will be exerted to prevent extreme measures, and that it does not favor violence and turbulence; and this, I believe, will eventually be the conclusion of all railroad officials.

In the discussion of Federation, there is a broader field which invites the writer, and those who are giving the labor questions intelligent consideration. If time permitted, I should gladly enter it to indicate, as best I might, the drift of opinion in the ranks of labor. There is going forward a mighty mustering of the mind forces of the times; and workingmen are neither supine nor silent. The labor question, in all its phases, is up for debate, and the labor press of the country will forever keep it in its advanced position, until right, truth and justice, one and indivisible, prevail. The labor question is in Congress, in the Legislature, in the bank and in the counting-room. It is in the school and in the college. It is in the lawyer's office and the clergyman's study. It is discussed on 'change. It is everywhere a topic. And last, but not least, the labor question is being discussed wherever a plow turns a furrow, wherever an anvil rings, wherever a shuttle clicks, a spindle whirls or an engine exerts its mighty power. It is discussed in cab and round-house, and it will not down.

In this majestic debate, those who can read the signs of the times, must, we feel satisfied, conclude that the Federation of the hosts of labor will secure blessings, as redeeming and exalting, as were ever vouchsafed to man, since the morning stars sang together.

EUGENE V. DEBS,
Grand Secretary Brotherhood of Railroad Firemen.

CIRCUMSTANTIAL EVIDENCE.

Time.

"Uncle Ben, your son was fooling around my hen-coop last night, and I came very near catching him. He had his hand on a chicken, but let it go when he heard me."

"Boss, did yer say he had a hand on a chicken an' den let it go?"

"I did."

"Den 'twarn't none ob my son. Dat nigger war'n't none ob my raising."

THE QUEEN OF DREAMS.

All day, where clouds flock through the sky,
The Queen of Dreams abides on high.

She has peaks of snow and caverns of fire,
Glittering castles and dungeons dire,

And giants and dwarfs and monsters rare
Follow her beck through the lucid air,

Amid the wavering train she dwells,
Where the wind forever sinks and swells.

Singing its marvels, low or loud,
Through opal vapor or sunset cloud.

But at night when shadows on earth lie deep
And weary mortals are wrapped in sleep,

The wild Queen comes with her mystic power,
To cast her spell on the perished hour.

She bids a faded moonlight fall
Yellow once more on hut or hall,

And conjures back their flickle grace
To the grief bowed form and the wrinkled face.

Hope that was starved and love that was slain
In her wondrous presence revive again.

Earth smiles in her tender, unknown light,
And this woful waste is a garden bright,

Where the heavy burdens of wrong and care
By a soft enchantment grows light as air.

Restless and sad, for her mercy pray
Those spirits who pine for a vanished day;

The livelong night to the darksome skies
Like smoke from fire their prayers arise:

"O come, sweet Queen, and bring us again
The delight of old and the old-time pain;

"For no gift to our hungering souls can seem
One-half so fair as a fleeting dream;

"And this desolate life holds naught so dear
As the echo of bygone hope and fear."

Zoe Dana Underhill in Harper's Weekly.

THE READING RAILROAD.

The Reading Railroad has been at considerable pains to inform the newspapers that it has discovered an organizer working among its employes, and that as a result a number of them are to be discharged. Superintendent Bonzano expressed himself as sorry to have to discharge any one, but that it was the determination of the company to have no Knights of Labor in its employ. It is true that the men on the Reading Railroad are desirous of becoming members of labor organizations again, and many of them will do so regardless of the threats of Mr. Bonzano. If there was no other reason the tyranny of the railroad company would drive men to bind themselves together for protection if not for betterment of their condition. But then again there is a latent spirit of freedom in every man's breast that will force rebellion against the brutal system now in operation on the Reading Railroad. The condition of the employes of the company at Reading and other points on the road is even worse than it is in Philadelphia.

We expect to be able to lay before our readers in a week or two the abject condition of many

of the employes of the Reading corporation, and then our readers will have an opportunity of forming an idea of how far chattel slavery can go in the great State of Pennsylvania. The people of this Commonwealth can well remember the prosperity of the Reading Company and the people all along its lines at the same time. Its downfall commenced with the departure from business methods in going outside of its legitimate calling as a common carrier. Then followed the reduction of wages of its employes to meet the losses of its suicidal policy. Then followed bloodshed and crime in the mining region, directly attributable to the action of the company's officials. The more recent history of the corporation is too well known to need repetition here.—*The Union, Philadelphia.*

ADDITIONS TO SOLOMON.**Good Housekeeping.**

Vinegar helps digestion, but a sour temper ruins it.

Wait till after dinner before you fall out with the cook.

How beautiful are the feet of her that brings in a good dinner.

There may be too much of a good thing—of salt in the soup, for instance.

It is vain for you to rise early if the kitchen chimney will not draw.

If cleanliness is next to godliness, then neatness is side by side with piety.

The foolish man maketh haste to remove his winter flannels, and pneumonia taketh their place.

When a man disagrees with you it is often best to leave him alone. The same is true of rich food.

It is better to lock the stable door after the horse is stolen than not to lock it at all. It may save the cow.

Seest thou a man rosy in his cheek, joyful in spirit and amiable in all his ways? He hath taken a good cook to wife.

If you borrow, you must lend; therefore whoever you are unwilling that men should borrow of you, borrow not of them.

Don't put out your furnace fire till the sun is ready to take its place. A ton of coal at \$6.50 is cheaper than a doctor's bill of \$65.

Flattery is foolishness, and whosoever is deceived thereby is not wise; nevertheless the discreet woman may use a little of it for her husband's sake.

Elbow grease has an honorable name, and is not to be derided; nevertheless the clothes-wringer and the carpet-sweeper are very popular in this country.

AUSTIN CORBIN'S OCTUPUS.**TRICKS AND SCHEMES OF AN IMPUDENT CRIMINAL**

**How Strikes are Engineered by Stock Wreckers—
The Methods of Chattel Slavery Improved on by
Capitalism—Pennsylvania's Lying Legend.**

In the *Journal* of July 18, 1889, under the heading "Hats Off to Austin Corbin," I used the following language:

A strike was necessary, and in 1887 the men were warned that Austin Corbin and a few others (the number I am not certain of) wanted to control the stock of the Reading, and that they would in all probability be driven to a strike if not careful. The strike came. It was carefully and deliberately planned by the officials of the Reading Company. When the proper time arrived Austin Corbin gave his consent and it was allowed to proceed. The rest is known to the public, or will be the time we get through with him.

One of the deluded and swindled stockholders of the Reading Company has written me, stating that I should be arrested for libeling the hard-worked men who are engaged in stealing the earnings of the Reading Company. He says he believes my letter has done injury to the company's interests. If the stockholders of the Reading Company were endowed with ordinary common sense they would have seen long ago that they were being robbed. If the business men of the Schuylkill region were not blind they would have taken steps long ago to deprive the Reading Company of the power to drive trade and business away from their doors. In the same letter in which I am taken to task my correspondent says that the coal companies of the Lackawanna region are violating the Constitution as well as the Reading, and he wants me to attack them instead of the latter. I am well aware that the coal-carrying and mining companies of the Lackawanna region are violating the Constitution, but they are not following it up by announcing that they own the bodies and souls of the men whom they employ. They have not as yet forbidden men to live according to their own ideas; and if the recent actions of the Reading officials are allowed to go unpunished there is no knowing to what lengths all of the others will ultimately go. If the Reading is made to obey the law the same rule which enforces obedience on their part will compel the rest to live up to the Constitution of the State.

As a sample of the kind of treatment the workmen on the Reading receive I quote from the *Philadelphia Inquirer* the following:

A man was killed on the Reading Railroad yesterday while in performance of his duty under the direct orders of his foreman. It is reported that the foreman knew he was sending the man and his companions into a situation of almost certain death, which could be easily averted by waiting a little longer. If this is true it is a case of manslaughter. The Coroner of Montgomery County should make rigid investigation of the case.

People will wonder why a man should deliberately send his fellows into the jaws of death; they will wonder why men with their eyes open

walked into such a death-trap. The reason is plain: The workmen on the Philadelphia and Reading Railroad are slaves—abject, fear-stricken slaves. They are beings upon whom depend wives and children, and, as a consequence, they are terrorized and brow-beaten into doing anything the boss tells them for fear they will lose their miserable situations and be thrown out on the streets to be blacklisted and boycotted wherever they seek for employment. They are enslaved because they have not been as watchful of their own interests as the Reading "Devil Fish" has of its interests. In old time slavery days the owner would not risk the lives of his slaves for they cost from \$300 to \$1,200 apiece, and a death among them would entail a loss on the trafficker in human flesh. The situation is different now. It is far better adapted to the liking of the slave-owner, for he has absolute control of his slaves, and he is not required to pay for them when they enter his service; he gets them for little or nothing; he pays them scarce enough to live on and not enough to allow them to get so fat as to become "sassy" on; he don't care how many legs or arms they lose, for such things don't hurt him a bit, and he don't have to pay for legs or arms. When a foreman drives some of the slaves to their death he grieves not, neither does he worry about filling their place. There are lots more coming over in Corbin's ships. In the eyes of the Reading officials that foreman was justified, provided the property, the other property, the property which cost money to purchase, of the company was not injured.

In August, 1887, the employes of the Reading Company were very well organized; they were gaining concessions and were in a fair way to secure a reasonable share of their rights. They became feverish and listened to false gods. They had occasion to hold a meeting at Tamaqua that month, and had the subject of a strike under consideration. I was asked to attend the meeting, but was told that I could not come as General Master Workman, merely as a spectator, for they were not assembling as Knights of Labor, but merely as employes of the Reading Company. I wrote them a long letter and warned them against striking, told them the condition of the Order, the feeling which pervaded the membership against strikes, or rather against supporting strikes, and explained to them the dangers ahead. I also warned them that I had received positive information that the officials of the Reading Company were dickering with members of their organization for the purpose of bringing on a strike, so that Austin Corbin and five or six others would be enabled to scare off the stockholders and buy in the stock of the company. Straw after straw was piled on the back of the camel, and at last the load became heavy and the strike came on. At the time it took place I was dangerously ill, and an uncharitable remark made by one of those who urged on the strike causes me to think that had I been around the

strike might have been delayed. Said he: "The old four-eyed — of a — is dying now, according to the papers, and he won't be around to prevent us from gaining our rights." I was not around, and raised neither hand nor voice in that struggle. I so often had it thrown in my face that if I had not interfered with the stock-yard strike the men would have won everything they contended for that I determined to let them win the Reading strike. The world knows how they won it. Victory was not within the bounds of possibility at that time, for they went into the strike just when Austin Corbin's company got ready, and had all of the men engaged known what I told their committee, there would have been no strike. I may be asked why I did not say this publicly before, or during the time the men were out on strike. They were on strike for three weeks before I heard a word about it, and to speak then and tell what I had warned the men against would give the red-handed fellows a chance to accuse me of working against the men again, as they did on every occasion when the men were told by me to face stern, unyielding truths, instead of heeding the advice of short sighted hot-heads. To speak since that time would have served no good purpose; and now that we are prepared to publish a true story in the coming issues of the *Journal*—a story that will bear me out in what I told the men—I think the time has arrived to speak and warn the people of Pennsylvania that it is high time to take an interest in public affairs. The Reading octopus must be shorn of its tentacles, and other corporations and monopolies brought under legal restraint, or this State will witness a revolution, for men will not sit down, under a free government, and be trampled upon with impunity. We are guaranteed better treatment by law and Constitution. Those who should enforce the law and command all persons, corporations and things in the State to respect the Constitution should act for the people. If they do not, then the people must act for themselves; and history, which will be repeated, tells us that they do not go about it in a very gentle way when once aroused. Such actions as those of the Reading Company are well calculated to bring on a revolution.

The coat of arms of Pennsylvania bears the legend: "Liberty, Virtue and Independence." No more glaring lie was ever emblazoned upon the shield of thief or highwayman. Liberty! there is none where men are told to stay indoors at night; that they will be discharged if they are seen going through certain doors or talking to certain men. Virtue! there is none in a corporation that overrides the laws, and the Constitution of the Commonwealth; there is none in public functionaries who sit supinely down and allow Austin Corbin's "Devil Fish" to close the doors of merchants and business men, dictate terms to manufacturers and operators, when coal, iron and other freights are delayed or mislaid according to the whim of the Reading manipulators. Virtue! in a Legislature that will

allow the Constitution to be scoffed at and damned in their presence? Independence! in the people of the grand old Commonwealth that prides itself on being the Keystone of the arch of States, and who are not independent enough to make a thieving corporation pay its taxes, its just debts, or obey the laws which it has made? Virtue! Liberty! and Independence! Hell is full of such, but Pennsylvania should be possessed of more of the genuine articles than to allow this state of affairs to continue. It may be said that I am too severe, and that I stretch the truth. Read what they have to say themselves, and then charge me with misrepresentation. In next week's *Journal* will be commenced a new story of labor. It was written by a Committee of the United States Congress, which was appointed during the strike of 1887 and 1888 on the Reading. It is the report of the committee, and shows that every charge made by me is true. This story will be continued from week to week until all is told and the whole of it before our readers. I would request that our members, particularly Pennsylvanians, preserve the files of the *Journal* with this story for future reference. Do not forget while reading the "Tollers of Babylon" to read the "Story of a Crime; or, the Slave Tollers of Pennsylvania," which will be commenced in next week's *Journal*.

T. V. POWDERLY.

A LOVING HUSBAND.

Fliegende Blätter.

"Charlotte, my dear, how is it I find you weeping? Have you had bad news from your husband?" "Oh! worse than that! My Arthur writes me from Karlsbad, that he would die with ardent longing for me, were it not that he could gaze affectionately at my picture and cover it with a thousand kisses every day." "That is very nice of him; and pray is it that you are crying for? I would give anything to have such a poetic and tenderly loving husband as you have." "Ah! yes, my Arthur is very poetical; but let me tell you, that just to try him, I slipped my mother's photo into his traveling bag instead of my own before he started."

Catarrh, Catarrhal Deafness, Hay Fever.—A New Home Treatment.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result of this discovery is that a simple remedy has been formulated whereby catarrh, catarrhal deafness and hay fever are permanently cured in from one to three simple applications made at home by the patient once in two weeks.

N. B.—This treatment is not a snuff or an ointment; both have been discarded by reputable physicians as injurious. A pamphlet explaining this new treatment is sent on receipt of ten cents by A. H. Dixon & Son, 337 and 339 West King street, Toronto, Canada.—*Christian Advocate*.

Sufferers from Catarrhal troubles should carefully read the above.

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

NOVEMBER, 1889.

Assessment Notice for November.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., November 1, 1889. }

ASSESSMENT No. 7, \$2 00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members who were entitled all the benefits of the Order, viz:

CLAIM No. 127. John R. Harmon, of Potomac Lodge, No. 7, died of Typhoid Fever, July 27th, 1889.

CLAIM No. 128. E. Q. Guthrie, of J. B. Maynard Lodge, No. 183, died from injuries received in a Railroad Accident, August 5th, 1889.

CLAIM No. 129. Robert Martin, of Northern Light Lodge, No. 127, died of Consumption, August 5th, 1889.

CLAIM No. 130. Orley Wheeler, of Connecting Link Lodge, No. 25, died of Hemorrhage of the Bowels, August 10th, 1889.

CLAIM No. 131. G. W. McCutchin of Chehaw Lodge, No. 89, died of Typhoid Fever, August 13th, 1889.

CLAIM No. 132. Thomas Lancy, of Evening Star Lodge, No. 112, died of Dysentery, August 14th, 1889.

CLAIM No. 133. Henry L. Lewis, of Buffalo Lodge, No. 12, died of Consumption, August 17th, 1889.

CLAIM No. 134. James Halloran, of St. Clair Lodge, No. 116, died from injuries received in a Railroad Accident, August 18th, 1889.

CLAIM No. 135. T. S. Ogle, of Clark-Kimball Lodge, No. 113, died of Typhoid Fever, August 19th, 1889.

CLAIM No. 136. David Casey, of Anchor Lodge, No. 54, died of Heart Disease, August 21st, 1889.

CLAIM No. 137. Lee Hawkins, of Frisco Lodge, No. 51, was killed in a Railroad Accident, August 24th, 1889.

CLAIM No. 138. Geo. A. Edwards, of Pottawatomie Lodge, No. 223, died of Acute Parenchymatous Nephritis, August 25th, 1889.

CLAIM No. 139. Howard Tyler, of Welcome Lodge, No. 72, died of Typho-Malarial Fever, August 26th, 1889.

CLAIM No. 140. Wm. Corbet, of Hercules Lodge, No. 63, died of Typhoid Fever, September 8th, 1889.

CLAIM No. 141. Wm. Holt, of Guide Lodge, No. 125, died of consumption, September 11th, 1889.

CLAIM No. 142. E. C. Stephenson, of Ohio River Lodge, No. 294, was killed in Railroad Accident, September 18th, 1889.

CLAIM No. 143. Joseph Hannon, of Rocky Mountain Lodge, No. 77, was killed in a Railroad Collision, September 21st, 1889.

CLAIM No. 144. Morris Hurley, of Kansas City Lodge, No. 74, died of Malarial Fever, September 24th, 1889.

CLAIM No. 145. Barney Bigler, of Royal Gorge Lodge No. 59, died of Typhoid Fever, September 28th, 1889.

CLAIM No. 146. Frank G. Moore, of Prairie Lodge, No. 170, died from injuries received by a Runaway Team, September 29th, 1889.

CLAIM No. 147. James Rooney, of Northwestern Lodge, No. 82, died of Consumption, October 1st, 1889.

An Assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and the Receiver is required to forward said amount for each member, whose name appears on the rolls November 1, 1889, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than November 20th, 1889. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 51 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Acknowledgments.

RUTLAND, September 16, 1889.

To the Brotherhood of Locomotive Firemen:

SIRS:—I return my sincere thanks for the draft for fifteen hundred dollars which I received through the hands of C. F. Underhill, of Marble City Lodge. With the best wishes for the prosperity of your Order, I am

Very gratefully yours,

MRS. F. O. SMITH.

HINTON, W. VA., Oct. 1, 1889.

To Hinton Lodge, No. 236, B. of L. F.:

With heartfelt gratitude I desire to return my sincere thanks to your honored Order for the prompt payment of the (\$1500) fifteen hundred dollars insurance due me on the death of my devoted son, C. E. Tyler, who met his terrible and unwarned fate while in the faithful discharge of his duty, at Ona, on the C. & O. Railroad, July the 4th, 1889. I also wish to thank the noble Order, of which Lodge my son was a member, for their many and thoughtful attentions to our family in our great bereavement. Wishing your Order may flourish, and that God's blessings may attend each of you is the prayer of the bereaved mother.

MRS. S. H. TYLER.

KELLOGG, IA., September 30, 1889.

To the Officers and Members of the B. of L. F.:

GENTLEMEN:—It is with sincere thanks that I acknowledge the receipt of a draft for \$1,500, the full amount due me on the policy of my late husband, Charles M. Jackson. I also wish to thank the members of Confidence Lodge, No. 102, for their kindness to me in my bereavement.

MRS. ANNA JACKSON.

EAST ALBANY, N. Y., Sept. 11, 1889.

Eugene V. Debs, G. S. and T. Brotherhood of Locomotive Firemen, Terre Haute, Ind.:

DEAR SIR:—I have received through our local Brotherhood of Firemen a draft for \$1,500 on the policy held by my son, John Grant Purves. Please accept my thanks for the prompt and business like manner in which the claim was adjusted.

Yours very truly,

MRS. T. B. PURVES.

ANOKA, September 5, 1889.

Mr. Rowland Armsdel, Receiver of Pine City Lodge, No. 81, B. of L. F.:

DEAR SIR:—Yours of the 2nd inst. was duly received, also the money from the Lodge, for which I wish to return my sincere thanks to Pine City Lodge, No. 81. Also for their kindness during my husband's sickness and death. Hoping the Lodge and all its members may ever prosper, I remain

Yours respectfully,

MRS. H. F. STEARNS.

ST. JOSEPH, Mo., September 18, 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIR:—I desire to return thanks for the payment of a draft for \$1,500 the full amount due me on the policy of my late husband, James Dorsey. I also wish to thank the members of St. Joseph Lodge, No. 43, for their kindness and the many favors shown me in my late bereavement. May heaven's blessings fall on the members of your noble Order, is the wish of

MRS. FLORENCE DORSEY.

ST. LOUIS, September 17 1889.

To the Officers and Members of Peace Lodge, No. 100, B. of L. F.:

GENTLEMEN:—With much gratitude I beg to acknowledge the receipt of a draft for \$1,500, the same being the amount of the insurance policy held by my son, William Diemert, in your noble Order, and who was accidentally killed near Main and Levee in this city June 10th, last, by his engine turning over. With best wishes for the advancement and future prospects of the Brotherhood, believe me,

Respectfully,

MRS. A. DIEMERT.

NEW LONDON, Wis., Sept. 25, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

DEAR SIR:—It is with feelings of heartfelt gratitude that I hereby acknowledge the receipt of \$1,500, the amount of insurance due me on the death of my son, Albert E. Kapernick, of Arbitration Lodge, No. 520. He joined the B. of L. F. September 1888, and died April 25th, 1889, of typhoid fever. Wishing the noble Brotherhood a prosperous future,

I remain yours truly,

MRS. E. KAPERNICK.

BUFFALO, N. Y., Sept. 9, 1889.

To the Members of Buffalo Lodge, No. 12, B. of L. F.

GENTLEMEN:—I desire to return my most sincere thanks for your kindness in my troubles. May heaven's blessing rest upon you all who so kindly cared for my husband during the last sad rites of bearing his remains to their final resting place. I have no words to express the gratitude I feel for your noble Order. May God bless you all is the wish of

MRS. HENRY L. LEWIS.

HARVARD, ILL., October 10, 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIR:—I wish to express the gratitude myself and children feel for the kindness and aid rendered us through the sickness and death of my husband by your noble Order, and especially to the members of Alpha Lodge, No. 26, who were so thoughtful for my husband's comfort through his sickness, and for their cheering words and many acts of kindness, and for the beautiful flowers furnished at his funeral. Also accept thanks for prompt payment of fifteen hundred dollars, his insurance. May heaven bless your noble Order, and as the "links" are broken, from time to time, may they at last be united in one "chain" around the Father's throne above, is the prayer of my heart.

We remain respectfully,

MRS. N. E. GOODNOUGH AND CHILDREN.

WEISSPORT, PA., October 1, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Trials come in a thousand different forms, while none but those to whose lot it has fallen can tell how acute the pang to the wife to see the delight of her eyes, the husband of her youth, snatched away by death. This has fallen to my lot. My dear husband, Geo. B. Knecht was removed from my side by the grim hand of death in the twinkling of an eye. I stood here a widow, with two small children looking to me for support and protection, and but for a God sent blessing which was near at hand, I could not have kept the wolf from the door. I now desire to give my heartfelt thanks to you all for the brotherly kindness, love and honor shown to me in memory of my dear husband who was one of your faithful members and a true Christian. I always honored the Brotherhood, but I never could fully realize the true brotherly love that exists among you until since my bitter sorrow. God alone knows how I appreciated all your kindness to me. He will surely reward you all. I thank the brothers of our Lodge, No. 384, for the beautiful floral wreath presented by them. I also return my thanks for the draft of \$1,500 I received through the hands of Alvin Rex and A. T. Henry. And may you each and all find such friends in your hour of need as you have been to me, is my earnest prayer.

I am your sincere friend,

MRS. POLLY KNECHT.

Unknown Addresses.

JOSEPH BROOKS.—A locomotive engineer of Danville, Quebec, was running an engine at Corpus Christi, Texas, in March, 1888. Any one knowing his whereabouts will confer a favor by giving information to Wm. Burrage, of Rat Portage, Canada.

JAMES COSTELLO.—In April, 1881, was running an engine on the Denver & Rio Grande Railroad. His father, who is at the National Military Home in Ohio, has not heard from him since the above date. Any one having information of the man's whereabouts will do an act of great kindness by sending the same to John Costello, at the National Military Home in Ohio.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER, }
TERRE HAUTE, IND., October 1, 1889. }

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund, for the month ending September 30, 1889:

WITH
RUBBER FEET AND HANDS.

Fig. 1.

tent jud; shave commend-
ed the rubber foot and hand
for their remarkable advan-
tages.

Awarded the highest prizes
at every competitive exhibi-
tion.

Endorsed and purchased
by the U. S. Government.
A treatise of 400 pages with
200 illustrations and copy-
right formula, SENT FREE.

Fig. 1 is from an instantaneous pho-
tograph of a man ascending a ladder;
he has two artificial legs substituting
his natural ones, which were crushed
by a railroad accident and amputated.
Fig. 2 exposes his stumps. With his
rubber feet he can ascend or descend
a ladder, and balance himself on the
rungs. He can walk and mingle with
persons without betraying his loss: In
fact, he is restored to his former self
for all practical purposes.

With the old methods of complicated
awkle-joints these results could
not be so thoroughly attained.

Over 9000 in practical use, scattered
in all parts of the world. Many of
these have been supplied without pre-
senting themselves to us, simply by
sending measurements on a copyright
formula which any one can easily fill
out. Eminent surgeons and compe-

HAY FEVER

CATARRHAL

DEAFNESS

A NEW TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result of this discovery is that a simple remedy has been discovered which permanently cures the most aggravated cases of these distressing diseases by a few simple applications made (two weeks apart) by the patient at home. A pamphlet explaining this new treatment is sent free by A. H. DIXON & SON, 337 and 339 West King Street, Toronto, Canada.

Lodges of the B. of L. F. wishing

Castner & Curran, General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,800,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Special Announcement to R. R. Firemen!

The results of sales the past year by railroad boys acting as agents for

THE BEST *POLISH* IN THE WORLD.

**BAKER'S
TRIPOLINE,**

Having been so satisfactory, we will for the balance of this year, ending Jan. 15th, next

—GIVE FIVE PRIZES:—

Viz:—1st Prize, 150 lbs. Tripoline, or a Watch of Equal Value.
2d " 125 " " " " "
3d " 100 " " " " "
4th " 75 " " " " "
5th " 50 " " " " "

Price same as last year, viz: \$2.40 per dozen for 1-lb. boxes. In lots of one-half gross, \$13.00. Lots of one gross, \$25.00.

3 lb. Pails 60 cents each, or \$6.50 per dozen; 5 lb. Pails \$1 00 each, or \$10.00 per dozen.

Cash must always accompany orders to avoid delays and mistakes.

ADDRESS,

**The Matchless Metal Polish Co.,
88 Market St., Chicago.**

N. B.—We cannot accept but one agent in same locality.

Correct account of sales of each fireman will be kept and award made and announced in next February number of Magazine.

HOSPITAL REMEDIES

THE Favorite Prescriptions of the Brightest Medical Minds in the world, as used by them in the Hospitals of London, Paris, Berlin and Vienna.

**ONE
MEDICINE
FOR ONE
DISEASE.**

No. 1—Cures Catarrh, Hay Fever, Ross Cold, Catarrhal Deafness.
No. 2—Coughs, Colds, Bronchitis, Asthma, Consumption. A Peerless Remedy.
No. 3—Rheumatism, Gout.
No. 4—Liver & Kidneys, Dyspepsia, Indigestion, Constipation, Brights Disease.
No. 5—Fever and Ague, Dumb Ague, Malaria, Neuralgia.
No. 6—Female Weakness, Irregularities, A Golden Remedy.
No. 7—A Perfect Tonic, which gives Health, Form and Fullness, Clear Complexion, Good Blood and lots of it.
No. 8—Nervous Debility, an incomparable remedy.

RELIABLE AGENTS WANTED.

Every bottle guaranteed to cure its special disease if CURABLE and to give permanent relief ALWAYS. Descriptive Circulars sent free on application. HOSPITAL REMEDY COMPANY, Toronto, Canada.

Health is Wealth

DR. E. C. WEST'S NERVE AND BRAIN TREATMENT, a guaranteed specific for Hysteria, Dizziness, Convulsions, Fits, Nervous Neuralgia, Headache, Nervous Prostration caused by the use of alcohol or tobacco, Wakefulness, Mental Depression, Softening of the Brain resulting in insanity and leading to misery, decay and death, Premature Old Age, Barrenness, Loss of Power in either sex, Involuntary Losses and Seminalorrhea caused by over-exertion of the brain, self abuse or over-indulgence. Each box contains one month's treatment. \$1.00 a box, or six boxes for \$5.00, sent by mail prepaid on receipt of price.

WE GUARANTEE SIX BOXES

To cure any case. With each order received by us for six boxes, accompanied with \$5.00, we will send the purchaser our written guarantee to refund the money if the treatment does not effect a cure. Guarantees issued only by

JAMES SOMES, Druggist, Sole Agent,
Cor Sixth and Ohio Sts., Terre Haute, Ind.

ABOVE ALL THE THREE T. T. T. TRUTH, TEMPERANCE, TRIAL. THE BROTHERHOOD MEDICAL CO.

of Chicago Ill., "a Joint Stock Organization of Railroad Engineers," proprietors of

Dimmick's Kidney and Bladder Cure

Are placing with all retail druggists who desire, the above named invaluable and thoroughly tested remedy, on a guarantee of merit and success in all cases which are reasonably possible. In all difficulties of the circulatory system and urinary organs, proceeding from the non-performance of proper functions of LIVER and KIDNEYS, such as Pains in the Back, Cold Hands and Feet, Female Difficulties of delicate nature, Children that roll their Beds, or adults who are obliged to leave the beds many times during the night, Early Signs of Rheumatism, Paralysis, or General Depression—excepting in habitual use of Intoxicants—Bright's Disease, Consumption, Softening of Brain, Stone in Bladder, that has passed the period of crushing. Any one so troubled should secure one package from their druggist and use before the incurable stage is reached.

THE druggist of whom procured is authorized to guarantee the merits in all reliable cases, "except as above," refunding the money when the remedy fails, when taken as directed and used is given to the habits of life recommended and described on the large bottle. Dose is small, consequently needs to be taken continuously, commencing with five drops, increasing each dose one drop three times a day, before meals, until some unpleasantness is felt, then take the dose which did not disturb, continuing one week, then it again to increase, and so on each week taking the maximum dose as determined by test.

NOTHING better for old people in decline of life and reducing circulation, or for those who are traveling or engaged in railroad employment, exposed to sudden changes of temperature tending to derange the circulation.

In every severe and sudden cold Dimmick's Kidney and Bladder Cure will be found reliable and beneficial, and should be taken at once in the largest dose without disturbing the head, stomach or bowels.

The Brotherhood Medical Company are ambitious to establish the fact, that parties may be engaged in manufacturing, selling or pre-scribing proprietary remedies and so conduct and represent their calling as to compromise on principles of business or conscience. No misrepresentation made. We fail sooner than intentionally depart from truth and honor. We have abundance of reliable and original testimonials, which are true, that the use of Dimmick's Kidney and Bladder Cure has more than satisfied the expectations of many. Responsible contracts in writing made with all who order one dozen, the conditions of which are confidential and conduce early to promote their interests in trade with no possible chance of loss. Advertising matter sent "free of expense" to all who desire who have the remedy on sale. If any person is too old or remote to call on druggist or at our office, and will advise us by mail, we will give the case special attention, and reach them personally or by correspondence. Formula given to any reliable and trustworthy person who takes the trouble to enquire, showing clearly that there is no harm in using to a child.

Price \$1.00 per package, two bottles in our cartoon. The small one is for convenience in using, especially for railroad men on their trips, saving the inconvenience of carrying a large bottle when on the road, at work, or traveling. Correspondence solicited and promptly noticed by

RAILROAD Patent Square Ventilated Dinner Pail.

BEST PAIL MADE,

We have many testimonials like the following:

WHEELING, W. VA., August 19, 1889.

Reardon & Ennis:

I received my Dinner Pail some three months ago, and have given it a good trial. I have carried it in a tank-box, where it is cool, and I have carried it on the engine, where it is very hot; it keeps the victuals nice and fresh, and I could not get another I would not take Five Dollars for the one I have. I cannot recommend your pail too highly to Railroadmen who want victuals that are fresh and

healthy to eat.

Yours truly,

HARRY J. DRUMMOND, B. & O. R. R.

Size of No 2 Pail is 9 1/4 in. long by 5 1/4 in. wide by 9 1/4 in. high, when locked up.

To introduce these Pails, until further notice we will deliver one No. 2 Ventilated Pail, boxed and expressage paid, at any express point in the United States on receipt of P. O. Order for one dollar and fifty cents. Try one.

LEATHER JACKETS.

ENGINEERS, FIREMEN, SWITCHMEN AND OTHERS,

All over the country, have adopted our Flannel-lined LEATHER JACKETS as the most comfortable and serviceable working garments for winter wear.

Send breast measure and length of sleeve for measurement.

These jackets are made of oil-tanned skins, impervious to wind or water.

One leather jacket will outwear two overcoats. We are the largest manufacturers of this class of goods in the United States.

G. W. SIMMONS & Co., "Oak Hall," Boston, Mass.

THE BURLINGTON STRIKE:

A concise history, giving a vivid picture of it and its paralyzing effect. The official effort to obtain substitutes; characters of those obtained. Pictures of wrecks caused by incompetency. Why do men organize? Defiance of organized labor. Treatment of the employes by the Burlington officials, leading to the strike of 1888. Strike of 1862. Committee of 1873. Pay cut, and classification established 1876, action of committee on same. Strike of 1877; promises made. Committee of 1883, broken up by discharge of part of it. Contract of 1886; violation of it. Committee of 1888, Engineers and Firemen, and the strike to a finish. Investigation by the Illinois and Iowa R. R. Commissioners, of the men employed. The dynamite conspiracy, and the Pinkerton evidence that was made to convict. Closing with a vivid portrait of 47 year's life on a locomotive—memoir of C. H. Frisbie, one of the oldest engineers in the United States. Every laboring man should have it. Agents wanted.

EUGENE V. DEBS, . . . *Editor and Manager.*

DECEMBER, 1889.

FAREWELL TO 1889.

Farewell!—a word that hath been and must be,
A sound that makes us linger—yet, farewell.

Byron.

Life hath as many farewells
As it hath sunny hours,
And over some are scattered thorns,
And over others, flowers.

Mrs. L. P. Smith.

We beg our readers to believe, that in writing a farewell to 1889, we do not intend to drill for brine. We are not, at this writing, in a sentimental mood. We are disposed to speak kindly of 1889, though he is not asking for a certificate of character at our hands. The old year, now on his last legs, as years go, has been about an average. Vital statistics will show, we conclude, that there have been more births than deaths, and that the primal injunction, "Multiply and replenish the earth," has been obeyed more sacredly than any other command the Bible records, bearing eloquent testimony that marriage is not a failure.

Speaking of deaths, prompts us to say, that during 1889 the Brotherhood has said farewell to about one hundred and sixty of its members. Some of them died at home, surrounded by affectionate friends; some of them were suddenly summoned while at the post of duty, and went down to death crushed and mangled. There was a thought of home, of wife and children, of parents, brothers and sisters, and a farewell—then death. In this regard, 1889 has not been specially distinguished from other years since the iron track was laid and the iron steeds startled the civilized world and wrought such changes in human affairs as defied the wealth of hyperbole. And here, may we not mingle some words of cheer with the sad notes of the funeral dirge? The Firemen's Brotherhood cannot turn aside the shaft of death; it cannot interpose when disease wastes a brother's frame, or fate decrees that life shall be yielded up in a wreck. But what of the Brotherhood's record for 1889, when death had done its work? We are not artists, our office is not a studio, equipped with easel, brush and pencil, but were we a Raphael, a Rembrandt or Vandyck, we could emblazon upon canvas no picture more worthy of admiration than that of our Brotherhood, pouring its treasures into the laps of mourners, a scene enacted one hundred and sixty times during the year 1889. Could we paint the scene, the

Brotherhood would appear upon the canvas, scattering flowers in the pathway of sorrow, whose generous deeds, dried the fountains of tears, dispelled gloom, and enthroned hope—an incarnation of benignity and of courage, who, unawed by the flight of time, bids farewell to the years as they go by, while those who behold its growth and majesty, view it

"As some tall cliff that lifts its awful form,
Swell from the vale, and midway leaves the storm,
Though round its breast the rolling clouds are spread,
Eternal sunshine settles on its head."

In contemplating the departure of 1889, we acknowledge no special regrets. We have mourned with those who have mourned, and rejoiced with those who have rejoiced. We think of years as a convenient subdivision of time, though really indivisible. We are in favor of all the subdivisions, from seconds to years. We like the hour, the day, and the month. We are glad that their boundaries are fixed, because, were it left to caprice, it would be difficult to fix wages, and in many instances, the "pay-car" and the "pay day," would be like the visits of angels, few, and far between.

The question which the close of 1889 suggests, is: How stands the Brotherhood of Locomotive Firemen, as compared with former years? The membership may be less in numbers, and more widely distributed, and there may be those who, in discussing the fact, may think unkindly of 1889, and charge that for the Brotherhood he brought no fruitful season. Such conclusion is superficial. It is not philosophical. We make no objection to numbers. We would have every locomotive fireman in the land, of integrity, of high ambition, of courage, of fidelity to obligation, of independence, whose self-respect bears him up and on, no matter how dazzling the temptations designed to swerve him from principle and to make him drift with the treacherous currents; all others are a hindrance and an unmitigated curse to any Brotherhood. The strength of the Brotherhood centers in the fidelity of its members; 1889 is gone, and except by death, he has taken no good fireman from our ranks. Some have gone, but they were not *veterans*—as sailors, in a storm,

when the winds and the waves threatened disaster, their lack of courage would have been demoralizing—as soldiers, in a battle, their cowardice would have won for them the unutterable scorn of their comrades. When Sherman made his historic march to the sea, he took with him only *picked* men, men who knew no such word as "fear," men who would do to be put on guard in dark nights, men of Spartan courage, who preferred death to dishonor, and could say,
"Fate made me what I am—may make me nothing—
But either that or nothing must I be;
I will not live degraded."

Never in the history of the Brotherhood has it been stronger than now, when it says farewell to 1889, and the old year, if he has the roll in his pocket and will read it to the crowned immortals who have laid down the scoop for the harp, and laid aside blouse and overalls for seraph robes, he will hear the shout, "They are good men and true, who by word and deed will win for themselves and for the grand Brotherhood imperishable glory."

Invincibility of mind forces in the Brotherhood of Locomotive Firemen was never as potent as now, when it says farewell to 1889. It comprehends the fact that to conquer ignorance is a task, if possible, more herculean than to overcome arrogance, and that the Brotherhood and all labor organizations have about as much to fear from the one as from the other. During 1889 was witnessed the federation of three Brotherhoods of railroad employes, and the old year as he takes his place in the procession of the centuries has a right to be proud and boastful that as he unfurls his banner inscribed with the wise and notable event, no other incident in the affairs of men who create the wealth of the world since Moses said to Pharaoh, "Let my people go," voices more eloquently the growth of knowledge and wisdom in the ranks of working men. There may be those who deride the movement. There is nothing unusual in that. The nineteenth century had those who laughed when Fulton laid the keel of the first steamboat and sneered when Morse asked Congress for permission to send messages over wires. When Washington and his compatriots were seeking to bind the colonies in a "more perfect union,"

there were those who ridiculed the idea. Such people are not all dead, but the laughing philosophers, the scoffing tribe, can no more stay the march of events than they can arrest ocean currents.

True, Austin Corbin and the like of him have "Russianized" the anthracite coal regions of Pennsylvania, have made the grand old "Keystone State" of Penn and Franklin a hissing and a by-word, a stench in the nostrils of freemen, a vulgar fraction of the Republic, but they have not hushed the voice of labor. Blind worshipers of the "Almighty dollar," they cannot see that in what they call a victory there is hidden the germ of a conflict that shall at last overwhelm them and their schemes in irretrievable defeat.

During all the months of 1889 we have sought to make the *LOCOMOTIVE FIREMEN'S MAGAZINE* the champion of the RIGHT, and if the old year shall choose to take a few bound volumes with him he will oblige us by showing them to friends of the toiling masses "over there" who watch with ceaseless solicitude for the consummation of federation, the adoption of the eight hour law, and everywhere throughout the land the enthronement of Justice and the recognition of the "brotherhood of man and the fatherhood of God."

What more can we say in bidding the old year farewell? Only this: as we ring out the old year we are prepared to ring in the new. Our thoughts are with the living. The living must win the battles of the future, not the dead. Is there a stronghold to be captured? the living must do it. Is there a battery to be silenced? the living must take it. Are there great truths to be enunciated and vindicated? the work is for the living. The dead live in their noble deeds and in their great works. They shall be our examples. We will emulate their courage, their fidelity, their sacrifices, and the Brotherhood, from ocean to ocean, from the frozen north to the sunny South shall be our, as it is their, monument.

WE have steel ships and steel guns, and now it is announced that we are to have steel beer-kegs—everything steel but the bung-hole.

MORTGAGED INDEBTEDNESS OF TEN WESTERN STATES.

The *Binder*, a farmers' organ, published at Marion, Ill., states that in the ten states named farms are mortgaged to the amount of \$3,422,000,000, as follows:

Ohio	\$701,000,000
Indiana	398,000,000
Illinois	620,000,000
Wisconsin	250,000,000
Michigan	350,000,000
Minnesota	175,000,000
Iowa	351,000,000
Nebraska	140,000,000
Kansas	203,000,000
Missouri	237,000,000
Total	\$3,422,000,000

The State Statistician of Ohio, in his report to the Governor, for the year 1888, denies the statement of the *Binder*, and charges that it has been manufactured to order by some descendant of Ananias, and proceeds to show that the sum total of mortgages on property in the State of Ohio instead of being \$701,000,000 is only \$330,999,205.78, a difference of \$370,000,794.22, in round numbers, say, \$371,000,000. Assuming that the statement of the *Binder* is as erroneous with regard to the mortgages of the other states named as it is shown to be in the mortgages on Ohio property, the grand sum total, instead of being \$3,422,000,000, would be \$1,791,000,000, a difference of \$1,631,000,000.

The investigation of the Ohio statistician having been exhaustive, and the error of the *Binder* having been demonstrated in a way to silence prudent controversy, the assumption is warranted that like errors were made in estimating the sum total of mortgages on the farms of other states, but, after making deductions based upon the *Binder's* errors, the remainder, \$1,791,000, is of startling proportions. In 1880, the population of the ten states named, was in round numbers, say, 17,000,000. Suppose the gain during the decade now closing has been 30 per cent.; this would give a present population of 22,000,000, and the mortgaged debt of the states would be \$81 *per capita*, and if the mortgages bear an average interest of 6 per cent., the annual tax *per capita* would be \$4.86. Bearing in mind that all taxes are paid by labor, the figures are conclusive that labor should have improved conditions to enable it to bear its burdens.

THE REST QUESTION.

There are 365 days in a year. Deduct fifty two Sundays and there remain 313 working days. We do not propose to discuss the Sunday question from any sectarian religious standpoint. We are not the advocate of Blue Laws. It does not matter in the least what views men entertain regarding the authenticity of the Bible, all intelligent men concede the wisdom of the command, "Six days shalt thou labor and do all thy work, but the seventh day is the Sabbath of the Lord thy God; in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy man servant, nor thy maid servant, nor thy cattle, nor the stranger that is within thy gates."

Boiled down, the command means rest from work, rest for the weary; weary hands and weary feet, weary brain.

The Sinai command which we have quoted has been adopted by christendom as binding, and statutes have been enacted to enforce its obedience. We are informed that the first civil enactment for the proper observance of Sunday was made by Constantine, A. D. 321, and we are told that the Council of Orleans, A. D. 338, prohibited country labor on Sunday. In the reign of James I, "certain sports and pastimes after divine service were authorized," but were violently opposed, and the sanction of the law by Charles I, was one of the causes which led to the civil war and which ended in the death of that monarch.

In discussing the Sunday question we omit worship and deal with work. Our reference is to rest rather than religion. We assert that toil without adequate rest, is a crime against man's physical and mental organisms which must ultimately be productive of degeneracy in the human species, a public calamity which no line can measure and no plummet fathom.

Those who take an interest in such questions have doubtless observed that while statutes have been enacted to enforce the observance of Sunday as a day of rest, there has always been a provision inserted by which certain kinds of labor could be performed, known as works of "charity and necessity," without incurring any penalty. The term "necessity" has finally been made

to include about everything directly or remotely concerning the public. Railroads and steamboats run on Sunday, street cars run on Sunday, livery stables do business on Sunday, postoffices are open on Sunday, and we could multiply instances of this *necessity* idea indefinitely. Men create necessities, educate the public to regard them as indispensable, and then go forward in the transaction of business under the "necessity" provision of the statute. And it is worth while to remark that those who enact such statutes profess to believe in the binding force of the Sinai command which says "thou shalt not do any work." The idea being that to keep the day "holy" was to rest—rest from toil, so that a man's mental and physical energies might recuperate. But under the necessity *dodge* thousands and tens of thousands have no day of rest; there are no Sundays for them in all their years.

Taking all things into consideration we doubt if there is a more important question now demanding discussion than that which relates to work and rest. If we investigate man physically we find him "fearfully and wonderfully made." A writer in discussing the hand and foot, says: "The twenty-seven bones in the hand and wrist, with cartilages and ligaments and phalanges of the fingers, all made just ready to knit, to sew, to build up, to pull down, to weave, to write, to plow, to pound, to wheel, to battle, to give friendly salutation. The tips of its fingers are so many telegraph offices by reason of their sensitiveness of touch. The bridges, the tunnels, the cities of the whole earth are the victories of the hand. The hands are not dumb, but often speak as distinctly as the lips. With our hands we invite, we repel, we invoke, we entreat, we wring them in grief or clap them in joy, or spread them abroad in benediction." This human hand needs rest. It can not knit and sew, build up and pull down, weave and write without rest, and he or they who deny it rest, adequate, ample rest, sin against the Maker and the possessor of the hand, sin against light and knowledge, sin against the State, society and civilization. They are committing a crime, the fruits of which will be dwarfs and deformities. The demand is rest for working hands in free America where hands hold

the ballot, and with it can accomplish reforms.

The same writer in discoursing upon the human foot says: "The twenty-six bones of the foot are the admiration of the anatomist. The arch of the foot fashioned with a grace and poise that Trajan's arch at Beneventum, or Constantine's arch at Rome, or arch of Triumph at the end of Champs Elysees could not equal. Those arches stand where they were planted, but this arch of the foot is an adjustable arch, a yielding arch, a flying arch, and ready for movements innumerable. The human foot is so fashioned as to enable man to stand upright as no other creature, and to leave the hand that would otherwise have to help in balancing the body, free for anything it chooses. The foot of the camel is fashioned for the sand, the foot of the bird is fashioned for the tree branch, the foot of the hind is fashioned for the slippery rock, the foot of the lion is fashioned to rend its prey, the foot of the horse is fashioned for the solid earth, but the foot of man is made to cross the desert, or climb the tree, or scale the cliff, or walk the earth, or go anywhere he needs to go." But the feet must have rest else their "adjustable arches" will break down and the splendid superstructure they sustain will fall. The demand is rest for the hand, rest for the feet, rest for the brain, the head, rest for the entire body, one day in seven. Let the edict go forth that greed, vulgar, degrading, mercenary greed, shall cease to dominate the world.

Political economists talk learnedly of the wealth of nations. Statisticians pile up figures showing production, imports and exports. We have glowing accounts of the march of empire, the disappearance of the wilderness, the building of cities, and the boast is that we accomplish more in a decade than was formerly achieved in a century. It is true. In the mad march and wild whirl, the eager chase to secure the "almighty dollar," rest is forgotten. The years allotted to man are "three score and ten," but under the influence of our boasted civilization millions perish before they reach the five years mile-stone, and at the thirty-third mile-post a generation has disappeared from the face of the earth—they have found

rest. In the wake of the grand army of progress (?) are poorhouses, jails and penitentiaries; asylums for the insane, the deaf and dumb and blind, full to overflowing with unfortunates, a frightful per cent of whom are the victims of a mania which disregards rest from work as an essential factor in the maintenance of that equipoise in human affairs required to secure happiness and prosperity worthy of the name.

The proposition that a man should devote eight hours to sleep is not seriously questioned, and those who have given the subject studious investigation assert that the welfare of workmen physically, mentally and socially, is best subserved if the day of twenty-four hours is divided into three equal parts, which gives eight hours for work, eight hours for study and recreation, and eight hours for sleep. It will be conceded, we think, without debate, that eight hours are absolutely required for sleep. If a man works twelve hours a day he has therefore only four hours a day for the satisfactions which leisure confers. If he enjoys more than four hours it must be taken from the eight hours required for sleep, the penalty for which is physical degeneracy. If he works ten hours a day he has six hours to devote to personal affairs, social duties, to study, intellectual equipment, to act well his part as a citizen and meet intelligently the responsibilities of citizenship. If he works eight hours a day and devotes eight hours to sleep, he has eight hours a day for home and family, books and business, and for amusement, for which every man whose mind is healthy manifests a strong desire, and which all rational and thinking men admit are required to secure mental and physical vigor.

If work begins in earnest at sixteen years of age and continues until a man is sixty years of age, forty-four years will have elapsed. We assume that he does not work on Sundays, in which event he has, during the forty-four years, six years, four months and eight days rest. If for the remaining days he works fourteen hours and sleeps eight hours he will secure in the forty-four years, in addition to his Sunday rest, two hours a day, or, for the entire period, three years, one month and twenty-nine days. If

he works twelve hours and sleeps eight hours, his week day leisure will be four hours a day, or for forty-four years, six years, three months and seven days. If he works ten hours a day and sleeps eight hours he will have each working day six hours' leisure, or, for forty-four years, nine years, five months and twenty-seven days. If he works eight hours and sleeps eight hours, his daily leisure will be eight hours, or, for forty-four years, twelve years, seven months and twenty-six days.

Tabulated, the problem appears as follows:

Working hours per day.	Sleeping hours per day.	Leisure hours per day.	Leisure secured during working days in forty-four years.	Leisure secured on Sundays during forty-four years.	Total leisure secured on Sundays and working days during forty-four years.
14	8	3 y. 1 m. 29 d.	4 y. 3 m. 20 d.	7 y. 3 m. 19 d.	
12	8	6 y. 3 m. 7 d.	4 y. 3 m. 20 d.	10 y. 9 m. 27 d.	
10	8	9 y. 5 m. 27 d.	4 y. 3 m. 20 d.	13 y. 9 m. 17 d.	
8	8	12 y. 7 m. 26 d.	4 y. 3 m. 20 d.	16 y. 11 m. 16 d.	

If the man who works on Sundays sleeps eight hours, and works the number of hours named in the table, his total leisure for the forty-four years would be as follows:

The man who works 14 hours a day would have 3 y. 8 m. 9 ds. 16 hrs.

The man who works 12 hours a day would have 6 y. 9 m. 17 ds. 16 hrs.

The man who works 10 hours a day would have 13 y. 4 m. 6 ds. 16 hrs.

The man who works 8 hours a day would have 13 y. 4 m. 6 ds. 16 hrs.

There may be those who will consult the figures and estimate the value of the time secured from toil, to devote to reading and writing, to amusements, to visiting, to personal business affairs, and to the home circle. Possibly there are those who ascertain, approximately, at least, the benefits conferred by leisure, and there are those, we conclude, who will extend their investigations still further, and arrive at the conclusion that a man who is ambitious to meet all the requirements of an American citizen, should have at least eight hours a day for rest, to equip himself for the duties and responsibilities of citizenship. If a man works on

Sundays, has no leisure—find him where you may, trace his record through life, and you will find a deformed mind or body, or both, and as you find him enjoying leisure, cessation from work, he will stand higher in scale of manhood, morally, intellectually and physically. Such is the rule, and the exceptions do not change the proposition. If a man absolutely abstains from "any work" on Sunday he will be superior to the man who works on Sunday. A proposition so self-evident that it requires no argument to establish its validity. Hence we conclude that the greater the number of hours a working man devotes to rest, to the recuperation of mental and physical energies, the better it is for him and for the State; for, say what we will, a State has no possession at all compared in value to its working men. Goldsmith's declaration that

"Ill fares the land, to hastening ills a prey,
Where wealth accumulates and men decay;
Princes and lords may flourish or may fade;
A breath can make them, as a breath has made;
But a bold peasantry, their country's pride,
When once destroyed can never be supplied,"

Is a truth everywhere accepted, and everywhere disregarded by men whose ambition is to make labor the synonym of degradation.

An exchange says, that "in the death-bed confession of Ella Schwartz, the wife of the brakeman now serving a life sentence in the Illinois penitentiary for complicity in the great Rock Island train robbery and murder of Express Messenger Kellogg Nichols. The evidence at the trial, while strongly circumstantial, was insufficient to convict the brakeman of deliberate murder, and his neck was thus saved. According to Mrs. Schwartz's confession, her husband gave her \$13,500 of the stolen money, which she concealed by rolling the bills up one at a time and packing them in cartridge shells. This money, it is alleged, was subsequently turned over to Schwartz's lawyers." It is not generally believed that Schwartz's lawyers will make a confession and hand over to the Rock Island the \$13,500, nor so much as one cartridge.

An English syndicate is endeavoring to acquire control of all the iron mines in Mexico, except those owned by Americans.

EDUCATION AS A HELP TO WORKINGMEN.

No one questions the elevating, transforming power of education. In a country and under a form of government in which caste is not recognized, where the humblest child may aspire to the highest positions in the government, the subject of education assumes an importance which it does not possess in less-favored lands. The national idea is, that all American children shall have a good "common school" education; that they shall be qualified to read, write and speak correctly the English language; that they shall understand arithmetic, geography, and at least the history of their own country. An education to this extent is the national conception of what is right and proper for all American youth, and with such acquirements, the national idea, the American idea, is that a boy is fairly equipped for the battles of life. Starting from this point the term "education" opens up a vast field, which only the favored few may enter and successfully explore. It is the college, the university education, the higher education, and in the nature of things not attainable by the masses, much of which is purely ornamental, and if secured is of no practical value. The supreme demand of the times in education, as in anything else is to take a common sense view of situations. The tendency of all "higher education" is to educate boys and girls into the belief that "work" in the common acceptation of the term is degrading; that is to say, a boy is taught directly or indirectly that a profession is more dignified than is a trade. Take an average farm boy, and send him to an agricultural college and the chances are that when he leaves, he has a contempt for the plow and the hoe. He wants to be a "professor" a doctor, a lawyer, or almost anything rather than a farmer; work on the farm has lost all attractions for him, and he enters the ranks of the learned professions and goes to swell the number of those whose ambition it is to live by their wits, by their education, rather than by work. We say the tendency is in that direction. It must be confessed, on the other hand, there are those whose mission it is to work, who are unmindful of the great advantages secured by even a

common school education, and who exhibit little ambition to improve their minds by study. Their leisure is not devoted to study, nor to the acquisition of knowledge calculated to advance them in their chosen vocation; fortunately these are in the minority. The great body of working men are studious, they are ambitious to know the reason why of things, they are thinkers, and take a practical view of affairs, and in this the signs of the times are cheering. There is much being said now a days, about technical education in England and the United States. The *London Engineer* admits the value of technical education, but is of the opinion too much has been expected of it. It says "the technical educationalist would have all taught alike, and what is worse, he would have all taught at the cost of the rate-payer. We have said a hundred times, and we repeat, that we are not opposed to the spread of technical education. But we do not attach the popular meaning to it. We would have every man carefully fitted by education for the performance of the work which he intends to do. To teach a plumber to make a joint in which there shall really be more solder than resin, is to technically educate him; to instruct a fitter so to shape and fit keys in their seats that they may not fall out or require to be wedged in with bits of tin, is to technically educate him to some purpose; but we cannot see that the plumber would make better joints because he has been taught the Binomial Theorem; nor can we see that wheels would be better keyed on their shafts because the fitter perfectly understood the chemistry of the sun." The conclusion is that at a certain period in a young man's career, he determines what calling he will pursue; suppose it be that of a locomotive fireman, what is required? Manifestly, that he shall master in every detail the locomotive. He aspires to the responsible position of engineer, he hopes to command a locomotive—hence he owes it to himself to the calling, to the public, to his employer, to be the master of his profession. Anything less than this is less than the prudent requirements of the situation.

It is well said that "there can be no better definition of the right sort of education—let

it be called technical or what you will—than that every man should be ‘carefully fitted by education for the performance of the work which he intends to do,’ and not for a hundred other things which he will never even attempt.” Preliminary to such an education, it will aid immensely for the worker to have what we have denominated a common school education. If this has not been secured, any moderately ambitious young man can obtain it. He has only to utilize his leisure hours. Books are on every hand. Teachers are numerous. All that is required is a purpose on the part of the young man; if this exist the way is straightforward, and success is certain. We see it stated that on one prominent railroad, all the men in the service of the road are required to submit to an examination before promotion. It is stated that “those applying for promotion are required to pass a satisfactory examination as to general education, and particularly as to familiarity with their duties,” and it is stated that the results are very satisfactory. There can be no doubt but that a higher standard of efficiency is to be required of railroad employes, and those who are ambitious of promotion will do well to avail themselves of every possible opportunity to make themselves proficient. Shakespeare said, “All the world’s a stage.” As truly, all the world’s a school, and he who masters all things connected with the work he has to do will find himself in the line of promotion and advancing steadily to the top round of the ladder.

THE New York *Standard* remarks that “estimating Jay Gould’s income at only \$3,000,000 a year—it is very likely more than double that sum—we find that for each of the 300 working days of the year he is in receipt of \$10,000. His son George will probably take good care of what comes to him, for he has had good training, and is now one of his father’s shrewdest lieutenants.” Ten thousand dollars a day ought to exempt Mr. J. Gould and family from sympathetic fears, and still the Vanderbilts and the Astors are in the habit of speaking dubiously of Mr. Gould’s future state.

AUSTIN CORBIN ON LABOR ORGANIZATIONS.

In the October number of the *North American Review* Austin Corbin, in his paper on “The Tyranny of Labor Organizations,” says:

With other good, bad and indifferent importations of foreign products we have found ourselves within recent years to have acquired a body of professional labor agitators, which has been largely reinforced by lazy imitators of domestic growth. These, both foreign and domestic, find it much more congenial to their idle habits and tastes to assume the role of grand knights, grand masters and walking delegates, with salaries attached and expenses paid, than to earn an honest living by earnest work, as the genuine workman gladly does.

The foregoing is Corbin’s most serious arraignment of labor organizations. It is upon this indictment that Corbin bases his appeal for sympathy while he pursues his policy of plunder, and he is permitted to give his slander wide reading in the *North American Review* for the purpose of obscuring the abominations of his rule, and just here it is worthy of remark, that while he denounces officials of labor organizations, “foreign” and “domestic,” as “professional agitators,” he employs Huns, Dagoes and the riff-raff of European slums for the purpose of degrading American workmen, by reducing wages to a point that forever confronts them with starvation; compelling them to live in hovels scarcely removed from the dens of wild beasts, and to subsist upon food that a well-bred dog would refuse.

Austin Corbin demands that there shall be no agitators or agitation of labor topics, of wage questions, throughout the anthracite coal regions. He wants stagnation, degradation, slavery. He demands that his word shall be supreme; that when he takes snuff his 35,000 serfs shall sneeze; that when he waves his scepter his army of helots shall crawl; that when he orders Bonzano, or any other caitiff in his service to give a bugle blast, his rag-tag and bob-tail peons, sunken-eyed, hollow-cheeked, skinny-fingered convicts shall fall prostrate and worship anything beneath or above the sod he may dictate. And because labor organizations, inspired by self-respect, sentiments of liberty and independence, without which life is a continuous curse, protest against such tyranny, he turns upon

them, and because he has cash, utilizes the pages of the *North American Review* to empty the vials of his wrath upon them.

Austin Corbin, whose rascality is vastly more phenomenal than his wealth, says "unagitated workmen do not pay dues," that is, are not members of labor organizations.

There is not a writer upon labor topics at all acquainted with the facts bearing directly upon wages who will deny that labor organizations have not been potent in advancing and maintaining wages. And the fact stands out as clear as a mountain peak, that where labor organizations do not exert an influence wages decline to any point an employer may demand. We state the rule and defy successful contradiction.

Corbin's statement that the "unagitated workman does not pay dues," is worthy of a little investigation. Let it be understood that the "unagitated workman" does not belong to a labor organization, but is one of Corbin's serfs.

We will assume that if labor organizations held sway in Corbin's territory, the country he has Russianized, wages would be advanced, say 25 cents a day.

We will assume if Corbin's men belonged to labor organizations their dues would amount to \$20 each a year.

We will assume that Corbin has in his employ 35,000 men.

If wages were advanced 25 cents a day for 300 working days in the year the men would be benefitted to the amount of \$2,-625,000.

If they paid dues to the amount of \$20 each, annually, the sum total of dues would be \$700,000.

Hence the net gain to the men in Corbin's employ, if they belonged to a labor organization, would be \$1,925,000.

Now, it is seen at a glance, why Corbin is opposed to labor organizations and labor agitators.

By keeping things quiet where he reigns and rules enables him annually to pocket from the earnings of his serfs \$1,925,000.

If labor organizations had sway in his domains this vast sum of money would go into the pockets of workingmen instead of into the pockets of Austin Corbin.

In this presentation of the case we have given the reasons for Austin Corbin's opposition to labor organizations.

Labor organizations touch his pocketbook, therefore his soul. He is known to be a venal villain, a cash-cursed czar, who, in the case of Judas Iscariot, would have sold Christ for less than thirty pieces of silver rather than have lost the job.

THE *Railway Age* remarks that a speed of 100 miles an hour is believed by Wm. S. Huntington to be entirely practicable, provided the necessary and expensive preparations for it in the character of both roadway and equipment are made. He proceeds to cite the principal sources of danger from fast running which now exist and which can be, to a large extent, at least, removed by sufficient expenditure of skill and money, and claims that "with proper alignment and with track and rolling stock in perfect order, there is no more danger of derailment at 100 miles an hour than at the speed now run every day on American roads." It may be that this tremendous speed will eventually become of ordinary occurrence, but at the present time the general feeling among railway men and other people is that our fast trains are fast enough, and, indeed, it is a question whether the majority of people, railway men included, would not feel a little more comfortable in their minds if the pace at which they are sometimes carried was not quite so great. Very high speed is an expensive luxury for the railways, and the public does not show any inclination to pay more for it, but on the other hand is continually calling for lower rates. And yet it is a fact that the roads which make the quickest time make the most money; they secure the travel. The present is a fast age; speed is the *sine qua non*. Men snap their fingers at disaster and death, and railroad men and ship-builders are trying to meet the demand.

A POOR man in Jersey City having stolen two suits of clothes, pleaded that he was out of work, had a sick wife, and was hard up, whereupon the owner of the goods refused to prosecute. That man should have a monument.

WHO OWNS THE COUNTRY ?

In the September *Forum* Mr. Thomas S. Shearman tells the people who owns the country. It is stated that the whole national wealth, real and personal, according to the highest estimate that anyone has ventured to make, is \$60,000,000,000. With these figures in full view, Mr. Shearman says :

Let us inquire whether there is any excessive concentration of wealth going on in the United States of America. Leaving mere clamor and unsupported assertions out of consideration on each side, let us look into facts. As lately as 1847 there was but one man in this country who was reputed to be worth more than \$5,000,000; and though some estimated his wealth at \$20,000,000, there is no good reason for believing it to have been so great. The wealth of his lineal descendants is estimated at \$250,000,000,000 or \$50,000,000 each. In 1867, in the New York Constitutional Convention, one of the most prominent delegates stated that he could name thirty men, residing in that State, whose wealth averaged \$15,000,000 each. The *St. Louis Globe* recently published a list of seventy-two persons who were worth, collectively, the whole amount of our national debt, averaging \$18,000,000 each. The wealthiest railroad manager in America, in 1865, was worth \$40,000,000, but not more. His heir died recently leaving an estate of nearly \$300,000,000; and there are several gentlemen now living who are worth over \$100,000,000 each. Within a short period a number of quiet, unobtrusive men, of no national fame, have died in Pennsylvania leaving estates of over \$20,000,000 each. Twenty living persons, in the oil business, are reported to be as rich. Forty persons could be easily named, none of them worth less than \$20,000,000, and averaging \$40,000,000 each. At the lowest reasonable estimate, there must now be more than two hundred and fifty persons whose wealth averages over \$20,000,000 each.

Mr. Shearman, exercising "extreme caution," tabulates the wealth of 24,600 persons in the United States, as follows :

200 persons at \$20,000,000	\$4,000,000,000
400 " 10,000,000	4,000,000,000
1,000 " 5,000,000	5,000,000,000
2,000 " 2,500,000	5,000,000,000
6,000 " 1,000,000	6,000,000,000
15,000 " 500,000	7,500,000,000
<hr/> 24,600	<hr/> 31,500,000,000

This gives for the 24,600 persons an average of more than a million and a quarter each; or, estimating the wealth of the country at \$60,000,000,000, it is more than 50 per cent. of the grand sum total.

But demonstrating still further who owns the country, Mr. Shearman says :

Let us test the question in another way. Eastern savings banks show an average deposit of \$365. This sum represents the extreme savings of the average thrifty workman of the East. But even estimating that 20,000,000 workers of 1889, earning an average of less than \$400 each, of whom 5,000,000 are women and children, have saved, on the average, \$300, still, their aggregate savings would not amount to \$12,000,000, or \$1,100 for each average family. Let us suppose that the 1,000,000 workers of superior class, earning an average of \$1,000 each, have saved \$3,000—a monstrous exaggeration. This would make their total

possessions \$3,000,000,000. The result would be to show that 21,000,000 persons had saved up in the whole course of their lives \$15,000,000,000, leaving \$45,000,000,000 in the possession of not more than 400,000 persons.

The repeated declaration that the profits of labor are not equitably distributed, is by the figures furnished by Mr. Shearman triumphantly vindicated. Labor creates all wealth. Every colossal fortune named by Mr. Shearman is the profits of labor diverted from its legitimate channel, and it is this unequitable distribution of the wealth which labor creates that makes the rich richer, and poor poorer, and the strides this legalized robbery has made in the United States since 1847, and more particularly since 1860, in which it is shown that 400,000 people have \$45,000,000,000 and 21,000,000 only \$15,000,000,000, tells in mournful numbers of a condition of things, which, unless changed, will, at no distant day, engulf the nation in a revolution compared with which the reign of terror in France will appear like a holiday picnic.

This consolidation of the wealth of the nation in the hands of the few, is, in the United States, a more flagrant crime than elsewhere in the world. Here it is supposed the laws are made for the benefit of all—for one as well as for another—and that all are equal before the law. It is not true. It never has been true. Under the laws as they exist the few, in ten thousand ways that are dark, are able to rob the many, and that this has been done, and that the nefarious work is still going forward, Mr. Shearman proclaims and proves.

Who is then to change the laws? Upon whom rests the responsibility of overthrowing trusts, syndicates, monopolies, and all other combinations by which the 400,000 persons have \$45,000,000,000 and 21,000,000 persons have \$15,000,000,000—or, worse still, as is shown, that 24,600 persons have \$31,500,000,000 of the \$60,000,000,000, the entire wealth of the nation? The task, herculean as it may appear, is to be performed by the workingmen of the United States. There are no other persons to execute the work. We are to have better laws, and a more just administration of laws, or the work of grinding degradation is to go forward until a social earthquake produces chaos.

PRESS AND PULPIT.

Nothing is more refreshing now-a-days than to read a sermon abounding in practical common sense views of life. The Rev. Robert McIntyre, of Chicago, pastor of Trinity M. E. Church, is an eminently level-headed man. There can be no doubt but that he has been "called" to preach. He has a mission. He catches on at the right time and in the right place. He talks sense from the start. His vision is clear. He does not "see men, as trees walking." He sees men. He sees conditions, wants and aspirations. He sees men struggling for a higher and better life. He recognizes agencies, and estimates them at their true value. The Rev. Robert McIntyre is doing a good work; and we want the readers of the *Magazine* to know how he talks, what he says, and therefore give the following report of a sermon he preached on the "press and the pulpit" as we find it in the press:

"In our present day the pulpit and the press are one, God has joined them together. I do not agree with the ministers who denounce the Sunday papers and regard them as foes, workers of iniquity. I declare that the pulpit and the newspaper are twins and should work hand in hand. I know preachers are prone to cavil at the newspapers, because they have stolen our audiences. That is an indisputable fact; they have taken our congregations from us. But I want to ask what good it will do us to shout ourselves red in the face over the matter and cry 'Stop thief,' or beg of the newspapers to please give our hearers back and cease their Sunday issues. We must learn to acknowledge the power of the press. The editor is a more powerful man than the preacher. He speaks to thousands, we to but a few hundreds. He has an advantage. He has the inspiration of a multitude of hearers. That, too, has been stolen from us—the inspiration, along with the hearers, for no man talks as well to 300 people as to 3,000 or 5,000. But I don't believe we need to surrender our congregation to the papers. I believe that if the skies snowed newspapers a foot deep they couldn't keep the people from coming out to listen to any honest man, to whom God has given the gift of eloquence, who has a message to speak to mankind. If the papers take away a minister's audience it is his own fault, and because he is a party to it. "If the congregations forsake the churches for the Sunday paper it is because the papers have what the preachers have not—the feeling of the people, the power to touch the people. The trouble with the preachers of the present time is that they are not in unison and concord with the people. The men who make newspapers are. They are a part of the people itself. But the minister of modern days is a creature almost set apart. Unlike those of the olden time, he has been trained from school days for theology, and has never earned a dollar by work in his life. He has never known what it was to walk up to a man's door and ask him for a job. When he goes out to talk with commercial men and mechanics he doesn't know what to say. He has no conception of their needs or their lives. He is a fine theorist, but as far away from the people as if he floated in the blue of the heavens instead of walking the earth.

"The newspaper is with the people; its work-

ers are among and of them. It touches every chord of life, and is the greatest power for good on earth. It is practical, not theoretic, like the minister's expressions. It is real, not a spectre, like him. Pure men, good men, holy men, are the majority of the preachers. I verily believe you could go out haphazard and select any twelve preachers in Chicago, and they would be just as good men as those who walked on earth with our Lord. But they do not draw near to the lives and the hearts of the people, and the newspaper does.

"I cannot speak against the Sunday newspaper. Myself, I do not need it now. But ten years ago, when I was a humble workman, trudging backward and forward with my dinner-pail night and morning, it was a solace, an educator, and a keeper from evil for me. It was almost the only reading and education I had then. It kept me from the card table and the beer gardens. And I know the Sunday paper does far more good than evil."

It will be seen that the Rev. McIntyre has faith in the press as an educator, and the pulpit as well. He is right. When the pulpit places itself, *en rapport* with the great body of the people, it will prove a conquering power; and when the press of the country, concludes that labor, and only labor, is the salvation of the world, and announces the fact, it too will win victories, which, in sweep, and influence for good, will make the morning stars again sing together, and the sons of God shout for joy. The good time is coming boys, and don't you forget it.

ACCORDING to Bradstreet's tables failures are increasing in the United States:

1889, 9 mos—	Failures, 8,334,	liabilities, \$101,755,518
1889, 12 "	" 7,330,	" 83,941,991

If the rate of failures is maintained for the last quarter of 1889, there will be for the year, 11,112 failures, with liabilities of \$135,714,024.

THE Louisville & Nashville Railroad Company is building a coal dock at Pensacola, for the purpose of facilitating the shipment of Alabama coal to the West Indies, which has been going forward for sometime past, and which it is expected will reach 400,000 tons annually.

An improved railroad spike has been invented, and is being used on New York railroads. Its hold upon the wood is said to be fully 75 per cent. stronger than that of the spike now generally in use.

THE price paid by an English woman for a court dress is estimated to be from \$500 to \$750—by an American from \$1,000 to \$1,500—*Exchange*.

When it comes to plumage the American bird always takes the gate-money.

RAILROAD BUILDING.

There are now in the United States, in operation not less than 147,000 miles of railroads. If we estimate the cost of these roads with equipment at \$25,000 a mile they represent a bona fide investment of \$4,915,000,000, and this amount is a close approximation to facts, but when figures are required to show what per cent. earnings are to cost we find that eight billions is nearer the mark than four billions. But such matters do not concern us at this writing, for whether the cost of building railroads in this country, in the average, be \$25,000 or \$50,000 a mile, the work is certain to go forward for many years to come. This being true, locomotive firemen have special interest in the subject, since it creates a certainty for the employment of men as firemen on all the trains.

It is laid down in the books, that for every one hundred miles, twenty locomotives are required, and as a consequence twenty locomotive firemen, and therefore, for all the mileage in the country, 29,400 firemen are constantly employed. Manifestly, there are fully one-fourth of that number of firemen, 7,350 who do extra service, working in the place of others who are from time to time off of duty, so that it is safe to assume, there are now employed in the country, not less than 37,000 locomotive firemen, and the same number of locomotive engineers. Starting from 1830 when there were but twenty-three miles of railroad in operation, the average increase annually has been 2,774 miles, but taking the last decade and the average annual increase has been 6,800

miles, and we are inclined to the opinion that within the next fifty years, the railroad mileage of the country will be double what it is at present, or 294,000 miles in A. D. 1939. The estimate will not be considered extravagant by those who will take the trouble to examine the "map of our country" and note where railroads will be required to meet the demands of inland commerce and the growth of population. From the Mississippi westward railroading is in its infancy. The South needs more railroads, the great central states are not satisfied with their present railroad facilities, and the eastern states are constantly projecting new lines. The outlook, as a matter of employment, is cheering to the locomotive fireman, his services are to be in demand while steam power moves the train, and the grand army of firemen must necessarily increase, rather than diminish, and as a consequence, firemen must be constantly advancing from the scoop to the throttle.

The question of labor-saving machinery which disturbs so many wage-workers, does not create unrest in the ranks of locomotive firemen. No machine can be devised by man's ingenuity to take the place of the locomotive fireman or locomotive engineer, their occupation is beyond the reach of inventions, and the fact is fruitful of felicities. Again, the railroad has come to stay, and hence, viewed from any point of observation, the locomotive fireman true to duty, equal to obligation, has an assurance, that whatever else may come and go, he has a sure thing in the way of work and wages.

BARGAINS.

HE PRESSED a ruby on her lips whose burning blood shone through;
Twin sapphires bound above her eyes, to match their fiery blue;
And, where her hair was parted back, an opal gem he set—
Type of her changing countenance, where all delights were met.

"Will you surrender now," he said, "the ancient grudge you keep
Untiring and unuttered, like murder in the deep?"
"I thank you for the word," she said; "your gems are fair of form,
But when did jewels bind the depths, or splendors still the storm?"

"There is no diamond in the mine, nor pearl beneath the wave,
There is no fretted coronet that soothes a princely grave,
There is nor fate nor empire in the wide infinity,
Can stand in grace and virtue with the gift you had from me."

—Julia Ward Howe.

ESSAYS

DECEMBER, 1889.

SELFISHNESS AND ITS FRUITS.

Humanity, since the creation of the world, has been prone to selfishness. It may be a consequence of the traditional curse, and a result of the struggle for existence thereby entailed on man. It may be but the outward manifestation of a savage trait inherent in the nature of the man himself. Whatever its origin, inherent or acquired, its existence is assured and the history of the world teaches that it has been the cause of wars, pillage and devastation, beyond computation. Man, through ages of progress and development, has been unable to eliminate from his nature all of his earlier propensities.

All governments, however crude, from absolute autocracy, to the most liberal democracy have been instituted to protect man from the selfishness of his neighbor. Armies, navies, courts, civil police and all the great machinery of government are but safeguards erected to protect one portion of humanity from being seized, robbed or annihilated by another portion; to protect the weak against the strong, the industrious from being robbed by the vicious and idle.

Were mankind thoroughly unselfish we would have no need of governments. Each man's conscience would be his neighbors' safeguard.

The christian religion with its grand philosophy has done no more to drive out this trait than did the teachings of Confucius or Brahma, Socrates or the Koran. It has simply changed conditions. Instead of the open pillage of the ancients, the massing of force against force, we have the sly, insidious but equally effective methods of modern civilization. Instead of a Rob Roy we have a Jay Gould; instead of a Captain Kidd we have an Austin Corbin. Instead of the barbarous hordes of Alaric, we are overrun with swarms of ignorant Huns, Bohemians and Italians led by Henry Clews & Co., New York. Instead of checking selfishness christianity but alters the conditions under which it manifests itself, the avaricious "steal the livery of heaven to serve the devil in." The same old spirit of selfishness has just as strong a hold on the human heart now as in the days when earth was young.

Since the advent of the printing press, the utilization of steam and electricity, and the introduction of rapid transit, the race has

advanced more than in all other eras of the world combined. The scattered fragments of the human family are becoming better known to each other. Oceans and continents offer no impediments to intimate association. Difference in language does not hinder communication; education is becoming more universal and diversified, and yet, "'tis true, and pity 'tis, 'tis true," the same spirit that caused Cain to shed his brother's blood, the greed that impelled Pharaoh to plunder Judea, the avarice of the Goths and Vandals are still alive and active in the man of to-day.

Pure and absolute disinterestedness in individuals is a rare commodity. To such a degree has the idea of self taken hold of the public mind in this "practical" age that the individual who shows a disposition to neglect his own interest in working for the general good, to ignore self in an honest endeavor to promote the welfare of a people or class, or who rejects offers of power and preferment as a reward for noble deeds accomplished, is considered a crank or simpleton. Few credit the motive to virtue, or think it possible for the human will to so far overcome the promptings of base desire. Few men can be content with the silent self-consciousness of having done good; they want the world to know and applaud. Fewer still are they who are satisfied with no other recompense than the consciousness of having done good. Still more infinitesimal is the number willing to admit that he who is doing good looks for no greater reward than the consciousness of having done it.

Education, training the will to hold in check the baser urgings of nature, a quickened conscience to discern a true and ineradicable line between right and wrong, justice and injustice, vice and virtue, tyranny and freedom, may raise the individual above self and inspire the heart with noble ambitions.

As governments were instituted to protect nations and individuals from spoliation and hardship, so have organizations of labor sprung up as protecting powers encircling the masses.

The concentration of wealth, the centralization of manufacturing industries, and the formation of capital into large corporations made the organization of labor for its own protection an absolute and pressing necessity. Yet both are unmixed evils, wrong in principle, and inimical to the best interests of the Republic. The birth of each was a public calamity, their tendency is to destroy the equality of the citizens and create class distinctions. Labor, however cannot be charged with the responsibility of having initiated these combines. It was driven to organize in sheer self defense, because of the changed conditions with which combina-

tions of capital had encompassed it, and to lessen in a degree that fierce competition in the struggle for existence which these conditions created. The advent of the corporation having made labor unions necessary, the formation of trusts renders the federation of labor unions of the utmost importance. Local unions may be sectionalized and beaten in detail, whereas a federation embracing all branches of industry would be almost invulnerable.

To my mind, the gravest danger the American workmen have to encounter is the unrestricted influx of ignorant foreigners from the rotting dynasties of the old world. As long as corporations are allowed to import swarms of these creatures to labor in mines, factories and public highways the corporations hold the winning hand. American workers brought into direct competition with these soulless serfs refuse to accept the degrading conditions they are willing to engage under and are crowded out. The men thus driven into idleness spread out to seek employment in other branches of industry and create a pressure all around that has a downward tendency on the rate of wages. The greater the immigration the greater the crowding and cutting of wages and the more bitter the struggle for existence. This invasion does not only threaten the stability of the wage market, it menaces the progress and perpetuity of the Republic also. If proof is needed for this assertion it can be given; at present I have no time to enter into an elaborate exposition of them; meantime I would call attention to conditions prevailing in Pennsylvania, particularly the Russianized system of the Pennsylvania & Reading Coal and Iron Co. Railroad men, of whatever degree, from the section man to the engineer inclusive, do not want to hug the flattering unction to their souls that this jam does not affect them, that the nature of their calling places them above it on a higher plane. Let me ask you what confronts you to day on the Philadelphia & Reading? What conditions led to defeat and disaster on the C., B. & Q.? Why are engineers so anxious to limit promotions to the actual numbers necessary to keep the ranks filled; is it not because they feel this pressure from underneath and endeavor to resist it? I believe so, and I further believe it the duty of true Americans regardless of origin or calling to aid in damming up this stream of immigration before it has completely inundated us from sea to sea.

To come down from "glittering generalities" to living experience, do we not find men on every side of us who are "concentrated all in self." Little souls who have cantoned out to themselves a little Goshen wherein their limited vision sees nothing live, move and have its being but their own

petty individuality. Where the big "I" overshadows contiguous objects and their mental horizon is bounded by the end of their noses. Within their circumscribed circle they declare: "We are sufficient unto ourselves and want no entangling alliances." Who, when their neighbors rose in indignant protest against oppression and robbery, turned a deaf ear and rolled a jaundiced eye to heaven in a pharisaical effervescence of piety saying: "Oh! God we thank thee that we are not like our neighbors!" But, who when harrassed by the enemy themselves called loudly for that assistance and sympathy they had invariably denied to others, yet, after their neighbors had generously responded, and the threatening cloud had spent itself and vanished, these ungrateful bigots withdraw into their seclusion and wrap the cold mantle of imperturbable and silent disdain around their heartless forms.

So be it. I would limit them to their little Goshen and let them rest undisturbed; and teach those who are capable of expansion to pursue the even tenor of their way onward and upward to grander possibilities and higher planes of development.

T. P. O'Rourke.

REMINISCENT.

Less than thirty years ago there were in the United States of America about five millions of chattel (cattle) slaves. As a general thing they were well fed, well clothed and well sheltered, and not overworked. The great mass of them were employed in forests and fields. During all the years while this condition of things existed the Declaration of Independence declared that "all men are created free and equal and are endowed with certain unalienable rights, among which are life, liberty and the pursuit of happiness," and during all the years while chattel slavery existed we pointed to our national flag as the "flag of the free." Poets were inspired as they beheld it, and exclaimed:

"Flag of the free hearts only home,
By angel hands to valor given,"

And

"Tis the star spangled banner, oh, long may it
wave!
O'er the land of the free and the home of the
brave."

Orators were never more successful in winning applause than when pointing to the starry banner, the "flag of the free" and the "flag of the brave." But it was, nevertheless, the flag of a country that held in perpetual bondage millions of human beings reduced to chattels, to be bought and sold as beasts of the fields.

Looking back forty years or less it is not

surprising that there were those who denounced and derided the flag because it waved over millions of slaves. They were denounced as blind zealots who, forgetting the victories under the flag that had made and preserved us a nation, would "unfurl" it and go forth to win emancipation under some other banner, and in 1854 the nation was startled by a poem, widely published and which created intense excitement, and from which we reproduce the following verses:

All hail the flaunting lie.
The stars grow pale and dim,
The stripes are bloody scars,
A lie, the vaunting hymn.
It shields a pirate's deck,
It binds a man in chains,
It yokes the captive's neck
And wipes the bloody stains.

Tear down the flaunting lie—
Half mast the starry flag!
Insult no sunny sky
With Hate's polluted rag,
Destroy it, ye who can,
Deep sink it in the waves;
It bears a fellow man
To groan with fellow slaves.

Enfurl the boasted lie
Till Freedom lives again,
To rule once more in truth
Among untrammelled men!
Roll up the starry sheen;
Conceal its bloody stains,
For in its folds are seen
The stamp of wrestling chains.

Be bold, ye heroes all,
Spurn, spurn, the flaunting lie.
Till peace, and truth, and love
Shall fill the bending sky,
Then floating in the air,
O'er hill, and vale, and sea,
T'will stand forever fair
The emblem of the free.

It is not required to say under what flag victories were won which forever swept away African slavery in America. All know it was the "Star spangled banner." But the question arises, is it now the flag of the free? The question arises, is there a form of slavery in the United States? The question arises, does equality exist where the starry flag symbolizes freedom? Does some one say, why ask such a question? I answer, because borne on every breeze are declarations that in some localities a form of slavery does exist. In the halls of Congress and of Legislatures, and in books and papers we are told of a "labor market," where labor is bought and sold as any other "commodity." The press teems with declarations that under the influence of corporations, trusts, syndicates, monopolies and pools, clouds are looming up in the distance black as a raven's wing, and that a storm is brewing which means the enslavement of the masses or a struggle for freedom such as never before shrouded the world in gloom or made angels weep, and these things are going forward under the old flag.

Is the picture overdrawn? A Congressional committee says Austin Corbin and his confederates have "Russianized" the anthracite coal regions of Pennsylvania. What is it to Russianize a country? What does "Russianized" mean? To Russianize a country, or any section of a country, is to strike liberty and independence dead. A Russianized country is one where liberty does not exist. It may not be chattel slavery. The Russian serfs are no longer bought and sold, but circumstances make them serfs still. The Chinese coolie may not be a chattel, but he is, nevertheless, a slave.

The proposition that labor creates all wealth is well understood; it is axiomatic. In all times past the struggle has been to capture this wealth. In the midst of plenty labor has been clothed in rags, poorly fed and often starved, and made to inhabit shelters that are unfit for beasts. Those who did not labor, having secured the lion's share of the wealth, have used the power wealth confers to degrade the laborer, and as he learned to subsist upon less and less the fortunes of the favored few increased in proportion. This proceeding is now in full operation in the United States of America under the

"Flag of the free heart's only home."

But the schoolmaster has been abroad; books have multiplied; dormant minds have been aroused; the mind forces of the masses are being marshaled and labor is organizing. Happy will it be for America if the vandal march of the money power can be arrested before millions of men impoverished and enraged, shall gaze upon our flag and cry

"Tear down the flaunting lie!"

while they unfurl the red flag of anarchy and repeat with added horror the darkest chapter in the world's history.

B. I. Z.

For the Magazine:

GOOD AND BETTER.

A father sat by the chimney post,
On a winter's day, enjoying a roast.
By his side a maiden young and fair,
A girl with a wealth of golden hair;
And she teased the father, stern and cold,
With a question of duty, trite and old;
"Say, father, what shall a maiden do
When a man of merit comes to woo?
And, father, what of this pain in my breast!
Married or single—which is the best?"

Then the sire of the maiden young and fair,
The girl with the wealth of golden hair,
He answers as ever do fathers cold,
To the question of duty trite and old:
"She who weddeth keeps God's letter;
She who weddeth not, doeth better."
Then meekly answered the maiden fair,
The girl with the wealth of golden hair,
"I will keep the sense of the holy letter,
Content to do WELL without doing BETTER."

Mrs. Mattie Eubank.

MILAN, TENN.

Mechanical

Letters and Papers pertaining to Locomotive running, firing and management and other topics of interest to locomotive engineers and firemen are solicited for this department.

Correspondents are required in all cases to give their real names, not for publication necessarily, but as a guarantee of good faith.

Communications should be plainly written on one side of the paper only, and as brief as possible. No matter should be introduced for illustration or otherwise that does not have a bearing, directly or remotely upon topics of a mechanical character.

Contributions to this departments should reach the Editor not later than the eighth day of each month to insure publication in the next ensuing number, and should be addressed to

MECHANICAL DEPARTMENT,

Locomotive Firemen's Magazine,

TERRE HAUTE IND.

DECEMBER, 1889.

Review of November Magazine.

The advance sheets of the November *Magazine* are at hand, and with your permission I will answer the direct question

MEASURING "How to measure the corners
CORNERS LEFT put to me by Martin Lorton,
OUTSIDE OF a square outside a circle." I
CIRCLES. presume, of course, that he
alludes to a circle having the
same diameter as the sides of the square are
in length. There are several ways in which
these odd-shaped corners can be measured,
but probably the easiest way to do it is to
divide each corner into two equal pieces,
thus forming eight pieces in all, and each of
the pieces having the same shape and size.
Below please find a square $2\frac{1}{2}$ inches on each

side, with a circle of $2\frac{1}{2}$ inches drawn within it. At the corner marked A I have marked the piece 1 for measurement, and show that by dividing each corner we will have eight equal pieces, so that having obtained the size of one we need only multiply by eight to get the area of all the corners left outside of the circle. The piece 1 has a right-angled triangle at the end nearest the corner, and its area is found by multiplying the length of its two right-angle sides, B and C together, and taking one-half of the product as the result. The piece between the line C and the center of top D is not a true triangle, as the circle line does not run direct from the point E to D, but encroaches on the angle. To get the size of this piece, a number of measurements must be taken in the direction of the lines from the side of the square to the circle. These measurements must be taken at equal distances apart; (the more of them the more exact will be the measurement) the sums of these measures are taken and then divided by the number of measures, thus obtaining a general average for the whole distance, which is then multiplied by the distance from the line C to the point D. The final result added to the area of the triangle first found, and then multiplied by 8 will give the area of all the pieces.

HORSEPOWER Mr. L. A. Wilson, who has
IN several articles in the November
ENGINE. *Magazine*, signs himself our
friend, and as such we welcome
him, even if he is not a B. of L. E. nor B. of L. F. man, but belongs to the army of M. D.'s who are ever ready to lend a helping hand to poor humanity. Mr. Wilson goes for me for quoting Cunningham's short rule for calculating horsepower, and wondering whether it were true, and how the result was as approximately correct as it appeared to be in comparison with other much longer rules. It did not enter into my mind to doubt that there was a certain quantity of power developed, and that it was possible to make calculations to determine the amount, when the size of piston, length of stroke and their number, and the pressure on the piston are given. Dr. Wilson says "that I will be a good deal older before I know that said rule is correct." I have tested Cunningham's rule with others and find it is correct in the sizes given, but could not understand or explain how the simple multiplication of the diameter by the stroke, (with an assumed pressure of 100 pounds and a speed of 100 revolutions per minute) and the division of the product by 4 should give the approximate horsepower. (On taking a cylinder 20 inches in diameter by 24 inch stroke, with an assumed pressure and speed of 100 pounds, Cunningham's rule falls a little short of the longer rules, but still its simplicity commends itself, for by Cunn-

ham's rule it takes only eleven figures to do the sum, while the other methods take over fifty figures. But it seems that Grimshaw's and all other rules, as laid down by the "philosophies" of the past, are not satisfactory to the "Doctor," and he goes on to make distinctions between gross, net and actual horsepower. I would respectfully suggest that the amount of power developed by an engine, whether it be expended in overcoming friction or doing effective work, is the gross, or actual power, while the net horsepower is the amount of power that is really available for *useful work*. Therefore, I would agree, that actual and gross mean the same thing in the sense in which the words are used by Grimshaw and "Philadelphian." The "Doctor" then says he does not believe that "Philadelphian" can get a maximum pressure of 80 pounds when the boiler pressure is 120. Diagrams of recent tests made go to prove that the maximum, or the highest pressure delivered to the piston from the boiler (with the throttle well opened so as to allow a free flow to the steam) does not fall more than from fifteen to twenty pounds below boiler pressure. The diagrams above alluded to show that with a boiler pressure of 142, 139, 131, 122 and 130 pounds, the maximum piston pressure was 121, 121, 114, 103 and 116 pounds. "Philadelphian" was wrong in calculating the horsepower with the maximum pressure as a factor, for in the diagrams above alluded to, the mean effective or average pressure was only 54, 48, 54, 42 and 47 pounds, owing, of course, to the point at which steam was cut off. In calculating the horsepower, the average, or mean effective pressure should be used, and is used by Grimshaw, and is correct. But the "Doctor" says the rules are not satisfactory to him, "because they *suppose* they have so much pressure when my *suppose* is they don't have it," and quotes Mr. Church as saying that "engine builders had *agreed* to call it 40 pounds." Doctor Wilson finds fault with the words "supposed" and "agreed," yet he also uses the words "*my suppose is they don't have it,*" and gives us not the slightest reason for supposing so. The average steam pressure on a piston is not a matter of supposition any more than the temperature of a fever patient in the hands of an experienced physician, for appliances are at hand which will just as readily indicate one as the other, and leave nothing open to guesswork; hence I can not see on what grounds the "Doctor" hopes to prove that "they don't have it." Of course we shall be pleased to have information on points which have not been explained by these steam experts, but hope that the "Doctor" will back them up with facts which can not be controverted.

The "Doctor" then finds fault with the accepted standard of 33,000 foot-pounds per

minute as defining a horsepower. While it is true that 33,000 foot-pounds is rather more than the best horse could furnish, it must be admitted that it would be a great deal easier to compute horsepower by the standard 33,000, than to go through the "Doctor's" formula of supposing a horse to travel two and one-half miles per hour, or 220 feet per minute, and to pull 150 pounds, which later, he claims should be the proper factor. No one will doubt that 220 feet by 150 pounds constitute 33,000 foot-pounds, and equals a horsepower, but as the "Doctor" aims to conform to the old standard, and only has a different way of expressing it, I am afraid that the "old horse" will not yet dwindle into a "Shetland." While we all would like to understand all about the subject of steam, I dare to express a hope that the "Doctor" will never "get through with that subject" if there is not "enough of steam to blow the whistle" to be left over, because we should hate to be "stuck for steam on the road," and no other motive power is sufficiently advanced and developed to take the place of steam.

TRACTION. Dr. Wilson also submits some questions on traction which he would like to have answered. I do not believe there is a car weighing 30,000 pounds and having a load of 40,000 pounds on it, which would start under the action of gravity alone on a grade of 1 foot in 293, as Dr. Wilson puts it. Some cars might keep moving if once started, but hardly any would start from a state of rest.

In answer to No. 1, I will say that it has been found by experiments with Dinagraph cars run with express trains, that a train weighing 250 tons required a pull of 12,000 pounds to start it, while it only took a pull of 3,000 pounds to keep it going and to get it into a speed of fifty miles per hour at the fifth mile. The "Doctor's" thirty-five ton car would thus need 1,680 pounds to start it, while 420 pounds would keep it moving and accelerate its speed up to 50 miles per hour, but the "Doctor" does not wish to go so fast, so, according to tables which can only claim to be approximately correct because of the widely different conditions of cars and track, we find that the train resistance at a speed of five miles per hour is put at 6.1 pounds per ton on a level track, this would be 213½ pounds for the "Doctor's" thirty-five ton car, but if we reduce speed to two and a half miles it would probably require only 110 pounds to keep the car moving. It is self evident that a weight of 110 pounds quietly hung on the pulley rope would have no effect on starting that car, and that it would probably take four times that weight to overcome the inertia of the mass.

2d. As it ever takes an equal power to perform a certain amount of work, so a car

started by gravity or by a weight over a pulley, must receive the same amount of power to start it.

3d. The train resistance is placed at 6.1 on a level, and at about 12.7 on a grade of eighteen feet to the mile with a speed of five miles. It therefore seems to take more than twice the weight to start and keep a car moving up an incline of eighteen feet to the mile than it does on the level.

4th. As before stated, a force of one-fourth as much as that which starts it, will be more than enough to keep it moving at two and a half miles per hour.

To sum up the whole matter, the resistance due to a grade of eighteen feet to the mile is slightly greater than the amount of power required to move the car on a level, hence a car should start on an eighteen foot grade, but friction of journals will probably take up all the spare power, and the car will stand still, and thus in fact cut off further calculations on the subject.

I hope the "Doctor" will let us hear from him again, but beg him not to altogether knock steam out before we have a good substitute.

Vulcan.

Pumps vs. Injectors.

The last decade has brought about a great change in the water supply of locomotives, or rather, in the machinery used to force the water into the boiler. Pumps seemed to be in universal use to supply the boilers on the road, most all engines however being furnished with small injectors, for use when laid up in the house or in switches, but many of these were unreliable, and would not work except by a series of coaxing and trials, which made a person who had much work with them, feel very tired and long for a rest. The change at last came, and a number of improved Mack's injectors were introduced, but while their advent was hailed with joy by some, many of the "old timers" still adhered to their first love, and said, "Give me a good pump." On being asked for the reason of their preference they would assert, that their engines would steam better with the pump than with the injector. Upon investigation it was found that they generally used the injector to its full capacity, thus throwing more water than was needed, and reducing steam pressure. Whenever the engineer used the water-ran in a proper manner, there seemed to be no difficulty in obtaining steam, when the injector was used, if they would steam at all with the pump. Instances have been observed, where engineers tried to regulate the amount of water by the steam-valve of the injector. That this is an error any one carefully observing the working of an injector can demonstrate for himself for to insure steady work in an injector, the

amount of water and steam commingled, must be in proportion to each other, for instance, if an injector is at work smoothly and the admission of water is decreased from any cause, steam which cannot find its proper volume of water, will escape at the overflow, and again, if the flow of water be increased, water will appear at the overflow, and an increased admission of steam will be needed to "take up" the surplus water. Even some of the most prejudiced engineers have been convinced by months of work with them, that injectors are better than pumps, especially so, since so many of the Monitor injectors have been introduced. In one respect only does it appear that a well adjusted pump has any advantage over an injector, and this is that a pump will throw a given quantity of water with every stroke. Now, if this quantity of water is sufficient to furnish the cylinders the requisite steam for its revolution, an equilibrium is preserved, the supply equals the demand. In practice, however, it was difficult to find a locomotive so adjusted, or if so adjusted under some speeds, she would not keep the adjustment when driven faster or slower. This same difficulty, however, also occurs with some of the Mack injectors in heavy freight service. While at certain speeds these Macks will keep up the supply, at other, faster speeds, they will not. For instance: Let me take a heavy train up a six mile grade of about sixty feet to the mile, in twenty-four minutes. The injector has to be used to its full capacity, and I may have a flutter in the top gauge, but if I run it in twenty minutes or less I will not have near as much water, even if the throttle and reverse lever have occupied the same positions as in the first instance. The reason why is simple; an injector will throw a given quantity of water in a given time, and if the time between stations is not long enough, as a result, the boiler will not have received its supply. If it were possible to pull the heavy train alluded to up this six-mile grade in ten minutes, even with the throttle and reverse lever in the same position as at first, we would find that the injector having had only one-half its usual time, had failed to put in a sufficient supply for safety. I have made these comparisons and jotted down these thoughts from some recent experiences with a Mack injector, and hope they may serve to point a lesson to some, who are bothered with injectors not fully adequate to supply the demands of the engine under all circumstances. In order to secure a safe supply of water at times, I have been obliged to reduce speed in order to give the injector a little longer time to work, and thus fill up the boiler.

The Pullman Palace Car Co. is so crowded with business that it has been compelled during the past month to decline contracts for 2,000 cars.

Instruction Car.

MR. EDITOR:—After a long absence I once more come in sight of the station and, with a blast of the whistle to announce my coming, make preparation to stop in time for the December *Magazine*.

My theme in this instance is a new one to me, and I write of something of which, a month ago, I was in total ignorance.

The Westinghouse Instruction Car, No. 1, in its tour of the west and southwest, tarried for a period of twenty days on this, the G., C. & Santa Fé Railway for the purpose of enlightening the employés of this system on that generally poorly understood appliance, the Westinghouse automatic air brake.

Prof. W. J. Hartman and his two assistants worked diligently during the entire stay at this point, and seemed to take great pleasure in explaining all points of interest and doubt, soliciting inquiry from all on points not thoroughly understood, and giving such lucid explanation and comprehensive descriptions that none could fail to profit thereby.

And now, before proceeding farther, it might be well to announce to the readers of this department that Prof. Hartman is no stranger to us, but that he once mingled with us in the dear old Mechanical Department, but under his guise, we know him not, but I have his permission to introduce him as he is, to the readers and I am somewhat inclined to think that some of those who were engaged with him in a little controversy on the subject of air-brakes and air-pumps, will be not a little taken back at the remembrance of their temerity in discussing the point in question.

Prof. Hartman is none other than "Poly—" the abbreviation of Polytechnic, for at the time of his correspondence Mr. Hartman was connected with a polytechnic school, which position he held for upwards of two years, but his knowledge is not all theoretical, on the contrary, he commenced as a locomotive fireman on the Vandavia line, where he exerted himself to his utmost to master the machine on which he was employed. Success crowned his efforts and in a few years he found himself, one fine day, a locomotive engineer, which position he held for a number of years, doing excellent service and rapidly acquiring an extensive knowledge of mechanics in general, never despairing in the search, never satisfied to let things rest on knowing that a fact was a fact—he must investigate the causes and learn through all the relative details, why it was a fact, and thus he continued to climb step by step until he discovered a larger and more lucrative field for research, at least in the acquirement of knowledge, and there he turned his attention. Success here again crowned his efforts and at the time he became a contributor to the columns

of the *Magazine* he was, as before stated, connected with a school of polytechnics. Here also a new field opened up a more extensive view—the air-brake—and with that tenacity which had carried him through so far he waded in, waist deep, and planted his battery so as to cover the walls of the topic and proceeded to besiege the fort in good earnest. That the same success crowned his efforts in this line is amply vouched for in the position he now holds in the employ of the Westinghouse Air-brake Co., and from the foregoing, we may safely infer that "Poly—" was right in his assertions regarding air-brakes and pumps and that others were wrong. I, at least, had long ago come to this conclusion from the arguments advanced and my own investigation.

And now to the car; it was most thoroughly equipped, having an upright boiler in one corner, large enough for all purposes, an electric light engine opposite, a new style Westinghouse air-pump, eight-inch steam cylinder and 7½ inch air cylinder, by which the air can be pumped up to boiler pressure, and with no leaks and everything new, a few pounds over, a double row of brake cylinders and auxiliary reservoirs along the center of the car placed in an upright position, representing a train of thirty freight cars all equipped with the new quick acting triple-valve, the use of which was thoroughly explained and instructions to use it only as an emergency stop when compelled by surrounding circumstances, to stand them on end if necessary in order to prevent something worse: the new and the old styles of engineers' valves were exhibited and the difference shown, the advantage of the new and automatic valve over the old style valve, or as is usually termed three-way cock, was fully explained, and should strike every one as being a feature worthy of note, and also why the new automatic valve or three-way cock should supersede the old, on all roads.

The triple valve was cut open giving a sectional view of it and a stem connecting it to the triple in use, or as it was termed the live triple, by which means the sectional view was caused to act exactly as the triple in use does in the application and release of brakes, all of which proved quite interesting and instructive and brought to light the fact that the number of men who are handling air every day and understand its action are indeed few as compared to the number who do not know anything except to turn the valve to apply and release brakes.

The question was taken up at the very beginning and discussed in detail, beginning with the pump as the air enters by atmospheric pressure, as the air piston plays back and forth in the cylinder by which it is forced out of the cylinder, by the discharge valve, from thence to the main reservoir

and then through all its sinuous course through the engineer's valve to train pipe from train pipe through triple into auxiliary reservoir back through triple and into brake cylinder, where it demonstrates its usefulness, from there out again by way of the triple to its native element, the atmosphere, where it wends its way with a long drawn sigh of relief and satisfaction at the part it has just performed.

Other topics were discussed and explained; the relief spring, the pressure cock, sectional view of engineer's valve, quick action and ordinary action, how to cut out, how to bleed and many other minor details, altogether almost enough to make a man stand appalled at the research and ingenuity required to bring out this wonderful and useful apparatus used so extensively and understood by so few. It seems that instruction cars should be more abundant or some other means of obtaining this most valuable information be within easy access for the purpose of giving the rising generation a chance to become proficient in the use of automatic air, that each and every one whose duty it will be to handle it in any way, whether to apply or repair, might himself become a professor in that line, able to come to the stand and deliver a lecture on the topic with precision and ease.

And now, Mr. Editor, as I am night-hawking again at this point, 100 miles south of my old night-hawk grounds, and time approaches for my labors to begin, I turn the valve to take up the slack of train and as I feel the effect, I turn again reducing my train pipe pressure one-third, my brakes are full set, I release my brakes and get down to see if any damage has been done any place, but more especially to an

Eccentric Strap.

[The *Magazine* feels a generous pride in the great success that has attended the career of Mr. W. J. Hartman. We know him well. He is emphatically a self-made man, and his steady advancement from the position of locomotive fireman, is due to his indefatigable industry and indomitable will, in which regards, he is a splendid example to firemen everywhere who are ambitious to better their condition. We are glad to have an opportunity to make the readers of the *Magazine* familiar with Mr. Hartman's work and advancement, as is contained in the foregoing letter from our esteemed correspondent, "Eccentric Strap."—ED. MAGAZINE.

LEHIGH, I. T., October 22, 1889.

MR. EDITOR:—I was reading in the August *Magazine* how to find the tractive power of a locomotive. "F. T." in answer to L. H. Evans tells how to do it and I can make the engine I am firing (by his figures) pull only

fifty-three twenty-ton cars on a straight and level track, but with 150 lbs. of steam she has pulled thirty-nine twenty-ton cars up a sixty foot grade at about fifteen miles per hour. I wish "F. T." would explain that for me; the engine is a 19 inch cylinder, 24-inch stroke, with 52-inch drivers, the weight of engine is fifty tons. If "F. T." or some else will answer this I will be greatly obliged.
Fireman.

Wants to Put the Locomotive Behind.

An inventor hailing from Kansas City has made all arrangements for placing the locomotive at the hind end of every passenger train instead of leading the way as at present. The advantages this inventor is prepared to offer to the railroad companies that adopt his plan is, the removing of the annoyance from cinders and smoke that is now inflicted upon passengers. He proposes to fit up an apparatus in the front of each train which will, by means of electrical connections, enable an operator to handle the engine behind as promptly as if his hands were there to grasp the throttle lever, the reverse lever and other connections. We have heard before of proposals to remove the locomotive to the back end of the train, but we never saw so many provisions made to overcome the most apparent objections to the scheme. The Kansas City inventor is prepared to give all the advantages the existing system gives of the engineer being in a prominent place to perceive urgent need for stopping quickly, but there are some dangers from having the locomotive behind which he has not provided against. In nearly all foreign countries and in several of our States there are laws that prohibit the use of a locomotive behind a train. Such laws were enacted as measures of safety, because experience had demonstrated that a locomotive pushing a train was apt to act as a destructive battering ram on the cars in case of anything happening to derail the forward cars. There are several other disadvantages connected with having the locomotive behind the train that we need not point out, because it is never likely to go there.

The proper remedy for the smoke and cinder in the eye nuisance is the exercise of more care in preventing them from annoying passengers when the engine is in front. When those responsible for the running of locomotives make intelligent and sensible efforts to have the engines operated in a cleanly fashion, the people have no reason to complain of smoke and cinders.—*National Car and Locomotive Builder.*

THE Illinois Central shops at McComb, Miss., are building two switching engines, one to be used at New Orleans and the other at Clinton, Ia.

How much Steam is used in a 10x16 Engine, 200 Revolutions per Minute?

It is not my purpose in this article to discuss how steam is made; nor its cost or composition; but to examine some of its properties and effects that may become apparent to any one, who will use common sense to acquire knowledge, laying aside all prejudice, and what they know is so, because somebody has told them it was that way.

Now, I don't ask you, or any of your readers, to believe what I say, just because I said it, but take the *rule of common sense*, lay it down by what I say, and if my sayings don't fill the measure, then reject them, as not worthy of attention.

Now, how much steam is used in any engine? *Certainly not more than you can make; you may use less than you could make.*

Let us then see how much can be made. We have taken an engine 10x16 to illustrate what we have to say, and it must be in motion making 200 revolutions per minute. In this paper we will not consider the starting point. A boiler to correspond with the engine, we will suppose to be twelve feet long and three feet in diameter. Such a boiler contains about 146,575 cubic inches; and the space above the second water-gauge, which is the steam space in the boiler, including the dome, is about $\frac{1}{10}$ as much as the whole boiler. Then for steam space we have 14,658 cubic inches. Let us say this space can be filled with steam at 140 pounds pressure, in fifteen minutes, and if exhausted could be replenished every succeeding fifteen minutes, throughout the day. Then you can have 14,658 cubic inches of steam, at 140 pounds pressure, to use every fifteen minutes, 977 cubic inches for every minute or 16.3 cubic inches every second. Now, the Brotherhood of Locomotive Firemen can test this and know for themselves, how much steam they can make in one, or fifteen minutes. Sometime when your steam is down ten or twenty pounds less than you usually carry, and you are at a stand still, note the time carefully, that it will take to raise the ten or twenty pounds. If you can make ten pounds per minute, then you can fill your boiler full, in fourteen minutes, at 140 pounds. Therefore, you can have a boiler full for use every fourteen minutes at 140 pounds pressure, or at 150 pounds every fifteen minutes, etc.

Now a 10x16 cylinder contains 1256.64 cubic inches. Let us say the cut off is at half stroke, with 200 revolutions per minute, the piston speed is 533 feet per minute. Then suppose, while the port is open during the half stroke, the cylinder is filled to that point (half full) with steam at the same pressure that it is in the boiler, and it must be to get the average pressure in the cylinder

that is claimed to be there. Then the cylinder must be filled once, with steam at boiler pressure, every turn using 1,256.64 cubic inches of steam, consequently, the cylinder must be filled 200 times every minute. Then $1256.64 \times 200 = 251,328$ cubic inches of steam is required for every minute's work, but we only have 14,658 cubic inches for fifteen minute's work. Now divide 251,328, the amount required every minute by sixty, and the quotient is 4188.8 cubic inches for one second. Then divide what the boiler contains, by what is required for one second, and we have $14,658 \div 4188.8 = 3.5$ seconds nearly, and the steam is all gone. Now, what are you going to do for the next fourteen minutes and 56.5 seconds for steam to run on while you make the next supply?

Now, if it takes fifteen minutes to make a boiler full of steam it must last fifteen minutes. How much then can we use every time the port is opened? These remarks are only applicable to the stationary engine, with a good governor. The ports are opened 400 times per minute, then $400 \times 15 = 6,000$ times in 15 minutes.

Now, divide the number of cubic inches of steam space in the boiler by 6,000, we have $14,658 \div 6,000 = 2.443$ cubic inches to fill half the cylinder containing 628.34 cubic inches of space; therefore if the other half of the cylinder is filled, it must be by the expansion of this, less than $2\frac{1}{2}$ cubic inches of steam.

But when it must expand 257 times its volume to fill half the cylinder, how much expansive force is left to drive the piston head through the other half of the stroke? As there is a great deal of force attributed to the expansive power of steam, let us examine it from a common sense stand point.

Quackenboss, in his Philosophy, says "one cubic inch of water will make about 1,700 cubic inches of steam." Other writers say about the same thing, and this is what you all swear by. He makes the conditions for his experiment, thus: "Take a tube one inch square by 1,700 inches long, fit in a sliding or piston head, close fitting, but easily moved, put in one inch of water, and let the piston head rest on the water." Then there is no air to interfere with the experiment except what is contained in the water. Now counterbalance the weight of the piston head, and the pressure of the atmosphere or gravity, so that the slightest additional force will raise the piston. Then apply heat, and when the water is all converted into steam, the piston-head will have been raised nearly 1,700 inches." This is steam expanded to its utmost limit in a vacuum, or with the least imaginable pressure. Then he says "take off the counter balance, and add fifteen pounds pressure, and the volume of steam will be reduced to

about one-half or 850 cubic inches. Then add another fifteen pounds, three atmospheres, or forty-five pounds pressure, and it is reduced to about one-third or 557 cubic inches, etc." Here Quackenboss stops, and what his etc. means is a little obscure; but it seems to mean add another fifteen pounds, which is sixty pounds pressure, would reduce it to one-fourth or 425 cubic inches. Then a pressure of five atmospheres, would reduce it to one-fifth, six to one sixth, and when we have $9\frac{1}{2}$ atmospheres' pressure we have 140 pounds, and the volume of steam is $1,700 \div 9\frac{1}{2} = 182$ cubic inches. But Forney's tables for steam, make the volume, at 140 pounds pressure, 179 cubic inches, three inches less than I make it from Quackenboss' experiment. But another writer says "nineteen cubic inches of water will make 20 feet of steam, or one-horse power, using up one-fourth pound of coal." He does not say what pressure his steam will have, but twenty cubic feet, reduced to cubic inches, is 34,560; this divided by nineteen, gives for every inch of water 1,819 cubic inches of steam. Hence it has neither pressure nor power if Quackenboss and Forney are right. Hence, we see from the conclusions of the above experiments that steam at 140 pounds pressure, will expand in a vacuum about $9\frac{1}{2}$ times; that is, one cubic inch of steam will expand to $9\frac{1}{2}$ cubic inches, having neither pressure nor force, which would make a cubic block of a little over two inches.

Therefore, steam is not so *expansive* as you heard it was; but still remains just as *expensive* as ever.

Again, how fast will steam pass through the throttle from the boiler to the cylinder?

Let us suppose it will move at the rate of sixty miles per hour, one mile per minute, eighty-eight feet per second. A mile is 5,280 feet, equal to 63,360 inches. Then $63,360 \div 60 = 1,056$ inches per second. Now suppose there is a hole one-sixth of an inch square through which the steam can pass from boiler to cylinder and that the volume moves through at the rate of 1,056 inches in a second; then, as there are thirty six squares of one-sixth of an inch in every square inch, it will take a column thirty-six inches long to make one cubic inch. Now, $1,056 \div 36 = 29\frac{1}{3}$ cubic inches that would pass every second. But the engine makes $3\frac{1}{2}$ revolutions every second, hence the ports are opened $6\frac{1}{2}$ times every second. As the ports are opened only half the time, the amount of steam that would get into the cylinder is found thus: $29\frac{1}{3} \div 6\frac{1}{2} \div 2 = 2.2$ cubic inches gets into the cylinder every time the port is opened or 4.4 cubic inches for every revolution of the engine, which is a little less than we found by the other method, therefore there would be a little steam left on hand or the opening could be a little larger. But if steam will pass through faster

than sixty miles per hour, your space through the throttle must be less than one-sixth of an inch square, for you have no steam to spare to make it larger. And if the throttle is larger, then steam must move slower than sixty miles per hour.

We found by using 2,443 cubic inches every time the port was opened would consume a boiler full of steam every fifteen minutes. Now multiply the number of times the port is opened by 2.2 we have $6,000 \times 2.2 = 13,200$ cubic inches, only a little less than the boiler capacity; the overplus would only last about 99 seconds. Now as this 2.2 cubic inches of steam will only expand $9\frac{1}{2}$ times at 140 pounds pressure, how much pressure have you against the piston, when the space to be filled is 628 cubic inches when the steam is cut off, and 1,256 cubic inches when it is at the end of stroke and when you have only $20\frac{1}{2}$ cubic inches to fill it, when expanded to its utmost in a vacuum?

Again, if the cylinder could be filled to the cut-off at one-half stroke, with the steam at boiler pressure, then expand to twice the volume at the end of the stroke; and it must be this, or more, if you have an average pressure of $\frac{1}{2}$ boiler pressure in the cylinder. Now, your cylinder is full of steam at $\frac{1}{2}$ boiler pressure, the piston is ready to start back, the throttle is open, 140 pounds pressure rushing in to drive it back, 70 pounds on the other side to keep it from going back. Now, if it takes 140 pounds pressure to force that amount of steam into the cylinder through a 2 $\frac{1}{2}$ -inch pipe and into a vacuum, how much force will it take to force it out of a 3-inch pipe against 15 pounds atmospheric pressure?

This would be like trying to work a water-wheel under water.

Now let us take a few outside observations. First look at the top of the escape pipe. What comes out there? A cylinder full of steam at 70 pounds pressure? No, only a little hatful of smoke. Then, when you are stopped and a big fire is in the furnace, pretty soon the escape valve flies open, the steam escapes faster than it is generated, and soon the valve is closed with a snap, therefore the question arises, how large is the vent by which the steam escapes? When thus escaping it rises up in a column of smoke or vapor. And does not this volume of vapor represent the amount of steam that is escaping? "Yes, sir," you say. Very well, then the greater the amount of steam that escapes, the larger will be the volume of smoke or vapor.

Again, suppose we make a hole in the boiler $\frac{1}{2}$ inch square, and after you have steamed up, this is thrown wide open, steam rushes out at the rate of one mile per minute. How long will it take for a boiler full of steam to escape? Divide 63,360 inches,

the rate of travel per minute, by 16, the number of $\frac{1}{4}$ inch squares contained in a square inch, which gives 3,960 cubic inches that would escape in one minute. Then divide the number of cubic inches of steam contained in the boiler by the amount that escapes in one minute, this will show how long it will take to exhaust the boiler. Thus, $14,658 : 3,960 = 3$ minutes and 42 seconds, and your steam is all gone. But, I hear some of you say, "the steam could not all escape through so small a hole in so short a time." Perhaps you are right, for as the steam becomes exhausted, the pressure is less, the rate of travel would become slower, and in a practical test, the steam would be generating during these 4 minutes, and perhaps the rate of travel is less than 60 miles an hour, all these things considered, practically it would take more than 4 minutes. But if a volume of steam through $\frac{1}{4}$ inch hole was kept up at the rate of one mile per minute, a boiler full of steam would escape in less than 4 minutes.

One more illustration. Let us take two tanks, each having a capacity of 14,658 cubic inches, and a pipe running water into them that would fill them in just 15 minutes, and that we had a cup that had a capacity of 2.443 cubic inches. Now, we have one tank full, shut off the water and turn it into the other one that is empty. Now, let us take out a cupful every time the port is opened, then in 15 minutes the tank would be empty and the other one full, thus alternating, you could continue all day and have a supply of water on hand. Or, when one is full, commence dipping out as above stated, and allow the water to continue to run in so as to fill the tank every 15 minutes, and the tank will remain full, as the boiler does with the steam. Now, when steam escapes into the air and passes off in a fog, and the greater the amount of steam that gets out the larger is the volume of fog. Now, turn your whistle loose, let her scream for all she is worth, and don't you make as large a fog as when the steam is blowing off at the escape? Don't you make twice as much fog as comes out of the escape pipe when the machinery is running? Then tell me how long you can whistle before you become out of breath (steam)?

Enough for this time. But there is "more to follow," and it is "better further on."

ARGENTA, ARK.

L. A. Wilson.

The shops of the Denver, Ft. Worth & Texas Railroad are situated about a mile from the city of Denver. They consist of a round house, machine shop and blacksmith shop—all built of stone. At present they are being somewhat enlarged, and when completed the main shop will be 60x120 feet. The blacksmith shop is 40x80 feet. About 200 men are employed. The shops are heated by steam. An order for about \$25,000 worth of machinery for the machine shops has been placed with Messrs. William Sellers & Co., of Philadelphia.

Is it an Answer to A. H. Tucker's Question?

MR. EDITOR:—In the October number of the *Magazine* Mr. Lockwood presents what he alleges to be an answer to a question regarding a locomotive of the Shaw type. If Mr. L. had not captioned his article as he did I do not believe anyone would have suspected that it contained anything relative to my question at all.

I did not ask how the 300 pounds of weight supported by each pin could balance when the pins were on the centres. Everybody knows they would, and Mr. Lockwood's former statements do not conflict with that idea, for he insists that the centres of both pins in that position are at rest. Before going any farther I wish to state that I am not trying to dispute the perfect balance of the Shaw engine. What I contend for is, that one weight moving at 75 miles per hour, and a duplicate weight moving 25 miles per hour, can not balance; and Mr. Lockwood has made it appear still more impossible for them to balance by declaring that the cross-head connected to the top pin is moving, while the one connected to the lower pin is standing still. Here we have the momentum of the moving cross head acting with the more rapidly moving weight. Now, Mr. Lockwood, 300 pounds moving 75 miles per hour can never balance a duplicate weight moving 25 miles per hour, and you know it. It may be compromising your dignity as an expounder of "correct mechanical principles" to admit it, and therefore I will not insist on your doing so, but I would like to have the writers for this department in their next communications append their opinions as to whether Mr. Lockwood, in the October number, has given a fair answer to my question.

A. H. Tucker.

CHILLICOTHE, MO.

WILLIAMSBURG, VA., Nov. 6, 1889.

MR. EDITOR:—Reading "Dirigo's" reply to H. G. Prout, in last month's *Magazine* brings to my mind a night in 1854, when I worked a heavy freight train over a hundred miles of very hilly country without a throttle vale. I lost it by reversing suddenly with throttle shut down. It worked on a face similar to a slide valve, only perpendicular, and was held in place by a spring plate fastened at one end and doubled round the back. I had just started on a down run of eighteen miles without steam when I saw a station red light signal. I whistled and reversed only for a moment, when I got "all clear," threw her forward and she bounded; nearly a hundred and forty pounds of steam and all on the steam chests. I reduced steam as quickly as possible and kept the lever swinging back and forward over the

center. Three of the banks I had to run down aggregated forty-two miles, with a few smaller ones. My engine was a 18x24 cylinder, running 140 pounds of steam. I had to keep my lever swinging most of the time, and neither myself nor the engine was any the worse. Now, what about the 19,000 pounds on the slide valve? I did not feel it, and she did not try to pitch me out of the window as some objectors to full throttle expect.

Yours respectfully,
William Gore.

MR. EDITOR:—I have clipped the following query and answer from a recent number of the *Scientific American*:

W. M. A. asks: Do you consider the valve motion commonly used on locomotives a direct valve motion? A. Yes; a direct valve motion. The shifting or stationary link does not change the direct action of the eccentric. The old rock shaft valve gear was an indirect valve motion.

The foregoing is respectfully submitted to the readers of the *Mechanical Department* for their views as to the correctness of the answer given.

"Agin the Railroads."

We are indebted to Mr. E. C. Kinney, of the Union Pacific Railway, for the following concise but lucid explanation of the source of many of the granger railway difficulties, which is cut from a letter of an aggrieved resident to the *Madisonian*:

"For some weeks past my dog has been in the habit of sicking himself unto the cars as they sped past my place, and he never harmed no one one by so doing, nor never would, as I have known him from a child, being peaceful and fond of young children and awful from the butcher's shop, or would set up and beg or ask for what he requested at any time. When he would run at the train he would act savage, but still would never injure the train by word or deed if I had a hundred trains wizzing past my place I know he would not harm any of them by night or day, but what does the fireman on the Manitoba Madison Northern Utah Railroad do but urge my dog to a high rate of speed and whistle to him to get him close, and then pelt him with wood or coal, or squirt hot water on him, which he tells me, in a bilthe and gay tone, that makes me hot, he does to take the bark of my dog. That is what makes me halt the railroad—and that is not all by a longchock for yesterday they miled my dog and got him in front of the engine when they pulled her wide open and squashed my dog in a way that hurts the rode, and causes it to be looked at askance by every thinking taxpayer and mother. Why will we submit? And also they have killed one child, as they claim by mistake, for which they paid \$50, which is no price at all for a child as children goes, and is almost like flinnin' a child in the rode. I say fy on such a rode as that, with its sandwiches, which has just a thin rim of ham around the alge, so's when you lock your teeth into it you get left, and the rode has got your money and your name is Dennis, as we say here. Fy on the whole thing is what I say, and I wish you'd print it for I don't care who knows it.—*Engineering News*.

The Chattanooga, Rome & Columbus Railroad Co. will rebuild their machine shops at Chattanooga, Tenn., recently destroyed by fire.

Shop Notes.

It is reported that the Texas Central Railroad Company will move their machine shops and round house from Corsicana to Houston.

The Burlington & Missouri River Road will build during the present year repair shops at McCook, Neb., to cost \$40,000, and which will give employment to from 800 to 1,000 men.

The Louisville, St. Louis & Texas Railroad Co. will rebuild their machine shops recently burned at Henderson, at Cloverport, Ky. The citizens raised a bonus of \$20,000 to secure the shops.

The Toledo, St. Louis & Kansas City Railroad Co. is making plans for new shops covering 50,000 square feet of ground, to be located either at Frankfort or Marion, Ind.

The machine shops of the New Orleans & Northwestern Railroad, at Meridian, Miss., are to be enlarged by the erection of a two-story brick building, to contain machinery for car building and paint shop.

The West Virginia Central & Pittsburgh Railroad have decided to build machine shops at Elkins, and work will soon be commenced on the structures. Elkins will be made the mechanical headquarters of the company.

The machine shops of the New Jersey Central Railroad at Phillipsburg, which have been running on half time for several months, were started up on full time last month. They give employment to nearly a hundred men.

It is reported that the Louisville & Nashville Railroad shops will be removed from Bowling Green, Ky., to Memphis and Nashville, Tenn., the work being divided between these places. The reason for the removal is said to be high taxes.

The Mexican National is building large machine shops and car works at Laredo, Texas, which will be completed within two months. The buildings are very extensive, and they will be equipped with the best machinery in the market. When the works are finished all the mechanical production connected with the system will be concentrated at Laredo.

The Minnesota Iron Car Company has filed articles of incorporation for a reorganization of the Minnesota Car Company, of Duluth, Minn. The company will have a capital stock of \$2,000,000, and the general nature of its business, as stated in the articles of incorporation, is to smelt iron and other ore, to manufacture pig-iron and its kindred products, railroad cars of all descriptions, locomotives, marine and stationary engines and machinery, iron and steel rails and plates, railroad fastenings, bar-iron and forgings of all kinds, and castings of iron, steel, brass and other metals, malleable iron, tubes of iron or steel, metals for structural purposes, and all materials necessary for or incident to the production of railroad equipment and construction, and for any other purpose.

THE latest idioey in locomotives is a compound with two boilers, one on top of the other, and the engine and tender are to be incased in a shell of thin iron tapering off to a point in front, the whole machine being 75 feet long and weighing in working order 91½ tons. It is to have two pairs of cylinders 15½ by 19½ inches, and four coupled driving wheels 9 feet 9½ inches in diameter. Great power and great speed are both claimed for this novel combination of parts and proportions, the ordinary gait being modestly placed at 75 miles an hour, but this being capable of increase to 92 miles an hour. Thus far the scheme is exclusively confined to paper, but there is no saying how soon capitalists, who act as consulting engineers for themselves, may provide the means for making a practical demonstration that there are not millions in this kind of locomotive.—*National Car and Locomotive Builder*.

Locomotives.

The Toledo, St. Louis & Kansas City road recently placed an order for building fifteen new locomotives.

The Rogers Locomotive Works, Patterson, N. J., are building six engines for the Sioux City & Northern Railroad.

The Louisville, St. Louis & Texas has placed an order with the Pittsburgh Locomotive Works for two consolidation engines.

The Fort Worth & Rio Grande has recently put in service two new freight locomotives from the Rhode Island Locomotive Works.

The Pennsylvania Company's shops at Fort Wayne, Ind., are building eleven consolidation locomotives of class 8 for the road.

The Pennsylvania shops at Altoona, Pa., are building seventeen very heavy passenger locomotives for use on the New Jersey divisions.

The Denver, Fort Worth & Texas Railroad has ordered from the Baldwin Locomotive Works ten consolidation engines, with 20x24 in. cylinders.

The charter of the Richmond Locomotive and Machine Works has been amended, so as to allow the company to increase its capital stock to \$2,500,000.

The New York, Lake Erie & Western has placed an order with the Baldwin Locomotive Works for three 10-wheel passenger engines, with 20x24 in. cylinders and 68 in. drivers.

The Baltimore & Ohio has now received the last of the eleven locomotives recently ordered from the Baldwin Locomotive Works, which are arranged for burning coke fuel.

A statement has been made public that Mr. George W. Tilton, of the Chicago & Northwestern Railway, has indorsed the Swinnerton locomotive. We doubt the truth of the story.

The Empire & Dublin Railroad has ordered two eight wheel engines from the Rhode Island Locomotive Works. The East & West, of Alabama, has given the company a similar order.

Some experiments have lately been tried on the Philadelphia & Reading Railroad with electricity as a means of increasing the adhesion of locomotive driving wheels. Great increase of adhesion was claimed. We continue to be rather skeptical about the utility of electricity in this way.

All but eight of the locomotives that were wrecked at Conemaugh and Johnstown during the flood have been received at the shops of the Pennsylvania Railroad Company at Altoona, Pa. Seven have been repaired, and are now doing service on the road.

The change of President of the Atchison, Topeka & Santa Fe is likely to have a depressing effect upon the Strong Locomotive Company. The new management of the Santa Fe are said to be trying to back out of the order given by Vice President Smith for two Strong locomotives.

All the machinery in the Hinkley Locomotive Works in Boston has been sold. About two-thirds of it was sold at private sale, and the remainder at auction. The property occupied by the works has also been sold and will be used for the electric plant for the West End Railroad Company.

The Portland Company, at Portland, Me., has resolved to continue the manufacture of locomotives in spite of reports to the effect that the business was to be given up. Some changes are to be made with the view of cutting down the expenses as much as possible. Besides locomotive work, the shops are doing a good deal of marine engine and repair work.

Cars.

The Terre Haute Car & Mfg. Co. has contracts to build 500 coal cars for the Chicago & Northwestern.

An order for 500 gondola cars of 25 tons capacity is said to have been placed by the Beech Creek road.

The Ohio Valley road will soon commence building four freight cars and two cabooses at its shops at DeKoken, Ky.

The Wells & French Company, of Chicago, are building 500 box stock and coal cars for the Rio Grande Western Railroad.

The St. Charles Car Company, St. Charles Mo., is building thirty passenger cars for the Rio Grande Western Railroad.

The Delaware & Hudson Canal Co. has let contracts to the Jackson & Woodin Mfg. Co., of Berwick, Pa., for building 250 cars.

The Union Pacific will soon let the contract for building a number of new freight cars, in addition to the order for 300 recently awarded.

The Barney & Smith Mfg. Co., of Dayton, O., has just completed two handsome dining cars for the Cleveland, Cincinnati, Chicago and St. Louis.

The Erie Car Works, Erie, Pa., are building 100 coal cars for a New England road, 100 for the Baitney Bank Coal Company, and 300 for the Pennsylvania Railroad.

The Pullman Car Works, Pullman, Ill., have orders on hand for about 1,000 freight cars, including a large number of box cars for the Georgia Pacific Railroad.

An order for 35 ft. coal cars has just been completed at the shops of the Illinois Central at McComb, Miss. Work will soon commence at these shops on 25 stock cars, 35 ft. long.

The Georgia Southern & Florida Ry. Co. has just placed an order with the United States Rolling Stock Co. for 300 fruit cars, to be equipped with the Dunham combination fruit car door.

The Toledo, Columbus & Hocking Valley has recently let contracts for building 750 cars, and the Kansas City, Ft. Scott & Memphis is also said to have 500 cars under contract on a recent order.

The Wheeling & Lake Erie has awarded the Terre Haute Car & Mfg. Co. the contract for building 250 coal cars, and the Peninsula Car Co., of Detroit, has received an order for a similar number.

The Baltimore & Ohio resumed work this week at the Mount Clare shops and several hundred men are now being employed. Work is to be started immediately on the cars for four new vestibule trains.

The Pennsylvania Company is building two passenger coaches which are to run between Pittsburgh and Washington, Pa. The cars will be fitted with Forney car seats and lighted with the Frost carburetted light.

The Pennsylvania Co. has given an order for 200 cars to the Missouri Car & Foundry Co. These cars will be equipped with the standard brake rigging lately adopted by the M. C. B. Association, and Janney couplers.

The Pennsylvania Company's shops at Fort Wayne, Ind., are building 100 refrigerator cars for the Pittsburg, Cincinnati & St. Louis Railroad. These cars are of the same pattern as 100 completed for that line a short time ago.

The Minnesota Iron Car Company has been incorporated successor of the Minnesota Car Company. The incorporators are John F. T. Anderson, W. E. Tanner, and Joseph W. Anderson, of Richmond, Va., and George W. Kittinger, of New York. Its capital will be \$2,000,000.

EDITED BY IDA A. HARPER.

All Correspondence pertaining to this Department should be directed to

MRS. IDA A. HARPER,
TERRE HAUTE, IND.

DECEMBER, 1889.

SUGGESTIONS FOR HOUSEKEEPING.

The reporter of some paper claims to have had an interview with Mrs. Cleveland in regard to her new home, and, in reply to his question whether she thought she should like housekeeping, she said, "O, yes; that is the only way to live." Perhaps she said it and perhaps not; certainly her experience in the White House with an army of servants and all the formality of official life would not give her much of an idea of the delights or the drawbacks of housekeeping. But the point is that every newspaper in the country has copied this remark and commented upon it as if it were something remarkable. On the contrary ninety nine women out of a hundred entertain exactly the same opinion, that the only way for married people to get full enjoyment out of life is to keep house. There is occasionally one whose health is impaired or who is very lazy or who is a poor manager or one who is absorbed in the frivolities of life or wants a mission outside of home, and these persons will declare they do not like housekeeping, but they are the exceptions among the great body of women.

There are reasons why women may get very tired of keeping house. Where a large house and a great deal of work make it necessary to keep help the servant girl question becomes a very serious problem and causes an almost endless annoyance. And on the other hand, finding one's self without a girl when one is most needed is an almost insurmountable difficulty. Where a housekeeper does not employ any assistance, the accumulation of tasks seems almost appalling, and looking into the future and seeing the same endless succession of the same tiresome duties, sometimes make a woman feel as if anything would be preferable to the drudgery of domestic life. Now if it were possible to find a way of living that was absolutely free from care and annoyance no one could blame women for wanting to enjoy that delightful state of being; but there is no such thing. The housewife who is wearily treading the round of her duties

looks with envy upon those of her sisters who are boarding and have nothing to do but look after one or two rooms and go to the table three times a day to find the meals all prepared. This seems very agreeable, but let us look into it a little.

Having but one or two rooms to take care of means being compelled to live, day in and day out, in these same one or two rooms, with no place to entertain company or to move about when tired and restless. Not one boarding house in twenty sets a first-class, clean, palatable, healthful table. But granting that the food is all this, you cannot cater to your taste but must eat what is set before you. You have steak when your appetite calls for chops, fresh meat when you want smoked, roast when you crave a pot-pie, biscuit when you would like cakes, pie when you prefer pudding, and so on down the list. You lose the pleasure of having just what your appetite happens to demand. In addition to this you must eat with a table full of people and have no opportunity for the lively, pleasant conversation with one's family which should be an important feature of every meal. But the most objectionable point of all is the complete loss of that independence which can only be experienced under one's own roof and around one's own fireside. As to raising children in a boarding house that is so obvious a sin against nature as to be beyond the pale of discussion. To deprive children of the freedom and the pleasant associations connected with home is to take away from childhood its keenest delight and its most hallowed associations.

Let us examine very briefly the principal drawbacks to the pleasures of housekeeping. First, the inefficiency of hired help; the time will come when we will have classified labor in domestic branches and can secure skilled assistance by paying for it, but now, as a general thing, we cannot expect to get anything but apprentices in the kitchen. The average woman does not know how to properly train a servant. In some cases she is not herself a skilled housekeeper. In others she has not the patience, tact and discipline necessary to transform ignorance into knowledge. I remember among others a girl who boiled potatoes just as they came out of the ground without washing them, and had never heard of scouring a kitchen table, and yet she developed into a first class housekeeper and remained with me several years until she married. What a housewife wants first of all is a thorough system and management in her work. She needs to conduct her affairs with the same method as a man carries on his business. Working on a programme by schedule time would lighten the labor of housekeeping by one half. While it is not practicable to carry

this out to the minute, it is possible to make a vast improvement on the slipshod, haphazard manner in which many households are managed.

In the first place there should be punctuality. The meals should be served exactly on time and the family should be required to be prompt at the table. Order is essential throughout the house from the kitchen to the bedrooms and no member should be permitted to make unnecessary work for another. There should be a distinct system as to the time in which each portion of the work should be done, a certain task for each day in the week, and each portion of the day, always arranging for some leisure. The marketing should be carefully looked after, not waiting till an article is needed and then sending out after it. Endeavor always to have an air of neatness, thrift and cheerfulness pervade the house. Do your work with the same energy and ambition as you would practice law, manage a store or run an engine.

"Who sweeps a room as by God's laws,
Makes that and the action fine."

Of course it will grow monotonous. Is there any work in the world which followed day after day does not weary with its monotony? Of course you will sometimes grow discouraged at the prospect of doing the same thing every day as long as you live. So do men in all kinds of business occasionally feel as if they would rather do anything else than that particular work which is just what they will always have to do. When this discontent and fatigue come over you, lay aside the tasks and get away from them. Make a little visit or take a walk or go to an entertainment. Rest mind and body, divert your thoughts, compare notes with your fellow men and women and you will go back home strengthened and sustained. Make the very best of the situation in which you find yourself, improve your condition by every possible means and try to find contentment for yourself and those about you.

If this should meet the eye of any husband I hope he will permit me to say that no matter how wisely the wife manages, the comfort and happiness of home will be but one-sided and imperfect unless you also perform well your part, which is of equal importance with hers. Very few men make enough money to spend any considerable portion of it outside of their own household. A wife will soon grow tired of trying to make home pleasant unless the husband shows his appreciation by spending his leisure hours with his family. Marriage, love, home, all will be a failure unless the habits of husband and father are pure, temperate and such as to command the respect and affection of wife and children.

ELSEWHERE we call attention to a letter from our well known contributor, Alice O. Darling. This does indeed let in a gleam of daylight but does not entirely dispel the mystery. In the first place the poem signed "Will o' the Wisp" appeared in the *Magazine* outside of the Woman's Department, and I never see any of the manuscript except what is sent in expressly for our Department, so that I had no opportunity to recognize the handwriting. In the second place I prepare the letters and send them up to the publishing house nearly two months before they appear in the *Magazine*, and with the great press of daily newspaper work I cannot always recollect when I examine the new *Magazine* whether all the letters that were sent in found a publication. But this I do remember most distinctly, that a long time ago I examined the manuscript of "The Narrow Gauge," and I think the accompanying poem "I Did," and sent them to the printers. They made a strong impression upon me as they are written with a peculiar rhythm. When they came out several months ago in Vol. XIII., No. 4, page 306, my first thought was that they had previously appeared in the Woman's Department signed by Alice O. Darling, and being very busy I made this statement without hunting them up. Afterwards when I came to look for them they were not to be found. I have been completely mystified regarding them ever since, and if our correspondent will make this matter clear I shall be under personal obligations.

TEMPERANCE.

A Mississippi town of 7,500 inhabitants provides a large number of saloons for the men to get drunk in, but has repeatedly failed to sustain the existence of even one ice cream parlor for the refreshment of wives and children. The same stream of money could not flow in two opposite directions.

The Mayor of Oxford, England, after hearing that in one district containing only 200 houses altogether, there were, within a radius of a hundred yards, ten licensed beer shops, besides four beer houses, concluded that 'no sufficient reason' had been given for refusing the renewal of all these licenses.

Rum in the United States makes more than 1,200 funerals of inebriates every day, and you help pay for the coffins and grave-diggers; you pay for the board, washing and clothes of the men who stagger out from the rum saloons to fight or shoot or debauch society and are imprisoned.—*Frank Leslie's Magazine*.

Though there is occasionally a liquor user who appears to enjoy good health, and who goes on to 'ripe old age,' he is no more to be taken as a proof of the general harmlessness of drink than is the man who stands in the thick carnage of battle a proof of the general harmlessness of missiles of war.—*Elisha Cheney*.

DOMESTIC.

The best covering for a poultice or a mustard paste is tissue paper.

Soft tissue paper is the best for polishing mirrors. This may also be used for polishing or drying window-glass.

When you want to take out a broken window-pane, heat the poker, run it slowly along the old putty and soften it loose.

Baked Sweetbreads.—Wash and parboil the sweetbreads, throw them into cold water to cool. When cool, take off the fat and tough skin, being careful not to break the sweetbreads. Put thin slices of salt pork or bacon in the bottom a baking pan, put the sweetbreads on top, dust them thickly with flour, sprinkle with salt and pepper, put a small piece of butter on each sweetbread and bake in a quick oven thirty minutes, basting three or four times. A half-cup of stock or water may be added to the pan. Serve these in the center of a meat dish, surrounded by nicely cooked green peas.—*Table Talk.*

Pickled Melon.—In pickling a young musk or nutmeg melon, cut a hole in the side through which to extract the seeds, saving the piece that is cut out. Then lay the melon in a strong brine, which should entirely cover it. There let it remain for three days; take it out, rinse it, and let it lie in clear, cold water over night. Then, after draining, fill it with chopped cabbage, seasoned with mustard seed, horse-radish, a little ginger, some sugar, celery seed, and, if possible, some small cucumbers. Sew in the piece that was cut, and put the melon in a stone jar and pour hot vinegar over it. About three months will be taken for the pickling, the time depending on the size of the melon, but when it is done a delicious relish will be the result.

Chicken Soup.—A fully mature and fat fowl should be cut up and lay in perceptibly salt water some hours; better all night. Cover with fully one-third more of water than you require of soup, and boil slowly until the fowl is reduced to rags, except the breast, that should be taken out when well done. When ready to finish, the soup should be strained and returned to the pot, and the breast finely minced; also some rice boiled tenderly on some slips of short biscuit dough rolled as thin as a knifeblade and cut into short pieces, beaded. A head of celery, a flavor of thyme, with pepper and salt, are all the seasoning needed for chicken soup. Of course this soup can be made of the liquid in which chicken or turkeys have been parboiled, as many people practice in preparing them for roasting, as we call the practice of baking nowadays. Indeed, in soup-making for the family the meat is nearly always taken out when well done and used by dressing with proper sauce as boiled; or it is baked or reserved for hash.

EDUCATION.

Miss F. C. Graf, of Switzerland, has been called to the chair of modern languages in Colorado College, Colorado Springs, Col.

Mrs. Maria H. Welles, of Hartford, has presented the \$200 scholarship which constitutes the prize offered to young women for the best entrance examination to the Hartford Theological Seminary.

Mrs. Lydia Sexton, who is in her ninety-first year, preached a powerful sermon at the Ocean Grove Methodist Camp Meeting a few days ago. She spoke without notes and without apparent fatigue, and showed a remarkable memory.

Miss Lillian A. Honeywell, A. M., who is twenty-five years old and has served as professor of mathematics in Hedden College, Knox county, Ill., for the past three years, is said to be the youngest college professor in America occupying an important position.

Miss Fanny Forrester, a young writer of workers' poems and patriotic Irish ballads, whose fame and name had just begun to spread, died recently in England. Born in the ranks of poverty, her noble songs for the toilers won her great popularity and a place in English periodicals.

Miss Nora Breckinridge, a very bright and intelligent young colored girl, of Des Moines, Iowa, has passed the required examination and been granted a County certificate to teach in public schools. She is the first colored girl who has ever been granted a certificate in Polk county, and the colored people are very proud of her success.

The Louisville *Courier-Journal* suggests that women be admitted as members of the Commercial Club, on which the editor of the Woman's Column in the *Southern Journal* asks: "If not, why not? Women certainly contribute a large share to the commercial prosperity of the city. Then, why not belong to the Commercial Club?"

The seminary for girls, recently completed by the Cherokee Nation, has all the modern conveniences, except elevators and electric lights. Four Cherokee girls will act as teachers this year. One of them, a Miss Stephens, has just returned from a musical school in St. Louis, where she acquired quite a reputation as a pianist.

Mlle Marie Pierre, who has just taken the degree of M. D. in Paris, was a very brilliant student, accomplishing in four years what most men take six, eight and sometimes ten years to go through. She is said to be very popular with the hospital patients because of her care and gentleness, and she is also noted for her kindness to animals. She is expected to be a strong recruit to the anti-vivisection party.

INDUSTRIES.

Mrs. Harriet A. Ketchum, has been awarded the first prize (\$500) for a design for the Iowa Soldiers' Monument.

Mrs. Emily Crawford, the Paris correspondent, is about to receive a testimonial from English and French women journalists. Mrs. Crawford has lived in Paris over thirty years.

It is reported that Mrs. J. C. Cochran, of Shelbyville, Ill., has sold the right to her recently patented dish-washing machine to a Decatur firm for several thousand dollars cash and the promise of a royalty on all machines sold.

Mrs. William Sowders, who formerly conducted a fish and game business, has been a member of the Louisville (Ky.) Board of Trade, in her own right, and several other women are members by virtue of their partnership in business with men.

Mrs. Hattie Fox, whose death occurred recently was one of the most rapid women composers in the office of the Brooklyn *Eagle*. She was a daughter of the editor of the *Journal of Hallowell*, Me., and learned her trade in her father's office.

White Shield League of St. Paul, Minn., is taking steps toward securing an industrial home for needy and unfortunate women and girls, and other rescue work. They already have a matron at the Union Depot, and hope to get a police-matron appointed ere long.

Mrs. Callie L. French, a Cincinnati woman, is licensed as a pilot from Vicksburg to New Orleans and the Atchafalaya River and its tributaries, being registered at New Orleans. Mrs. French has acted as a pilot on the Mississippi River for twelve years, under the direction of her husband, Capt. A. B. French.

In Copenhagen, lately, a ladies' meeting strongly recommended the establishment of a school for maid-servants, in which, from the age of fourteen, they could receive specific instruction in the art of cookery, and also in cleanliness and order. The question of fixed working hours for servants was also discussed.

Mrs. M. A. Y. Palmer, of Pittsboro, Chatham county, N. C., who owns nearly 500 acres one and a half miles from the railroad, writes to the *Boston Traveler*, offering to give the land for any kind of steam factory and buildings, in order to encourage a settlement of operatives, and thus create a market for farm products.

Miss Glenn, a daughter of the late Samuel Glenn, once editor of the *Boston Herald*, is a valued member of the New York *Herald* staff, and much of the London matter cabled to that paper is the work of Mrs. Annie Wakeman. Nellie Hutchinson does hard and admirable work on the *Tribune*. Mrs. Beatty is respected and loved by every writer on the *Sun*.

MISCELLANEOUS.

A Scotch lady once asked a widowed acquaintance as to the character of her late husband, "What kind of a man was he?" "Well," was the suggestive reply, "he was just an expense."

Don't flatter yourself that friendship authorizes you to say disagreeable things to your intimates. On the contrary, the nearer you come into relation with a person, the more necessary do tact and courtesy become.—*The Autocrat of the Breakfast Table*.

A gentleman recently returned from a drive through the country towns of New York asserts that he has not very much objection to a cottage that is consistently Queen Anne all through; but he evinces a strong antipathy to those houses—and their name is legion—"that are Queen Anne in front and Mary Anne at the back."

A little girl's mother wanted her to go to bed before she felt sleepy. "But the moon hasn't sent her children to bed yet," objected the little astronomer, petulantly. It so happened that a storm was brewing, and heavy clouds were gathering in the heavens. "Go and see if she hasn't," said her mother. The little head was popped out of the window, and the sky was scanned eagerly, "Well, I guess I've got to go to bed now," she said, after the survey; "the moon is covering up her children and tucking them in."

A man, last Sunday, was about to lay his hand upon the door of the church, when a little girl in the street said: "You can't get in there, mister." "Why not," he said, "isn't this a church?" "Yes," said the little girl, "but the preacher has gone to Europe for six months, and taken God with him."—*Detroit Tribune*.

FREEDOM.

I pluck the milkweed's pallid pod,
And set it with the golden rod;
I tarry long, I linger late,
I cry; O world of work, await;
I cannot hasten unto thee.
In Nature's kingdom I am free—
Free from the worker's ceaseless strain,
Tasks never done, the low, dull pain.
Piercing the overburdened brain!
O weary world of work! await,
Nor call me from my high estate.

—*Mary Clemmer*.

Says Geo. Kennan of a Siberian prisoner: "I was surprised to find her so young, delicate and a harmless-looking woman. I had been surprised, however, in the same way many times before. The women who have taken an active part in some of the most terrible tragedies of the past fifteen years in St. Petersburg, Moscow, Kiev, and Odessa, who have shown a stern inflexibility of character rarely found in men, are delicate girls from eighteen to twenty-five years of age, whom I should have taken for teachers in a Sunday school, or rather timid pupils in a female seminary."

HOME LIFE.

Short and simple the words, but how much do they contain? Let us hope the meaning and end of those two simple words will not be so carelessly treated as they are carelessly spoken of.

"Tis very easy to have a happy home," we hear one man say. May he never know the meaning of an unhappy home! But how easily a home can be made unhappy!

Let the husband return from his work, evening after evening, with a frown instead of a smile, a curse instead of a kind word, and how quickly will that home be wrecked?

O! ye husbands! who have formed this God-forsidden habit, make a firm resolve *never* to do so again! But instead give the much needed and highly appreciated smile, and see what a happy change.

What wife has the heart or courage to give a cross husband a hearty welcome?

On the other hand, wives, be kind to your husbands; for *no other thing under the sun* will so readily drive a man to destruction as unkindness.

Do not always be ready with a "lecture" when he does something displeasing but, rather, pay little or no attention at all. Or if you *must* say something, speak gently to him and you will be amply repaid.

Let home work and home duties be done with cooperation. Then, and then only, will "Home Life" be happy.

Annie T. Lynch.

HOUTSVILLE, W. VA.

HANOVER, N. H., October 21, 1889.

To the Editor of *Woman's Department*:

The "Narrow Gauge" controversy seems to have taken an injection of the Brown-Sequard famous elixir, for I find it as lively as ever in the October *Magazine*. In that number you say, "Will-o'-the-wisp will confer a great favor if he will tell us where he got the poem."

"Will-o'-the-wisp" got the poem out of her not "his" own head.

Moreover "Will-o'-the-wisp" and Alice O. Darling are one and the same person. Furthermore if you will take the trouble to examine carefully page 306, No. 4, vol. 13, you will see that "The Narrow Gauge" is not signed by "Will-o'-the-wisp" at all. That is the signature of "I Did," written in answer to "The Narrow Gauge," but a distinctly separate poem with an entirely different title.

You suspect "Will-o'-the-wisp" of having stolen "The Narrow Gauge" when she didn't even sign it.

Now then, last February my brother received a letter from Mr. J. C. Muzzey, a member of his lodge, at that time visiting in the west. In it he enclosed the verses "The Narrow Gauge" which he had written for the entertainment of some social gathering in the place where he was stopping. I copied his verses and signed his name to them. I then wrote the verses "I Did" in answer and signed them with my *nom-de-plume*.

Then, with Mr. Muzzey's knowledge and consent, I sent the whole to the *Magazine* and they were published in Vol. 13, No. 4, page 306. Is there anything in this that won't bear daylight? If so, please point it out. You may think that I should have acknowledged my identity in my first letter on the subject. It might have simplified matters a little but could have had no direct bearing on the question at issue. I did not think to blind you with my *nom-de-plume* as you had examined so much of my manuscript that I supposed you would recognize my handwriting.

You still insist that one of these poems, I can't make out which, has been published in the *Magazine* before. If this is so, it should not be a very hard matter for one in your place, with a file of back numbers to refer to, to prove it. Therefore I earnestly and respectfully ask you to do so or else acquit both Mr. Muzzey and myself of literary theft. "Altonia, J. L." doubtless meant well but I should have appreciated her kindness more if she had left the quotation marks off from my name and told us some news, as she has simply discovered the only and original publication of the verses in question. I thank her for her search and subsequent conclusion.

Will you allow me in closing to put this matter in a nutshell for the benefit of your readers who might be pardonably puzzled by now?

On page 303, No. 4, vol. 13 of the *Magazine* are two poems. I wrote one of them and stood sponsor for the other. You say that one of them had been published in the *Magazine* before, and I say prove it.

If after publishing this you should conclude that you have made a mistake, I can suggest a way in which you might possibly have made it. Until then such suggestions on my part would be presumptuous.

Most sincerely,

Alice O. Darling, alias "Will-o'-the-wisp."

TYLER, TEX., October 8, 1889.

To Editor *Woman's Department*:

The October number just received and looked and read all through as I have almost always done since there was a *Firemen's Magazine*. Now, what I want to say is this, that I never see anything from Sunny South Lodge. We have a good Lodge here, all good men. M. S. Bannan, the Master (an engineer) had a collision the first of the month. His engine, No. 110, and another, met on the main track. The operator failed to give the order to the other engineer, so the boys almost lost their Master. He jumped; said he would rather make a good, sure jump than a bad stand, any day. What is the matter with the ladies' department? Now, Tyler is a nice place; lots of nice railroad people. Why do not the firemen's families and sweethearts get up something nice and have a good time like other places? This is my first attempt, so I guess I will close by wishing the B. of L. F. all the success possible, as it deserves all praise. Is the sincere wish of an engineer's sister, also an engineer's wife.

The following poem was written by Miss Ida Hall a short time before her death but after she realized that the messenger was likely to come at any hour. The circumstances render the poem extremely touching. Miss Ida was a sister of Geo. W. Hall, whose writings are familiar to the readers of the *Magazine* :

SLUMBER SONG.

Come, gentle sleep, and touch my eyelids, making
The soul forgetful of its deadly pain.
Ah! let me sleep! too soon will come the awakening,
Too soon my heart must feel its griefs again.

I would forget awhile the cares that bind me
In waking hours, to earth and earthly things.
In slumbers sweet I leave them all behind me,
No more they vex me with their venom'd stings.

Borne on the wings of slumber—spirits, hovering
Between a darkened earth and starlit sky;
I seem to pierce the dark and cloudy covering
That hides the immortal from the mortal eye.

What glorious sights before my dazzled vision
Break through the veil and charm my wondering eyes!

What silvery sounds from lips of choirs Elysian
Float down and fill my soul with glad surprise!

Seraphic forms glide through the golden ether
With crowns of gold upon their radiant brows;
Nearer they come, and now they round me gather—

Oh, how my heart with rapture burns and glows!

White are their robes as for a bride's adorning,
And in their hands they bear the sacred palm,
Emblem of victory over death and mourning,
Bestowed on those who know eternal calm.

And now they float away, they mount the skies,
Their forms grow shadowy in the lessening light;

The glory fades, the heavenly music dies
On the still air, and all again is night.

'Twas but a dream—I awake again to sorrow,
The sighs and sounds of earth arise once more;
But, blessed thought! there comes a glad to-morrow.

When grief and tears and sighing will be o'er.

Courage, my soul! the golden day is dawning,
Thy dreary pilgrimage is almost done!
Dark was the night, but radiant is the morning;
One more short struggle and thy crown is won.
Ida M. Hall.

STANBERRY, Mo., June 21, 1889.

LYNN, MASS., October 23, 1889.

Editor Woman's Department:

Having seen an article in the *Locomotive Firemen's Magazine* on running trains on the Sabbath, thought I would like to address a few lines to you on that subject. The spirit manifested by those men who would keep a Sabbath of rest holy unto the God of Heaven, is truly commendable. God says in His blessed and Holy Word, "Wherefore the children of Israel shall keep the Sabbath, to observe the Sabbath throughout their generations, for a perpetual covenant. It is a sign between me and the children of Israel forever."—Ex. 31, 16-17 verses. Isaiah, 56, 2, says: "Blessed is the man that doeth this, and the son of man that layeth hold on

it; that keepeth the Sabbath from polluting it, and keepeth his hand from doing any evil." In the 5th verse He says He will give them a name better than of sons and of daughters, an everlasting name that shall not be cut off. Also in the 58th chapter, 12th and 13th verses, He says: "And they that shall be of thee shall build up the old waste places; and thou shalt be called the repairer of the breach, the restorer of paths to dwell in. If thou turn away thy foot from the Sabbath, from doing thy pleasure on my holy day, and call the Sabbath a delight, the holy of the Lord, honorable; and shalt honour Him, not doing thine own ways, nor finding thine own pleasure nor speaking thine own words." 14th verse: "Then shalt thou delight thyself in the Lord; and I will feed thee with the heritage of Jacob, thy father; for the mouth of the Lord hath spoken it."

This inheritance is eternal life to all those who keep God's commandments and have the faith of Jesus. All this is not spoken of the Sunday Sabbath. It is the seventh day Sabbath that God has blessed and sanctified to His own use, and He will not accept any other day in its place. In the fourth century there was a law enacted to compel the people to keep Sundays as the Sabbath, and Constantine, a pagan heathen, enacted this law, and when he came into the church of Rome he brought the venerable day of the sun in with him, and some years after the Bishop of Rome confirmed it and called it the Lord's day. There is not one word in favor of Sunday from Genesis to Revelation, but all the way through, the Bible God is calling His people to keep His law. It is time to awake to righteousness and sin not. This Sunday law that all the world is going mad over is the image to the Beast, spoken of in Rev. 13th and 14th chapters, and God's people would do well to read and heed it. Yours very truly,

Sarah E. Alley.

DUNMORE, PA., October 10, 1889.

Editor Woman's Department:

As I was looking over the *Magazine*, October number, I saw nothing about our new Lodge just organized here, called Gravity, No. 401. According to all accounts it is prospering fine y. As far as my acquaintance extends, every member is very punctual in his attendance and seems to show a very great interest in this good work. I often tell my husband that he would rather go without his dinner than be late at Lodge, but as promptness has ever been a leading practice of my life I preach it to others. I have always been in favor of societies where man will stand up for man and principle, and I uphold this organization in their noble work, and may many more come under this banner of protection. I have often wondered at not seeing any item in the *Magazine* from Dunmore, so I make my first attempt, and if worthy of publication you may hear from me again in the near future.

A fireman's wife and well wisher,

Mrs. J. W. Stuart.

EAGLE BEND, TODD CO., MINN., }
October 14, 1889. }

Editor Woman's Department:

DEAR MRS HARPER:—Another contribution for Woman's Department you will find enclosed in this letter. Though I have never seen the Debs family, nor probably ever will, Mrs. Jones has so frequently mentioned them in her letters to me, that I have a genuine regard for the entire family and am deeply interested in their welfare. The enclosed verses have been written with the earnest desire of conveying one small ray of comfort to the bereaved parents.

I was more than pleased that the bachelor of Albany received his just dues in your editorial this month. He will probably think twice before he writes again on the same subject. I would like to write more but it is now half-past ten, and I must hie to the land of dreams. With kindest regards, I am

Very truly yours,
Annie B. Miller.

To Mrs. and Mr. Mailloux on the death of their only child, with the Author's sincere sympathy.

The angels loved to linger near this bright and precious child,
And longed to hear him, to their home, so far above the skies.
If God would only grant, their much desired request,
And suffer them to take this prize to mingle with the blest,

He would add a greater lustre, to the Saviour's starry crown,
No brighter gem would in that royal diadem be found,
Stainless and pure as those who circle round the throne,
Ready to join the white-robed throng in God's eternal home.

So He who ordereth all things well, Father of love and might,
Sent messengers to guide his soul up to the realms of light,
Triumphantly they bore their charge on snowy wings of love,
And laid their trophy safely down at Jesus' feet above.

But what of mother, father, did God not heed their prayer,
When pleading that their darling's life in mercy he might spare?
The aching heart, the falling tear, the sigh of deep distress,
Escapes not His all-seeing eye, He knows our sorrows best.

The sunshine of your home is gone, now shadows lugr near,
No more the sound of your baby's voice, shall joyfully greet your ear,
But lonely hearts, look up, though death has left a sting,
The Sun of Righteousness appears with healing in His wings.

Mrs. C. S. Miller.

FORT WORTH, TEXAS, OCT. 15, 1889.

Editor Woman's Department:

Engineer I. M. Dean, Master of Trinity Lodge, No. 83, opened his eyes this morning to the fact that he was the father of a beautiful girl babe. For a moment he was inclined to take the feminine news a little to heart, but like a true rail-

roader who is determined to make the best of everything he soon rallied and began spinning 'round as he remembered that he was the only one of all his mother's boys who had ever *had* a girl.

Mrs. Dean and the little girl are doing finely, but fears are entertained that the father is too funny. Any way, I am even with him now.

October is here with bright wreaths of chrysanthemums, golden sunshine and red and russet colors. The beautiful golden Indian summer days that we are having now put new life into every one and make happy hearts and bounding pulses. The autumn of the year is always beautiful to me. The harvest time when we see the return for all the labor expended by the farmer on his crops; when the merchant who has trusted his goods to others is rewarded at last; when the honest farmer who has made abundance and to spare comes to repay his bills; when railroad traffic is greater than at any time during the year as they take out the harvest and bring in the merchandise. At least that is how we find it here where we have no factories. Almost all our raw material is shipped abroad to be returned probably again in a different form but this is fast becoming an old way, and every day new enterprises are fast being opened up and soon Fort Worth will be known far and wide as a manufacturing center. Every day prospectors are crowding her hotels looking for profitable investments, and it will not be always until our beautiful State will manufacture her own material.

To-day comes the sad news of the death of Engineer Bible, Fireman Charley Jones and Brakeman A. T. Mansfield, caused by a wreck and washout on the Texas & Pacific near Sierra Blanca, Texas. They were well known in Fort Worth, had many friends here among the members of different lodges, who regret very much to hear of their death, but mourn not as those who have no hope, for they were all known to be upright, earnest men, loyal and true. As their lives were lived here, so will be their reward in the great Hereafter, where our motives and not our deeds are known and rewarded. May we all so live that the messenger will find us ready.

Mrs. Harper has been filling up our space with such beautiful selections that I feel like I am depriving you of something better than my idle thoughts, therefore, will close for the present. Wishing you all an abundant harvest from your year's labors and a pleasant restful winter after the work is done.

Irene.

THAT kind and clever woman, Mrs. Frances D. Gage, who was one of the earliest pioneers in the woman suffrage cause, once said to us, "I don't know as I should have any objection to that theory of the relation of the sexes which is typified by the vine and the oak if the vines all had oaks to twine on. But when so many of them have nothing to cling to but tobacco plants and whiskey barrels, I can't help thinking they would do better to learn to stand up."

Correspondence must in all cases be brief and to the point.

Subscriptions must begin with the January, April, July or October number and expire with the year.

Changes of Address of subscribers should be reported to us promptly to insure the safe delivery of the book.

Subscribers failing to receive their Magazine will please notify us, giving name and location of Agent to whom they subscribed.

Matter for Publication should be written on one side of the paper only, in a clear, legible hand, and all letters relating to the Magazine should be directed to

LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

DECEMBER, 1889.

MAGAZINE PRIZES FOR 1890.

In our advertising department will be found a standing advertisement, to which we call the special attention of all our *Magazine Agents*. Nor is this all, we ask that every member of our Brotherhood shall feel a deep and vital interest in increasing the subscription list of the *Magazine*.

We offer two splendid prizes for Vol. XIV, 1890—an elegant Piano and a handsome Gold Watch. The first prize for the *largest number*, and the second prize for the next largest number of *paid subscriptions* on the books of the Grand Lodge December 1st, 1890.

The question arises, who shall have the prizes? We can answer now. The agents who are the most zealous, the most active, the most determined, the most indomitable, the most indefatigable; they will win the prizes. Supineness will not win the *piano* nor the *gold watch*. Zeal, ambition, resolution, *get up and go*, snap, energy, are the qualities that have won all the dazzling prizes that have tempted man to work and win since the world began. Indolence never won anything but *rags* and poverty.

But we are not addressing sluggish and slothful men. The men selected by the Lodges to be *Magazine Agents* were not asked to accept the position because of their trepidity and feebleness; but, on the contrary, because they were men capable of appreciating the merits of the *Magazine*, and had the ability, mental and physical, to extend its circulation and promote its interests, and therefore the interests of the Order.

But it never was understood that because a Lodge had a *Magazine Agent* that all the responsibility of extending its circulation and in advancing its fortunes devolved upon him. The *Magazine* belongs to the Brother-

hood. Its aim, its ambition, its mission is to build up the Brotherhood, broaden its influence, increase its membership, advocate its interests, fight its battles, and do all other things within the sphere assigned it to promote its welfare. This being true, every Brotherhood fireman, in working for the *Magazine*, works for the Order it represents, works for himself and for his brethren.

We now have *four hundred and four Magazine Agents*—a small army of workers—but a powerful array if united and determined to push forward the fortunes of the *Magazine*, but then a large army of Brotherhood firemen ready and willing to help them. To arouse this army to do its best, may require work on the part of those who are always on the alert, who go ahead when others hesitate, who are not discouraged by obstacles, who hurl them aside or go over them, and upon these *avant couriers*, these path-finders, and their name is legion, and every Lodge has them, we call to take a bold stand for the *Magazine*. We ask them to aid the *Magazine Agents* by word and deed. We ask them to discuss the interests of the *Magazine* in the lodge-room, in the cab, at home and on the street, in social circles, and invite men to subscribe—and women, too.

You have neighbors, friends, scores of them whom, if you induce to subscribe, will feel under lasting obligations to you. Nor need you hesitate to ask the officials on your divisions to subscribe. If they take the *Magazine* and read it, the Brotherhood will stand higher in their estimation. No one, who reads the *Magazine*, will ever demand a return of his money; he will, on the contrary, admit that it was a good investment, and pays large dividends.

Now then, Brothers, will you take hold of this work? We will believe, till convinced to the contrary, that you answer affirmatively. We will not doubt your fidelity. We have been in too many battles to doubt. We have answered too many bugle calls to arms to permit distrust now. Then, brothers, here is a long pull, a strong pull, and a pull all together for the *Magazine*, and when the time comes to record results, you shall know that your efforts achieved success.

••

WILL Editor Debs come home to us now, from the wave-washed shores of Maine? The boys in your absence have built in your book, "four soda engines again."—*The Frog*.

From the wave-beaten shores of far away Maine, where the storm-god makes old ocean sing; when he touches its keys there's a grand refrain, and the songs go upward on invisible wing. Editor Debs is again at his post, as good as new, i. e., almost. With vacation ended and no more *incog*, sends greetings to his friend, *The Frog*.

FACTS vs. FACTION IN MATTERS OF FEDERATION.

Among the sovereign rights so dear to the average citizen, the right to kick, is proclaimed vociferously and guarded with eternal vigilance. It were useless to object. Some men are built that way. They permit their dislikes, of which they are always blest with an abundant store, to rule their thoughts and actions. In writing this article, we are required to deal with men who belong to the fault-finding school of philosophy.

It is not a pleasant task, and we engage in it from a sense of duty to the Brotherhood of Locomotive Firemen. We write for the purpose of defending against misrepresentation the laws of the Brotherhood. Our motive is to correct misapprehensions, to state facts, dignify law and rebuke faction.

Let it be understood that the great body of the Brotherhood of Locomotive Firemen are loyal to the laws of the Order. They are not factionists. If a law is injudicious there is a lawful way for its repeal or modification. This fact is recognized. The Brotherhood will not abandon it, will not swerve from it, will not violate it. Why? Because such a course of action would enthrone anarchy and produce chaos. It would destroy the Order; shiver it as effectually as a cyclone scatters to the four winds of heaven a hay stack or a shanty. These remarks are preliminary to the introduction of a most singular and extraordinary document gotten up by the General Board of Adjustment of the Union Pacific system, as follows:

OFFICE OF GENERAL BOARD OF ADJUSTMENT,
UNION PACIFIC SYSTEM, BROTHERHOOD OF
LOCOMOTIVE FIREMEN,
POCATELLO, IDAHO, October 20, 1889.

F. P. Sargent and E. V. Debs, G. M. and G. S. and
T. B. of L. F.:

DEAR SIRS AND BROTHERS:—By unanimous vote of the General Board of Adjustment of the Union Pacific System, we are authorized to address you the following communication:

¶ 1. We, the *Brotherhood Firemen* of the Union Pacific System, in annual session assembled, having exhaustively discussed the merits and demerits of the Constitution and By-Laws adopted by the "Supreme Council of the United Order of Railway Employes," do hereby, *wholly and without reserve*, condemn the action of our *Grand Officers* in attaching their signature and the *great seal of our organization* to any such document, for the reasons herein set forth in detail.

¶ 2. There was adopted at the Atlanta Convention one year ago a plan of Federation that was heartily commended by our Order throughout the country for its wise, conservative, yet determined policy.

¶ 3. That plan, sent broadcast over the land and bearing the approval of the highest Court of Appeals of the Brotherhood of Locomotive Firemen, provided, in its opening clause, for the establishment of a Federal Board on every system of railways within the confines of North America, thus providing for a system of *home rule* in each system of railways, and in this way guaranteeing to the men most directly interested the soundness of a controlling voice in their own affairs and still subverting holding in check their radical tendencies by the creation of a

Grand, or General Federal Board, whose decisions, in all cases, should be final.

¶ 4. This, we believe to be, an able and nobly planned document, and on that basis we propose to stand until said document is repealed by our National Convention.

¶ 5. Furthermore, if we understand the proceedings of our last Biennial Convention, our Grand Officers were appointed a committee of three, to meet with the representatives of any other organization in railway service for the purpose of perfecting the plan of Federation and putting it into practical working order, but *confining their action to methods in conformity with the expressed will of the Convention*.

¶ 6. We believe that certain Sections of the Constitution of the "Supreme Council" is in direct opposition to the wording and intent of the plan of Federation emanating from our Convention.

¶ 7. As we understand Section 14 of the Constitution of the Supreme Council, said Section abridges in a very material degree the first prerogative of American citizenship. We believe that any body of men have the inalienable right to form any combination in their power, and resort to any lawful means to preserve their integrity and manhood, and to procure their just share of the wealth they create, even though the desired end cannot be attained without resort to a combined strike.

¶ 8. The right to go into such strike we maintain at all times, forgetting only, by so doing, the financial support of our Brotherhood at large, and, failing to find anything in our Constitution or Ritual forbidding such action, we deny the right of the Supreme Council to inflict any punishment for this supposed offence, as provided and set forth in Section 14, previously referred to.

¶ 9. Section 16 provides a method for the Supreme Council to vote for or against the approval of a strike, and, contrary to all precedents, contrary to all the laws or methods known to the government of nations, organizations or men in any part of the civilized world, the minority overrules the will of the majority, and in an organization now composed of nine men, any two members from either organization can overrule the will of the remaining seven.

¶ 10. Section 19 empowers the three Chief Executives to declare a strike at an end, and in the event of their failure to agree, said section gives to any two members of either organization the power to declare said strike off.

¶ 11. This policy, we believe, leaves a broad opening for bribery and treachery, and furthermore, that Sections 16 and 19 establishes at the head of free and progressive Labor Organizations a despotic and absolute monarchy.

¶ 12. Section 20, in providing for the admission of other organizations into the Supreme Council, uses the term "National Railway Organizations."

¶ 13. We infer from this that the Knights of Labor are excluded. We are well aware that such was not the intention of our last Convention, as this Order was expressly mentioned with the others.

¶ 14. We realize further that the Brotherhood of Locomotive Firemen has for years condemned the policy of ostracism practiced by the Brotherhood of Locomotive Engineers, and it certainly ill befits us to adopt the same policy toward any other organization, more particularly one that has been our friend in times of the sorest need.

¶ 15. We, as members of a hitherto progressive organization, believe that the success and prosperity of workmen generally rests solely on the broad platform of *mutual equality*, and on this platform we propose to stand or fall.

¶ 16. In conclusion we wish to say, that in our opinion, and with evidence at hand to abundantly substantiate the same, the policy adopted by the Supreme Council tends, in every essential particular, to widen the breach between organized labor rather than draw them closer together, and that it has placed so far beyond the

reach of the rank and file the final Court of Appeals as to appear in its obscurity like a powerful Throne, conceived in the minds of men for the glorification of the minority rather than for the emancipation of the majority.

¶ 17. Honoring and respecting the earnest convictions of all true Brotherhood men, and being open to conviction, if in the wrong, we earnestly ask you, our Grand Officers, to visit this System at your earliest convenience.

¶ 18. But until we are so convinced of the error of our view, we beg to say that, until by action of some future convention our position becomes untenable, we feel justified in acting on the plan of *Federation adopted at Atlanta*.

¶ 19. By authority duly vested in us by every Lodge on this System, we hereby attach our signatures and the official seal of the Brotherhood on the Union Pacific System.

Fraternally yours,

JACKSON HOOVER, Chairman.

FRANK WALTON Sec. and Treas.

We assume that it is needless to ask Brotherhood firemen throughout the entire jurisdiction to read the document.

That our members may be as little confused as possible, we have divided the document into nineteen paragraphs, and shall deal with such of them as we regard worthy of notice.

To begin, we ask the attention of our members to the fact that the document is addressed to only two of the Grand Officers of the Brotherhood. Why is the name of Bro. Hannahan, Vice Grand Master, omitted? Bro. Hannahan is a member of the "Supreme Council," and gave its acts his unqualified support. How does it happen, and why does it happen, that he is omitted?

In paragraph one we have: "We the Brotherhood Firemen of the Union Pacific System." To put it mildly, that is a mistake. The document does not, as its purports to do, speak for the entire body of Brotherhood firemen on the Union Pacific system, as letters in our possession, abundantly prove. It does not voice the honest sentiments of all these men. The document, signed, sealed and delivered, says the "General Board of Adjustment," without reserve condemn the action of our Grand Officers in attaching their signatures and the great seal of our organization to "the Constitution and By-Laws adopted by the Supreme Council." It will be observed that the "General Board of Adjustment of the Union Pacific System," charges, arraigns, tries and condemns the "Grand Officers" of the B. of L. F. without notice, without a hearing and without an opportunity to make any explanation or defense whatever. This done, with astounding effrontery, in paragraph fourteen, it asks the condemned "Grand Officers to visit this system at your (their) earliest convenience." Why not ask them before condemnation? Did this great, and "General Board" expect the "Grand Officers" would crawl into their presence, and humbly plead for pardon, for having, to the letter, obeyed the mandates of the Brotherhood?

It seems not to have occurred to the "Gen-

eral Board of Adjustment," that the Brotherhood of Locomotive Firemen, has a "Grand Executive Board," clothed with authority to deal with its Grand Officers, should they at any time merit condemnation. Would it not have been well for the "General Board of Adjustment" to have acquainted themselves with this fact, before assuming to play informer, spotter, jury and judge, and issuing their ridiculous but innocent ukase?

Paragraphs two and three might be called the Siamese twins—because, combined, they are a curiosity, if not a monstrosity. They exhibit the "General Board of Adjustment," quoting law to its everlasting confusion. The "General Board of Adjustment" refers to a "plan of federation" adopted by the Atlanta Convention, that was heartily commended, etc. We note the "approval of the highest court of appeal," etc., the establishment of a "Federal Board," etc., the "home rule" idea, etc., "holding in check radical tendencies," etc., and we notice particularly that after all the "General Board of Adjustment" refers to "THE CREATION OF A GRAND OR GENERAL BOARD, WHOSE DECISION IN ALL CASES SHOULD BE FINAL." The quotation we have capitalized completely upsets the wicked work of the "General Board of Adjustment," and makes it eminently fitting for us to quote the following action of the Atlanta Convention in regard to the matter. On page 351 of the Journal of Proceedings of the first Biennial Convention, will be found the following:

"Motion: that the committee having the matter of federation in hand be given full power to act in all things necessary to effect federation with the several organizations named, and that they have authority to make such concessions and modifications in the federation laws adopted by this body as may be required to secure the approval of the other organizations. Carried.

The motion we have quoted, (italicizing certain words that they may arrest attention) gave to the committee, (the Grand Master, Vice Grand Master and Grand Secretary and Treasurer) authority to do just what they have done, and for doing which, in conformity to the letter and the spirit of the action of the Brotherhood, the "General Board of Adjustment," without authority, without the shadow of authority, assumes authority, and "wholly and without reserve condemn the action of our Grand Officers. Could blind faction do more? Is it not an exhibition of inconsiderate, vaunting and vain ambition? What we have said ought to suffice, but our task is not done. Reference to paragraph four is demanded. "The ably and nobly planned document" is doubtless intended as a compliment to the "preamble," which is entirely agreeable to us. It denounces "conspiracy" with its "eye of avarice" and which "devises corporations like a cyclop." When

"the epidemic of a pestilence" which is likened to a "conspiracy" is on the "march," the Brotherhood of Locomotive Firemen should be on its guard.

Reference is made to the "constitution of our country" and "to the magnificent principles upon which our government is founded." When the Union was formed, under the constitution of the country, the states surrendered the right and the power to "declare war." The constitution provides that Congress shall "declare war" when war is to be declared. It is the same idea that is incorporated in the constitution of the federated bodies—the organizations surrender the right to strike, and delegate that power to the "Supreme Council."

In paragraph four the "General Board of Adjustment" says, "Furthermore, if we understand," etc. Manifestly, the "G. B. A." did not consider the "motion" of the convention which empowered the committee to make "concessions and modifications in the federation laws adopted" by the convention. This authority was conferred to "secure the approval of the other organizations," and without such authority, federation could never have been secured, and the B. of L. F. would to-day stand alone. But as it is, three great orders are in line, and others are coming. The Brotherhood of Brakemen, and the Association of Switchmen, conferred upon committees the same high authority to secure federation, as the Atlanta Convention conferred upon its committee, and as a result, federation exists.

In paragraph 7 we are treated to a dissertation on the "prerogatives of American citizenship." Just here, please recall the splendid eulogy on "federal government." The Constitution abridged the rights and prerogatives of the colonies. When they came into the Union they surrendered the right to "declare war," "enter in any alliance," "coin money," etc. The State stands for the citizens thereof. The "General Board of Adjustment," before assuming to define the prerogatives of citizens, should have read the Constitution of their country, Art. 1, Section 9. And yet, if the firemen, engineers, brakemen, switchmen, etc., on the Union Pacific system desire to federate, they can do so. The "Supreme Council" has not abridged their "prerogatives." If they want to strike, they can do that. The Supreme Council has no authority to interfere. But if they do strike the federated organizations will not foot the bills unless the Supreme Council, acting under its own constitution, declares the strike a righteous strike; and that is all there is in paragraph 7, and paragraph 8 is of the same tenor.

And right here it should be said that federation contemplates, as far as possible, to do away with strikes. A strike is war, and war is a calamity. We say this with a full

understanding that strikes are sometimes inevitable, but firemen know, and all workmen know, that if possible they should be avoided. The purpose of federation was to find, as far as the mental powers of the federated organizations could aid them, a remedy for strikes; not to condone wrong and injustice, degradation and dishonor, but to find ways and means right and honorable to reduce their number, to put an end, as far as possible, to the sacrifices inseparable from strikes and all their attendant woes, and to make certain, when a strike was right and inevitable, to make it short and decisive.

We now come to paragraph 9, in which the Supreme Council is arraigned on the "majority" and minority question. It looms up in the imagination of the "G. B. A." as something worse than "conspiracy," with its "eye of avarice, devouring corporations like a cyclop." Referring again to the "preamble" for inspiration as it glorifies our system of Government, we want to state some things that are tolerated, because nothing better has been discovered in governmental affairs. We do not expect to convince the "G. B. A." of the U. P. system, and still, it may give that august body something to think about. We ask, is a minority rule more objectionable than the one man rule? In any case wherein life or liberty is involved on a jury one man's vote absolutely renders null and void the votes of eleven men. Come to the order of which the "G. B. A." is connected, and contemplate the power conferred upon one man, the Grand Master, when presiding over the deliberations of a Biennial Convention. Who can speak until recognized by the presiding officer? "The constitution of our country" vests in the President, in many instances, the *one man* power—far greater power it is claimed, than is wielded by the Queen of England and Empress of India—and yet, the "G. B. A." of the U. P. thunders its anathemas upon the "Supreme Council," because a minority may prevent a strike and the untold ills which strikes inflict—brought about often because, as the "G. B. A." of the U. P. intimates by the "radical tendencies" of some men. It will be observed by reading Section 10 of the laws of the Brotherhood relating to the "Protective Department," that it is said that "in the event of a strike the Grand Master shall be the recognized leader and shall have the authority to *command the entire resources of the Protective Department.*" Here again, by the laws of our own Order, we enthrone one man and clothe him with supreme power, and yet, the "G. B. A." of the U. P. discloses its lack of information by the sweeping assertion that the fact that a minority being clothed with authority to prevent a strike "is contrary to all prece-

dents, contrary to all the laws or methods known to the government of nations, organizations or men in any part of the civilized world." It were supreme folly to discuss such imaginative declarations.

The "Home Rule" idea may be dismissed with the remark, that the Supreme Council in no wise interferes with the subject as the manifesto of the "G. B. A." of the U. P. fully demonstrates. It gets together and enjoys "home rule" to the uttermost limit, arraigns and condemns as pleases its fancy, and snaps its fingers in the face of precedent and propriety.

Referring to paragraph eleven, we note what is said about "bribery and treachery." No laws can provide against such baseness, such infamy, or such suspicions. Some men are corrupt, and it frequently happens that their motives, however adroitly covered up, are discovered in time to be circumvented, and as to the talk about a "despotic and absolute monarchy," it is probably sufficient to say that such governments do their utmost, when like the "G. B. A." of the U. P., they arraign, try and "condemn" their victims without a hearing.

Paragraphs twelve and thirteen, with regard to admitting organizations, require nothing in the way of comment. The surmises they contain seem to have been written for filling and stuffing, and are all provided for in the motion of the Atlanta Convention, which we have quoted.

In paragraph fifteen, the compliment paid to the Brotherhood of Locomotive Firemen is deserved. "Mutual equality" is just what the "Supreme Council" has provided for all federating organizations.

Paragraph 16 is unfortunate, except in the first sentence. It indicates "conclusion"—the end of the document, but when it gives an opinion that federation "widens the breach between organized labor," it becomes as funny as if written by Bill Nye. We confess that we do not comprehend the boldness of the figure. It seems that somehow the "final court of appeals" appears "in its obscurity like a powerful Throne" with a big T. After this the "G. B. A." of the U. P. "earnestly asks our grand officers to visit this," the U. P. system, at their "earliest convenience," and in paragraph 19 we are informed that the "G. B. A." of the U. P. "until convinced" of their "error," etc., are going to "act on the plan of federation adopted at Atlanta." If the "G. B. A." of the U. P. will honestly act on that plan, they will act right, but it must remember that the plan of federation adopted by that convention was to clothe the committee with all necessary power "to make such concessions and modifications in the federation laws of this (that) body as may be required to secure the approval of the other organizations."

The conventions of the switchmen and brakemen have fully indorsed federation, the action of the Supreme Council.

In human affairs none but fools claim perfection. No Brotherhood boasts of such infinite wisdom. Constitutions and laws provide for amendment or repeal. Federation is a new departure for railroad organizations. An earnest desire to improve upon what has been done, advocated in a spirit of building up rather than tearing down, would meet with universal approval. But open, unprovoked rebellion, open or covert threats, impotent wrath and sweeping condemnation are not the ways to deal with propositions like federation, which, when perfected as the intelligence of the federating bodies desire shall be the case, will confer untold blessings and benefits upon all concerned. Any one can destroy, but to build is the demand, and federation once perfected, like the pyramids will stand when forty centuries have come and gone.

♦♦

BOSWELL MILLER.

The advancement of Mr. Roswell Miller to the Presidency of the Chicago, Milwaukee & St. Paul system of railroads, is not so much of a compliment as a splendid reward of merit—and the term "merit" includes the entire group of virtues which go to make up the best type of the American man of affairs. The C., M. & St. P. system includes about 6,000 miles of main track, and its capital stock and bonded indebtedness amounts to \$180,272,000, and ranks as one of the greatest railroad properties in America. The men who own the property are careful who they place in charge of it. There is seldom any chance work about such promotions. Men of vast fortunes may buy such positions as titles are sometimes bought in European countries, but Mr. Miller does not belong to the millionaire class. His wealth is in brain capacity. He knows how to manage. Great problems do not disconcert him. He has the required experience. He is not only able but obliging. Elevation does not make his head dizzy. He can see an employé and estimate his worth, and do him justice. He can be great in doing what arrogant men call small things. We congratulate the stockholders and bondholders and the great army of employés upon the advancement of Mr. Miller to the Presidency of the C., M. & St. P. We believe it means prosperity and a reign of righteousness all along the line.

♦♦

THE *Frog*, which *never* was a tad-pole, comes to us enlarged, white, clean and as butchifal as a Connecticut butcherfly. The *Frog* is always newsy; it never croaks, but sings, and when it sings there is melody, you bet! It is always welcome.

JOHN LIVINGSTON AGAIN.

In the *Railway Age* of October 25th, Mr. John Livingston is out with what he calls an "amended complaint." His first complaint was against "sixty-one defendants," the "amended complaint includes 117 railway companies, comprising nearly all the principal railways in the country." The trouble is, that all of these 117 railway companies have extended, in one way or another, "free passes," or transportation at reduced rates, to their employés and their wives, or have permitted some railroad workingman, engineer, fireman, brakeman or switchman, to ride, when in search of work, upon the presentation of a "traveling card," issued by the Brotherhood, of which they were members in good standing. This is what worries John Livingston, "of the City of New York, and of Campville, Tioga county, New York, President of the Railway Shareholder's Association, an organization," etc. John Livingston is making himself notoriously ridiculous, and as conspicuously contemptible. It has been charged, that having been himself a candidate for favors in violation of law, his vindictive spirit has been aroused, and his wrath, doubtless intensified because having been snubbed when impudently offering advice that was not wanted.

John Livingston, has really surmised that he understands the Interstate Commerce law, and he further surmises that by bombarding the Interstate Commission he can knock the sense out of them and reduce them to the level which he occupies. We doubt very much if his original complaint was ever read by the Commission, and certainly, except to be satisfied that John Livingstone is a conceited ass, no one will give his amended complaint a perusal. We have not for months past entertained a doubt in regard to his malignity, but having waded through his "amended complaint" the conclusion is arrived at that he is an old shark, whose egotism has increased as his brain, if he ever had any, absorbed water. To demonstrate this, he inflicts upon the Interstate Commission four columns of solid nonpareil, and what is quite as strange, gets the mass of drivel published in the *Railway Age*. He is mad because railway employés ride free, or at reduced rates. He would have them pay regular rates or walk—and he would have the wives remain at home, rather than permit them to have a holiday with their husbands once a year, or once in two years, when they attend conventions. John Livingston has no conception of liberality and gratitude and he labors under the fool idea that the Interstate Commission, at his solicitation, will transform itself into an autocrat, and declare that Railway Companies shall adopt the venal policy which makes John Livingston the most

vindictive enemy of workingmen in the land, except, possibly, Austin Corbin, whose effigy should to be burned at every cross-road in the country. * * *

FEDERATION AN ACCOMPLISHED FACT.

Now, that three organizations of railroad employés have federated, now that federation is an accomplished fact, those who have pooh-poohed, should change their tactics. There is in federation nothing to excite derision. It is superior to flings and jeers. Here and there an ignoramus refers to federation as "amalgamation,"—which is not a synonym of federation, and refers to something entirely foreign to federation—and yet there are those who, oblivious of their stupidity, write for the public eye, and make federation and amalgamation interchangeable terms.

Federation, like all other terms which stand for important and imperishable ideas and principles, ought to be discussed upon its merits; and particularly should working men examine its claims for consideration, since it is assumed that it is designed to promote their welfare.

Let us look at this question dispassionately:

First. It is assumed that federation increases the power of the federated organizations. The proposition is too self-evident to require anything more than the statement. "But," says a croaker, "the power thus gained by federation may be used for an improper purpose." That is true, and hence it becomes important at the outset, when federation is proposed, to understand fully the object in view. The thirteen British colonies in America federated. The Declaration of Independence gives the reason why. It was to resist British oppression and establish a new nation. It is possible to conceive that the power thus secured by the federation of the colonies could have been used for vicious purposes, but no patriot would have raised his voice to cry down federation, and no patriot did raise his voice to defeat the purposes of federation.

The fact need not be obscured that the federating organizations of railroad employés believe that by federating they secure power, thereby becoming more efficient when it becomes necessary for them to exercise that power. In this connection, and just here, the query arises, possibly, how, and under what circumstances is this power to be exercised? Well, in the past, railroad employés have had grievances to adjust, and failure has led to strikes, and strikes have caused great sacrifices. Under the federated compact, no one organization can order a strike, hence the chances of strikes are reduced. It would be folly to deny this statement, because it is a fact. Trivial matters

will not produce strikes and those labor disturbances so rife in the past. Investigations will be more thorough, and the means of arriving at an amicable adjustment of difficulties being vastly more efficient, it is fair to assume, will be proportionately effective, and hence it is believed by those who have given the subject patient investigation, and whose opinions are valuable, that with federation the era of strikes virtually disappears. Thus it appears that the increased power resulting from federation is to be first employed for the amicable adjustment of grievances between employer and employé. And already it has been so employed, and results triumphantly confirm the declarations we have made.

Second. Now, it should be distinctly understood that each of the federated orders pursues the even tenor of its way, as if federation had no existence, except that should any portion of its membership desire to strike—go to war, for that is what a strike means—they can't do it. Their Brotherhood or organization, must exhaust its resources for adjustment first—and even then it cannot strike. The whole power of the federation is to be exerted to settle the difficulty. Arbitration, compromise, concession, all things honorable, and just, and manly, and of good report, are to be done that a strike may be avoided. Here the question arises, and we put it to all honorable men if this is not the judicious exercise of power? Is it not the one thing wanted in the labor affairs of the country, and particularly in railroad affairs? We do not hesitate to believe that the reply will be in the affirmative from labor organizations and from railroad officials, also.

Third. In the event of a grievance which after every effort to adjust it honorably has failed, what will be the next move of the federated organizations? The answer is that every man will quit work, from one end of the system to the other. It will be the last resort, and who is there, among all the hosts of honest laborers to hoist the banner of the scab, and aid the corporation to overthrow the federated workmen in defeat?

Fourth. The federation idea is the brotherhood idea carried forward and carried out to its logical sequence. The inter-dependence of railroad employes is so vividly self-evident that argument weakens rather than strengthens the declaration. It is a fact as irrevocable as the decrees of fate. It may not be stronger than in some other employments we might name, but it is a condition that defies the attacks of logic, and will survive the assaults of those who would keep railroad employes estranged. We do not know when all organizations of railroad employes will constitute one grand federated body, but we believe in the logic of events, and in the logic of common sense, and thus

believing we wait patiently and trustfully for the "good time coming, boys," when all the brotherhoods will fall into line under the victorious banner of federation.

.*.*

OUR MAGAZINE AGENTS.

Every Lodge of our Brotherhood has an officer known as a MAGAZINE AGENT.

The constitution imposes upon the MAGAZINE AGENT certain important and responsible duties.

The LOCOMOTIVE FIREMEN'S MAGAZINE is the property of the Brotherhood of Locomotive Firemen—of the membership. Each individual member has a property interest in the MAGAZINE.

In choosing officers for the Lodge the question of fitness arises, or ought to arise. It is not every one that is qualified to be Master of a Lodge, nor is it every one that can fill, acceptably, the office of Magazine Agent.

What is wanted in the MAGAZINE AGENT is a comprehension of the value of the MAGAZINE to the Order. He should be familiar with its contents, as it is issued, so thoroughly posted that he can recommend it. With this there should be intense zeal to build up its subscription list, thereby increasing its usefulness to the Order.

We do not hesitate to say that such MAGAZINE AGENTS would, in a short space of time, give the MAGAZINE 50,000 subscribers.

The agents of the MAGAZINE are empowered to *appoint deputies*, and we suggest that they appoint such deputies—good and true men—on each line of railroad centering at the place where their Lodge is located.

What is desired is that a *thorough* canvass shall be made, that attention shall be called to the *merits* of the MAGAZINE. It is readable and thoughtful. It keeps abreast of the army of progress. It is in demand by scores of readers who are not members of our Brotherhood. It is recognized as the best Brotherhood publication in the country, and as such it should be the pride and boast of our Order. This is said in no spirit of vain boasting. It is a fact certified to by men who are not members of our Order and who are capable of forming an intelligent opinion.

In view of such things we appeal first to our MAGAZINE AGENTS to take hold of the business of extending the circulation of the MAGAZINE with energy. Appoint deputies and infuse into them zeal to make the MAGAZINE more potent for the good of the Order.

And, now, Brothers, every one, we appeal to you. Champion the cause of your MAGAZINE. Give it some of your time, some of your leisure. Let each man make himself a committee of ONE to increase the subscription list of the MAGAZINE.

In doing this you help yourselves, you help the Brotherhood, you help the cause of labor,

help on the work of organization and of federation, help to win the battles of the Order, and to give its influence a wider sweep.

Let the good work begin at once, nor cease until the communities where you live have been thoroughly canvassed, and good results will follow.

* *

GRANTING PASSES.

We have before us an article clipped from the *Locomotive Engineer*, captioned "The Pass System." We do not believe in its logic or conclusions, but we want to comment upon some of its propositions and therefore print the article entire:

The agitation of Mr. John Livingston against the issuing of passes to anybody except Mr. John Livingston, and especially against the issuing of passes to railroad men attending conventions, shows more momentum than that usually given to the agitation of a known crank.

There is little doubt that the different railroad managers would gladly combine with any man or body of men who give reasonable promise of abating in a measure the pass nuisance, much less the abolition of it altogether.

The pass system has been abused; a case where the old proverb about riding a free horse to death has been literally carried out.

Everybody wants passes, those having the least reason for having passes want them the worst.

The Interstate Commerce Commission have attempted to restrict the issue of passes and confine their use to actual employes of the road; their efforts have been partially successful, and have given the railroad officials an excuse for refusing passes to many persons otherwise hard to refuse.

But a remedy is never a cure; poultice on the outside of the pass cancer will never bring it to a head—it must be cut out, root, limb and branch, by the knife.

If every passenger carried over our roads paid fare, the companies could make money on their passenger business at one-half the present rate per mile.

It costs just as much to haul an alderman with a pass as a human being with a ticket.

The only way to stop the pass trouble is to do away with them for any purpose—not even using them for employes in the service of the company.

If the master mechanic finds it necessary to send an engineer and fireman over the road deadhead, let him give them an order for tickets, regular tickets to be issued to them, and the mechanical department charged with them, at regular rates, on the books of the transportation department. It costs just as much to haul the engineer and fireman as it does any other two passengers.

If fares were down to one or two cents per mile, the brotherhoods could well afford to pay the fare of their delegates; then if any delegate wanted to take his wife he could pay her fare.

Most railroad employes dislike to pay fare—don't like to do it themselves—but railroad men are more than half human, anyhow, and would soon get used to doing what other people do. There is no more reason why the family of a trainman should be carried free over the road than that the trainman should make a couple of trips without pay—what a kick there would be if some official asked that.

As long as one employe gets passes, all should; the general manager has no more excuse for using the pass privilege on his own road, or in asking it from other roads, than has any section laborer. If it is wrong for one it is wrong for the other.

About the only way to cut off the pass busi-

ness is to make some such law against them as now stands against counterfeit money.

Railroad employes are not the worst pass fiends in the world. The press, the pulpit, the legislature, the bench, and all those institutions which influence the people, or are supported by the people, for the benefit of the people, are more or less influenced in favor of the roads by the use of passes, the abolition of the system would place all these where they belong—on a level with the people.

The pass system is wrong, and the ethics that it has taught is for abolishment, but a convenient evil is hard to give up.

Railroad men could but be benefited by a complete change in this direction, as it would reduce the fares they would have to pay, make the companies more prosperous, and the chances of higher pay better.

To begin, the railroads of the country never had a "pass system." There was never any regular method or order by which passes were granted or withheld. As a consequence, it has not been "abused." Railroad officials have granted passes, as a general proposition, upon the principle that such a procedure would pay. Directly or indirectly they have believed that granting a pass would prove a profitable investment. In this, there has been no "riding of a free horse to death." The horse has never been a "free" one. Persons could only ride by permission. Let us examine this pass business. Who have had passes?

1st. Railroad officials. These have been courtesies, an interchange of passes—hence nothing has been gained or lost by granting such passes.

2d. Passes have been granted to newspaper men, and newspaper men have always been in a position, in many ways to compensate the roads for such favors, sometimes by writing, and as frequently, perhaps, by keeping silent. At any rate, there has seldom been any disagreement between the newspapers and the railroads upon the score of passes—and if a balance existed, it has seldom, if ever been against the newspapers.

3d. Passes have been granted to legislators and we think the records will show that this class of recipients of passes have earned their rides.

4th. Passes have been granted to shippers, men who could, without trouble, so increase the business of a road, as to more than compensate it for the passes granted.

So far, the pass has been granted upon business principles. The *quid pro quo* has determined the granting of passes, and the railroad official has always been master of the situation, has determined for himself what ought to be done. The Interstate Commerce Commission, by its decisions relating to passes, has exercised an arbitrary power which has been productive of little if any benefit. It has added nothing to the power of railroad officials to refuse passes, and in giving them an excuse for such refusals, has been fruitful of petty discontents, and small profits. It has given such

men as John Livingston opportunities to give conspicuousness to their littleness, and bring such railroad managements as have taken their cue from him, into deserved contempt.

When the *Locomotive Engineer* says, "Everybody wants passes," it indulges in hyperbole, a figure of speech, indicative of more passion than prudence. The statistics of receipts from passengers are conclusive. At any rate the figures demonstrate that if everybody wants passes everybody don't get them by a large majority. The declaration that "everybody wants passes" prepares the way for the exaggeration that if "every passenger carried over our roads paid fare, the companies could make money on their passenger business at one-half the present rate per mile," that is to say, as many people travel on passes as there are persons who pay fare. The orders of the Interstate Commission, it is safe to say, in the matter of passes, have not solved the problem, and this the *Locomotive Engineer* admits when it says, "The only way to stop the pass trouble is to do away with them for any purpose, *not even using them for employes in the service of the company.*" We italicize a sentence that our readers may the more readily comprehend the proposed remedy for a supposed wrong, but which in the case of an employé is in the nature of a right, the suppression of which would be a wrong and an injustice of indefinite proportions. It is an easy matter to say that "the pass system is wrong," easy to say, "if fares were down to one or two cents a mile," etc., and it requires time and space to answer such affirmations and propositions. For railroad companies to grant passes to their employes is not wrong. It will not be denied that the cash system, "pay as you go," is right, but the credit system is also right, and the world's business is done on the credit system. Thousands of railroad employes, receiving small wages, work away from their homes, and to pay fare from their scanty earnings, at such times as fortune grants them a furlough to visit their families, would be rank injustice, and thus we might enumerate instances of a character indicative of a right to ride on the cars, the denial of which would make the world cry out "shame!" Railroad employes are appreciative of kindness, and those of them who are engaged in departments of transportation, are in position, when their gratitude is aroused and active, in ten thousand ways, to compensate the roads for every act of courtesy. Fortunately the roads, as a general thing appreciate this fidelity, and passes are granted, and the roads are the gainers. That passes have been granted when they should have been withheld is doubtless true, but the remedy does not lie in the direction of totally abolishing passes.

For the Magazine.

ELI, ELI, LAMA SALACTHANI?

From whom that agonizing cry?
That sounded from Golgotha's height—
It pierced the very throne on high,
And reached the lowest depths of night.

It was the God man's dying moan,
That on the cross did bleed and die,
'Twas our sins made Him sigh and groan,
'Twas our sins caused that bitter cry.

Upon Himself our debt He took,
His Father's face was turned away—
For purity can never brook
To look upon iniquity.

The scourge, the thorns, the cross, the spear,
All these combined and ten times more,
Were naught, as loss of Father dear.
'Twas this that pierced His heart's core.

Edward Splains.

* *

PLUCK AND PERSEVERANCE.

In a recent number of the *New York Mechanical News*, we find the following which so forcibly illustrates what pluck and perseverance can accomplish, that we transfer the article to our columns in full:

The following is one of the traditions of a manufacturing firm in Glasgow, Scotland. Thirty years ago, a barefoot, ragged urchin presented himself before the desk of the principal partner and asked for work as an errand boy.

"There's a deal o' running to be done," said Mr. Blank, jestingly, affecting a broad Scotch accent. "Your first qualification will be a pair o' shoon."

The boy, with a grave nod, disappeared. He lived by doing odd jobs in the market and slept under the stalls. Two months passed before he had saved money enough to buy the shoes. Then he presented himself Mr. Blank one morning, and held out a package.

"I have the shoon, sir," he said quietly.

"Oh!" Mr. Blank with difficulty recalled the circumstances. "You want a place? Not in those rags, my lad. You would disgrace the house."

The boy hesitated for a moment and then went out without a word. Six months passed before he returned, decently clothed in coarse but new garments. Mr. Blank's interest was roused. For the first time he looked at the boy attentively. His thin, bloodless face showed that he had stinted himself of food for months in order to buy those clothes. The manufacturer now questioned the boy carefully, and found to his regret that he could neither read nor write.

"It is necessary that you should do both before we could employ you in carrying home packages," he said. "We have no place for you."

The lad's face grew paler, but without a word of complaint he disappeared. He now went into the country and found work in a stable near a night school. At the end of a year he again presented himself before Mr. Blank.

"I can read and write," he said briefly.

"I gave him the place," the employer said, years afterward, "with the conviction that in process of time he would take mine, if he made up his mind to do it. Men rise slowly in Scotch business houses, but he is our chief foreman."

There is in every department of human endeavor, instances showing that the poor and obscure, by indomitable effort, have succeeded in securing the highest rewards

which the world can bestow. It does not matter where investigation begins, it will not be long until the truth is discovered. The account that we publish however, is exceptionally apt.

The pale faced boy who lived by doing odd jobs in the market and slept under the stalls, concluded to better his condition, but he had no "shoon." Then the struggle became fierce—he must still live, and save enough to purchase the "shoon." Rejected, because in rags, he retired with his "shoon;" another battle was to be fought for clothes. Still rejected because he could neither read nor write, his pluck and perseverance was equal to the ordeal. Again he fought against adverse fortune, and after twenty months of ceaseless struggle he comes for the third time with "shoon," and clothes and with the reading and writing equipment and succeeds in securing the place of errand boy—and at last became "chief foreman," and probably the proprietor.

In such traditions there are lessons for the plucky persevering poor, and those who will study them and profit by them, may be certain to succeed.

* * *

THE *Knights of Labor*, published at Chicago, in its issue of October 19th, in "A word of advice to delegates" to the General Assembly of the Knights of Labor, to be held in Atlanta, says:

Charges have been iterated and reiterated against not only the integrity, but the honesty of the General Officers of the Knights of Labor. They have been accused of squandering the funds raised by assessing the honest workmen connected with the order for their personal benefit. They have been accused of using the funds to pay railroad and hotel expenses of their concubines. They have been accused of using these funds to defeat politicians with whom they were at war. They have been accused of using the funds for the corrupt practice of reelecting themselves General Officers. They have been accused of so many crimes against the cause of honest labor, that if only a tithe of the charges be true, they are unworthy not only to hold the positions they now hold, but to have any connection whatever with the interests of the labor movement. It may be that the charges are not true; it is your duty to find out. Go at this work intelligently and with a firm purpose not to be sidetracked by any personal feeling you may entertain for or against the General Master Workman or his accusers.

Such reading as the foregoing is not calculated to advance the cause of labor. Such charges so broadcast would make Paradise a jungle, and fill it with beasts and reptiles. That an organization, of any kind, should live a day under the weight of such accusations, true or false, is simply marvelous. Still, the Knights of Labor live, and its Grand Master Workman is maintaining his position with undaunted courage. In addition to the foregoing, the same paper says:

Among the most serious of all the serious charges that have been made, is that of all the million or more dollars that have been contributed for various purposes by the members of the order, and which have been expended under the supervision of Mr. Powderly, there has not been proper vouchers presented to any General Assembly. It is charged openly by members of the finance committee, that at no meeting of the General Assembly have vouchers, other than the bare statement of the General Officers, been presented for the expenditure of all this vast sum.

The foregoing suggests reflections relating to financial matters of the most vital consequence. To collect vast sums of money in excess of the taxing powers is corrupting—always was and always will be. We know nothing of the charges made by the *Knights of Labor*, and have no comments to make in regard to them. We take the broad ground that no labor organization should collect one dollar, nor one cent, of its members not immediately in demand to meet its obligations. Any departure from this policy will breed distrust, no matter who handles the cash. Besides, the laws of the organization should explicitly forbid the accumulation of funds beyond immediate needs. Working men have no money to create colossal funds to be invested in schemes of any kind. They need their money for their private use, and usually much more than they receive. Moreover, an organization has taken the first downward step when a suspicion arises that money collected of its members has been improperly expended. To guard against such suspicions nothing but exhaustive exhibits and honest vouchers will answer the requirements. In the absence of them suspicions will multiply in geometrical progression, nor is this to be wondered at. On the contrary, when it is shown that the collections have been to meet constitutional obligations, and that the money has been sacredly guarded—that integrity in financial matters has prevailed—that organization will outride all ordinary storms.

* * *

ELSEWHERE in the current issue of the *Magazine*, we reproduce from the *St. Paul Daily News* of October 18th, a communication from the pen of Hon. L. S. Coffin, relating to the killing of railroad employes, particularly brakemen and switchmen. The statements made by Mr. Coffin are well calculated to arouse public attention, and to emphasize the demand for such remedies as have already been devised and which should be applied. Mr. Coffin shows that in one short week 25 trainmen have been killed and 25 more crippled for life, a total of 50 in one week; equal to 2,600 in a year of 52 weeks. Of these, says Mr. Coffin, 11 were killed and 8 crippled by the old time methods of coupling cars, equal to 988 in a year of 52 weeks. The number is fearfully

great. It is believed that this "awful record" can be modified, but it is believed that it will be modified only at such a time as railway companies realize it is for their pecuniary interests to make the required changes. Mr. Coffin states that one of the most important questions in regard to the important matter of which he writes, is the "confederation" of railroad employes. In this he voices a sentiment that every rational man recognizes as a key-note, and to this it must come eventually. There are dangers which no forethought can guard against, but there are others, easily pointed out which can be avoided. Railway companies are not required to do the impossible, only the practical is demanded; and this should be done, and if this is not done, if the maiming and killing goes on without awaking a sense of responsibility on the part of railway companies, employes should bring the matter to their attention in a way that will command respect. The slaughter of men must be reduced to the minimum, and to do this, humanity scouts all reference to expense. It is needless to say that in the estimation of some men, life is cheap, but those who are in danger of being killed, should insist that their lives are above price.

* *

CAR INSPECTOR'S PROTECTIVE ASSOCIATION.

The work of organization of railroad employes goes steadily forward, and now we have the satisfaction of announcing the Car Inspector's Protective Association. The movement is in the right direction. Organization is now the watchword everywhere, and every trade and calling of wage-workers are coming together for mutual protection. We hail the organization of Car Inspectors with special pleasure, and bespeak for the new Association the most kindly consideration of the members of our brotherhood throughout its entire jurisdiction. We are anxious that the new Association shall succeed, and we appeal to Brotherhood Firemen to interest themselves in the welfare of the Association. They can talk the matter up with Car Inspectors of their localities, and in many ways be of service to those who desire information.

All applications for charters should be directed to George Scott, President, No. 433 North High street, Columbus, O.

Every Railway Employes Journal in the country should lend the Car Inspector's Association a helping hand, and we are convinced it will be done. The labor publications of the country are animated by a desire to see all working men thoroughly organized, and they are becoming a power in shaping public opinion. The *Magazine* will do what it can to help on the Car Inspector's Protective Association.

For the Magazine.

A CHRISTMAS EVE.

'Twas Christmas Eve, and o'er the slumbering earth,
All day the snow had fallen thick and fast;
And on the air came joyous sounds of mirth
From merry, jingling sleigh bells as they passed.

A little child, a girl of seven years,
Came slyly peeping through the open door,
While in her large blue eyes the glistening tears
Told all that words could ever tell, and more.

For there within the church she saw a tree
All lighted up with little candles bright;
No wonder that a sob was heard as she
Turned sadly out into the frosty night.

'Twas Christmas Eve, that mother knew full well
The mark of sorrow in her childish grace;
She understood the scalding tears that fell,
And trickled down the gauby little face.

For in the dangerous duties on the rail,
The father brave had fallen in the wreck,
And now the wife with trembling lips and pale,
Sat down in sobs and tears she could not check.

Although the cozy room was bright and warm,
Before the table sat a vacant chair;
The smiling face, the loved, familiar form
No more would shed that sacred influence there.

There is no cloud but what some cheering ray
Will struggle through; so in the darkest night
Of sorrow, sunbeams clear the mists away,
And give the soul a glimpse of morning light.

And to this mother in her hour of grief
There came the fifteen hundred dollars—gold,
Or good as gold; which brought to her relief
The needed comforts for the winter's cold.

Oh Thou, who didst the law of love ordain,
For whom resounds the cheerful Christmas
chord,
Are not such noble deeds eternal gain?
Will not that sacred charity receive reward?
STANBERRY, Mo. Geo. W. Hall.

THE COMING VICTORY.

Dinna ye hear the slogan, boys, dinna ye hear
the tramp?
Dinna ye see the light, boys, flash out from La-
bor's camp?
Dinna ye see the sun, boys, Labor's sun arise?
And flash its sacred light, boys, athwart our
darkened skies?

Whatever else befalls you, boys, keep your eyes
from growing dim,
God keep your tongues in tune boys, to sing the
sacred hymn,
For victory is coming, boys, I hear it in the
breeze,
Its glowing in the stars, boys, and blossoms in
the trees.

Labor is advancing, boys, God give its armies
nerve,
Let us stand by our flag boys, and from duty
never swerve.
For the waves and the tides, boys, are bearing us
along,
And the winds too, shall help us, boys, sing our
triumphant song.

The Right is on our side, boys, and though devils
may assail,
The Truth is on our side, boys, and the truth will
prevail;
And Justice is ours, boys, pledged to lead us on.
And will battle for our cause, boys, till victory
is won.
—Veteran.

THE BROTHERHOOD.

DECEMBER, 1889.

FORT WORTH, TEXAS, October 15, 1889.

Editor Locomotive Firemen's Magazine:

Having watched with interest the discussion going on lately in the *Magazine*, I would like to give my experience and ideas on the various questions now before the Order. For the past seven years I have been a B. of L. F. man and during that time have been in constant railway work, either as fireman, engineer, brakeman or conductor and am at present in the transportation department. Having done some traveling as well as changing positions, I have had a good chance to observe the amount of brotherly love there is shown each other by members, and their ideas and the effects of the late legislation by the Grand Lodge. In your remarks to "Pop," this month, you state that the Order is diminishing in membership; this is not a very encouraging aspect. I agree with you, that nearly all the members change their Order soon as possible after being promoted; the conundrum is, Why? and will a change in name stop this emigration? my answer is no, it will not, unless the majority of the Order extend a far more cordial and unselfish feeling and assistance to those promoted or to be promoted soon, and especially traveling brother engineers, for in nearly every case where a brother tries to get a job of running, he receives worse than no assistance from resident brothers. They seem to feel and act in every move as if he were an interloper in their community; the general tone is let him go firing; we want our turn, instead of like the B. of L. E., we will help you to get a job; and if one is running where he was promoted, and gets into a little trouble, he fights it out alone, unless he has friends in the B. of L. E. What glowing prospects does this extend to a B. of L. F. engineer to remain true to his Order? You may say this is overdrawing facts, but I assure you I have seen just such in many instances and it is occurring right at the present time, and is doing far more to recruit the B. of L. E. than the bulldozing of the engineers. Might I ask if the delinquent list is not the major cause of a decreased number of B. of L. F. men? Prepayment of dues by the quarter, and now a protective fund in addition, is causing bitter denunciations from members and increasing our expulsion for non-payment of dues. There is many a weak lodge, under heavy expense that runs their quarterly dues up to seven and eight dollars. Our ranks contain lists of married men that are in debt and this amount out of one pay, makes a great difference in the amount they can give their creditors, and to a brother traveling, or one just gone to work who is financially em-

barrassed. He must borrow from either his lodge or some friend or brother, if he can. I once asked a good brother, after introducing myself with a card, to bring my grip up to me next trip as I had just gone to work on the division west of him, and had left it where he boarded at the east end of his run. He didn't know if he would have a chance to. I had a chance to express my thanks to him and patronize an express company. Do you suppose I could have made a borrow of him to save expulsion if I had needed it? The letters and editorials lately against the B. of L. E., have stimulated its members to redouble their energies to get all the B. of L. F. engineers within their folds. If we would let them alone in the *Magazine* and do more work among our members assisted by the Grand Officers by letter and personally, when opportunity affords, it would produce more good and less antagonistic feeling and work from the B. of L. E. Bro. Lonergan's letter is dictated by bitter experience and contains solid facts and truths which any brother, who has traveled can testify to.

Yours fraternally,

Lone Star.

[We are disposed to refer briefly to some of the statements made by "Lone Star." He says: "Might I ask if the delinquent list is not the major cause of the decreased number of B. of L. F. men?"

Certainly, ask the question? and having asked it, answer this question: Of what use is a delinquent member in a lodge?

Such members expect to be carried along and maintain their good standing in the lodge, and if they get disabled, die or are killed, they expect the men who pay, who are not delinquents to foot the bills and pay their insurance policy.

In reply to all such complainings, it is only required to say, that non-delinquents maintain the *morale* of the Order—not the delinquents. When a man can't pay, when his credit is so dilapidated that he can't borrow five dollars, whatever else may be said about him, he is totally valueless as a brotherhood fireman, and his leaving the Order is not to be considered in the light of a loss, but on the contrary, as a positive gain. A worthy man, known to be industrious and honest, never wants for those who have enough confidence in him to help him in time of need.

As a matter of course, a change of name would be of no consequence to such men.

Says "Lone Star:" I agree with you that nearly all the members change their Order soon as possible after being promoted, and then propounds the conundrums—1st. Why? 2d. Will a change of name stop the emigration? and answers them both by saying "no." But "Lone Star" qualifies his reply by stating that in his travels he has found a brotherhood fireman so destitute of appreciation of brotherhood principles, that he declined to bring a "grip" to him, when

every consideration of kindness should have prompted him to respond to the request.

Unfortunately, the B. of L. F. does not sublimate every one who joins it. The same is true of other organizations. Some brotherhood firemen are selfish, narrow, unaccommodating, etc. Does "Lone Star" believe any other railroad organization can truthfully boast that all its members are etherealized, human angels, perfection, etc.? If not, why inject such conundrums into his communication?

A change of name proposes simply that a name can be had that fully responds to the condition of the brotherhood, expressing the facts of membership.

It has not been said that an act so wise and prudent, and warranted by considerations that defy the arts of sophistry, will retain in the ranks of the B. of L. F. every promoted fireman, but whether it does or not, a name that tells the truth, and meets all the requirements of conditions, should be adopted regardless of fears or favors, because it is right.—ED. MAGAZINE]

LOVELAND, IOWA, October 30, 1889.

Editor Firemen's Magazine:

The cry of railway employes is now for *Federation*, for unity and strength. But in this forward movement, as in all others, there are those who stand aloof as though they feared contamination from contact with their fellow laborers, if they should condescend to join in a movement for the benefit of their fellow workmen.

On every side of us, capital is uniting and perfecting its plans to crush organized labor to the earth, so that every obstacle in the way of wage reduction and the imposing of extra burdens on the working class may be removed.

Two orders, as yet, have made no move in this direction. One is the O. R. C., the other, the B. of L. E. Of one we expect nothing, of the other, we have reason to expect much.

An engineer is exposed to no danger that his fireman does not share. If the engineer has a grievance, nine times out of ten, it is his fireman's grievance too; and, even the tenth one is rarely an exception.

In the "Q." strike, where the two Orders were federated against the most powerful corporation in this country, a splendid fight was made, and although victory was not gained, neither did we bear defeat, and if we had had the aid of all motive men, the result would have been *victory*.

Corporations are not acquainted with the word "honor" in dealing with their men; compulsion is all they know, and federation must be the remedy for such wrongs. Let the members of the three federated orders make a personal effort to bring over outside orders and not leave the magazine to do all the work.

The firemen hope to see the engineers join us this fall; they have been asked many times to do so; but should they not, a change in the name of our Order would be advisable, and an

effort be made to have it cover the ground of both in the future.

If a change of name should create bad feelings toward us in the ranks of the B. of L. E., let me say they never spared our feelings in the so-called settlement of the "Q." strike; by their laws and the acts of every day life. Give us a change in name, if need be, and above all give us *Federation*. X. Q.

GOODLAND, KAN., October 22, 1889.

Editor Firemen's Magazine:

I notice in the October *Magazine* a communication from "Pop," asking for "a rest." I suppose "Pop" don't like to see anything in the *Magazine*, only what will please the B. of L. E. The next thing, "Pop" will want the proof sheets of the *Magazine* sent to Cleveland for the sanction of the B. of L. E.

In speaking of the feeling between the firemen and engineers, "Pop" says the wrangling all comes from the B. of L. F. And why? Because the B. of L. E. will not change its obnoxious laws, nor federate. I have yet to see a fireman who had hard feelings toward the engineers for not federating. If they think it is to their benefit not to federate, then let them stay out. In regard to the obnoxious laws of the B. of L. E., I would like to ask "Pop" how he would feel if some moneyed king should say to him: "You are not as good as I am, for you have to work for a living. Look at your hands; they are rough and calloused; you are my inferior in all things." Well, that is just what the B. of L. E. laws mean to the B. of L. F., and I think our worthy editor is right in letting them know how we feel in regard to them, for it will set the more clear-sighted engineers to thinking, and the chances are that they will have them changed, and then the two Brotherhoods will be closer together than they ever were before.

"Pop" says he thinks some of the letters are "spite work." Now, "Pop" calls the O. R. C. "scabs." I suppose he must have some ill feeling against some of the conductors, and calls them all "scabs" to get square with them. I know there are as white men in the O. R. C. as ever lived. Don't condemn all for what a few have done.

As a general thing, there is a good set of engineers on this division. I am firing for one who is a true friend to the fire-boys, and he takes as much interest in the B. of L. F. as he does in the B. of L. E., and what is our grief he makes his own. Fraternally, J. C. Quigley.

BLAIRSVILLE, PA., October 24, 1889.

Editor Firemen's Magazine:

A few words from Penn Lodge No. 392, I conjecture, will not be out of place in our *Magazine*, as the purpose is to inform the Brotherhood of its prosperity. Two of our members, Bros. W. B. Swartz, Vice Master, and R. G. Graham, Warden, formerly of No. 235, have been promoted to the right hand side. They are both competent men and worthy of the promotion.

Jno. D. Davis.

TO MRS. HENRY B. JONES.

I ne'er had an enemy yet in my life
Who'd call me ungrateful for favors bestowed,
And, Madam, when toiling through turmoil and
strife

We'll meet with a few every day on life's road.
Where'er I shall be in the future consigned,
I'll always remember in kindness your words,
How friendly you penned them! They thrilled
thro' my mind

Like the love-laden warblings of tropical birds!

I have often been told that I'm naught but a fool.
I was vain and conceited enough to suppose
The assertion came forth from an envious school,
And I ne'er let such language disturb my re-
pose

'Till I wrote about marriage, ah! then came a
pause,

A most wonderful one in my selfish career,
I began to suspect that my fees had good cause
t' driving me off with a flea in my ear.

How the ladies, all led by the Editor, sat
On the top of my head for that bellicose rhyme!
Till their weight into smithereens crushed my
old hat;

If the darlings but bore on me one at a time
I could drink in the sweets of her lips till my
breast.

Was aglow with the heat of an amorous flame;
But rich *sugar plantations* deprived me of rest.
Collectively, Madam, they brought me but
shame.

See on page eight-thirteen of this year's *Magazine*

Where a member points out a most dutiful
spouse.

There are prizes in wedlock most plain to be
seen,

If we only could find them ere taking our
vows;

And that chap with the one I have mentioned
above,

He need never complain about dry-nursing
twins,

No, nor bother his brains about moonshiny
love,

Nor a future atonement for marital sins.

Mrs. Bloom and yourself did defend me. I own,
Irene, Miss McFadden and one or two more;
But for kind words you said I'd be turned into
stone,

Petrified on a pedestal placed at death's door,
How I wish, Mrs. Jones, we were both in our
teens,

And again I'd try marriage, if you'd be but
mine;

For your heart is a prize sent to few of earth's
queens,

And my love would engulf you like something
divine.

Shandy Maguire.

LOS ANGELES, CAL., October 29, 1889.

Editor Firemen's Magazine:

It is now some three or four months since Los Angeles has been heard from, and not wishing you to think that No. 97 had gone to sleep entirely, I address you a few lines. Of course I will have to express my opinion on the leading topic among B. of L. F. men; that is, the changing of the name of the Order. My idea is, to leave it as it is, because you might look Webster and the whole world over for a new name and you could not find one more appropriate or better adapted to the majority of the class of men belonging to it. Let the old name remain as it is, for if we change it the public at large would think we had

something to be ashamed of, and seek to hide it by thus disguising it. No, Brother Debs, and brothers all over the continent, let us keep our old name. I for one am not ashamed of it. Well, enough of this, this time,

We are making great preparations for our Seventh Annual Ball, which will take place Wednesday evening, November 27th, which is Thanksgiving Eve. We will try to make it *the* ball of the season. Our Lodge is forging ahead, and we have now a membership of eighty-four, and several on the list for the goat to play football with. Bro. Ed. Whitney wields the gavel in a manner pleasing to all, and is ably assisted by Bro. J. F. Brown. Bro. Geo. C. Morton is still with us, and I think you will see him at the next convention in San Francisco. We are still anxiously waiting for Bro. Sargent, who was to have been here last April, and we would be very glad to see any of the Grand Officers, but don't expect too, now, until the convention meets in '90, and then they must pay us a visit, and if they are not entertained and treated square, then California don't know how to do it. Well, I will close now. Hoping to see this in the *Magazine*, I remain, yours truly,

W. T. Curl.

[We are inclined to suggest to Bro. Curl that those who advocate a change of name for our order are not "ashamed of the name" it now bears. No one has ever blushed when the old name was written or pronounced. A change of name to suit conditions does not involve any consciousness of wrong-doing. The B. of L. E. has had, first and last, three names. In making the changes, no feelings of shame were experienced. The suggestion that the "public at large would think that we had something to be ashamed of," is as preposterous as it is puerile. The public, large or little, one or a million, is quick to perceive the wisdom or folly of propositions, and when it is proposed to make a title express conditions, the "public at large" never expresses sentiments of contempt for such actions, nor does it assume that the purpose is to disguise something, or to play the roll of juggler; indeed, the disguise applies to the old name, since it does disguise the fact that all its members are not "firemen," though the title warrants such a conclusion.

Suppose the "public at large" should interview a brotherhood fireman who is opposed to changing the name of the order, results would be about as follows:

P. at L.—You are a member of the Brotherhood of Locomotive Firemen, I suppose?

F.—Yes.

P. at L.—Are its members all firemen?

F.—No.

P. at L.—What are the vocations of the membership?

F.—We have Firemen, Engineers, and Hostlers in our Order.

P. at L.—Are Engineers and Hostlers Firemen?

F.—No.

P. at L.—Does not the name of your Order imply that all its members are Firemen?

F.—Yes.

P. at L.—Manifestly, by your admissions, the name of your Order falls short of conveying to the public mind the character of its membership. It disguises real facts and conditions, and is misleading. Why don't you change your name to suit conditions? Why not let the name tell the truth?

F.—Well, some of us like the old name. It is a good old name; a nice old name; a great old name; a dear old name.

P. at L.—Do such statements comprise all the arguments, or the best arguments, you have to support your opposition to a change of name?

F.—That is about the size and scope of our arguments. Other arguments have been advanced, but the one that relates to the "good old name" is, I think, the strongest.

P. at L.—Well, I desire to say to you that such twaddle is not argument. It is not reason; it makes all sensible men laugh; it subjects your Order to ridicule. A name, above all things, should tell the truth. It should require no explanations. To call an engineer a fireman is not the truth. It is an unnecessary untruth. This the "public at large" at once detects, as does every unprejudiced man in your Order. To call your Brotherhood a Brotherhood of Enginemen, or a Brotherhood of the Foot board meets every requirement. It needs no explanation, and you may be assured that the "public at large," if its verdict is what you seek, will never accuse you of being ashamed of your old name, but will applaud the wisdom and courage of those of your Order who demand for it a name in consonance with the character and calling of its members.

Now, we will suppose that Brother Curl is a married man, and that the "public at large" is aware of the fact. We will suppose that Brother Curl wooed and won Miss Polly Brown, a beautiful young lady, devotedly attached to her maiden name. Brown is a "good old name," a "dear old name," a "nice old name." The wedding day comes, and Miss Brown, under changed conditions, becomes Mrs. Curl. "Not much," says Mrs. Curl. "I shall adhere to the dear old name of Brown. To change my name to Curl would make the public at large think I had something to be ashamed of, and sought to hide it by changing my name to Curl." Brother Curl says, "You are right, my dear; you are still Miss Polly Brown, just as you were before you became my dear wife, and I shall always introduce you as Miss Polly Brown. It is a dear old name. I loved it in the days of love's young dream."

The "public at large" will not indorse the stubbornness of Miss Polly Brown *alias* Mrs. Curl, and as for Curl himself, the "public at large" will everlastingly laugh at him.—ED. MAGAZINE.]

KANSAS CITY, Mo., October 15, 1889.

Editor Firemen's Magazine:

I have read "Pop," and your comments on his communication. I ask myself, who is "Pop?" Do you know him, Mr. Editor? In my travels, I have met many a "Pop," and never found one who was loyal to the B. of L. F. I do not believe "Pop" is a member of our Order. He don't talk like a Brotherhood fireman. He may be in our Order, but he cares no more for his obligations than a Hotentot. Why is he and the like of him permitted to plead the cause of the B. of L. E. in the *Firemen's Magazine*? I cannot answer the question, but the way you commented upon his slush, meets the approval of every loyal fireman in the Order.

Why don't "Pop" write his stuff and send it to the *B. of L. E. Journal*? Why make the *Magazine*, the Order of the B. of L. F., the sewer for such drivel?

If Brotherhood firemen (?) God save the mark, believe in the B. of L. E., let them go, but for heaven's sake, spare us their mutterings against the Order that is educating them.

There was never an army without a deserter, a traitor, or a spy. They are always purchasable, and the B. of L. E. has money.

The B. of L. F. can take care of itself, and don't you forget it.

The *Magazine* is meeting every demand, and the boys read it and proclaim it a "dandy."

Yours, *Left Hander.*

HOUSTON, TEX., October 27, 1889.

Editor Firemen's Magazine:

Bayou City Lodge No. 146 is doing well, and the boys are all living up to the motto of the Order. Some of them have been changed to the right side, but still stay with us. Bros. Keeler and Dunn have regular engines on the road. Dunn is one ahead of Bro. Keeler, by being "pap" of a young fireman. Bro. Moody, our Master, has quit flirting with the girls since he settled down to married life. Bro. Rabbit-foot Miller is the right man for Collector. Receiver S. H. Koehler spends his evenings with his big one-year-old boy since he got the day job in the S. P. yard. Bro. Gerber is hostler at present, and if promotion follows close attention to duty, he will get there. Bro. Monahan is off on a flying trip to see his best girl, I presume. Bro. Wynne, one of our best members, is firing. Bro. Wheeler, the "dude," is firing the pretty 637. Bro. Hoval always has a smile on his face since he got married. Bro. Scanlen ain't stuck on the 673.

I would like to mention all of them, but it would take too much space and time.

Fraternally yours,

A Runner.

WELL, I SHOULD SMILE.

MR. EDITOR:—When I meet a man who asks all about my health, And then changes the subject, and inquires about my wealth, I watch him pretty closely, and if I think him without guile— As, blandly as a zephyr say—

“Well, I should smile.”

When he asks about my family, my home and my wife, And if my mother-in-law is a lady of peace or strife, I may feel annoyed at his peculiar style. But, with the meekness of a lamb, I say—

“Well, I should smile.”

When he grows more familiar, and refers to my babes, I sometimes wish, like Dives, he was heels over head in hades— But still, in all gentleness, I pour on the “Patmos file,” And, speaking sweet as s'rghum, say—

“Well, I should smile.”

When he asks me to loan him money, five dollars, or so— I may not say it, but he reads the “no go” In my eyes, but expects all the while That I'll take out my pocket-book and say—

“Well, I should smile.”

God help us poor wanderers on life's stormy shores, When beset by the everlasting army of bores, For they are as plenty as were the frogs in the land of the Nile. And, I swear, I'll never say again—

“Well, I should smile.”

Except, should you ask, if in my resolve I am set. Then I'd reply, By the great horn spoon, you bet. But should you change the subject, my mind to beguile, In that case, I might respond—

“Well, I should smile.”

Pluto.

BOSTON, MASS., October 20, 1889.

Editor Firemen's Magazine:

I once told you that I am a reader and not a writer. Still, I am induced, occasionally, to put some of my thoughts on paper.

I have read all the numbers of the *Magazine*. I am familiar with their contents. The various departments of the *Magazine* I think are creditable to our Order. I don't like everything I read in the *Magazine*, but I am not a kicker.

I would like for the Order to have a new name, not that I dislike the present name, not that I am ashamed of it, but because facts and conditions demand it. Why not look at the matter free from prejudice? why inject into the controversy the B. of L. E.? Why not simply consider simply what our own necessities require? We consider the question of federation without being embarrassed by the B. of L. E. and subsequent events prove that we were right. If we have said, “let well enough alone.” If we had played oyster, and shut up, federation would would never have been brought forward and consummated. The world moves. Progress is the watchword. The B. of L. F. can't afford to play tortoise. It has in past won a splendid re-

noun by its advanced thought and action. Let it move onward and upward.

I have no disposition to give the *Magazine* taffy. It is not my style. I do it to old 46 occasionally on an up grade, when a “little more steam” is the demand. But the *Magazine* don't require applause from me. Still, I want to say all honor to the *Magazine*. It never says a word amiss. It has the courage to attack such men as Corbin and Livingston—the enemies of workmen and of organized labor. Our *Magazine* not only defends the B. of L. F., but it has generous words to say for every other labor organization, which does not ignore workmen and put in aristocratic style. It ought to have a circulation of 50,000 copies and could have it if brotherhood firemen would take hold of the matter in dead earnest.

I hope the *Magazine* will steadily hold on its course. It is something to have an organ that is fearless; an editor who has convictions and the courage to print them.

The present is no time for spineless men. The knock-kneed, loose-jointed tribe has had too much to do in shaping events. Corporations employ no white-livered, chicken-hearted men to manage their affairs.

Only fools suppose the battle of labor have all been fought. Its trials are in the future. Capitalists are combining, and the only and last hope of labor is federation. This the *Magazine* has championed in a way that leaves nothing to be asked for. Go ahead. The brains of the Brotherhood are with you.

Polish.

GREENVILLE, TEX., October 24, 1889.

Editor Firemen's Magazine:

Owing to the fact that any reference to No. 179 has escaped my attention for a long time, I have concluded to ask permission to say a few words to the Brotherhood through the columns of the *Magazine*. Lodge 179 is on the alert and doing good work. I hear much talk of changing the name of the Order. I, for one, do not see where we can better the Order by changing its name. We want to work for the B. of L. F., not the B. of L. E. The B. of L. E. has ignored the firemen all along. Have they helped the firemen? They have not. Look at the strike on the C., B. & Q. Did they not come to the firemen and want them to stand by the engineers? Did the B. of L. F. stay? Yes, it did. What thanks did the firemen get? I will tell you. The B. of L. E. men say they would rather have a man off of a dump to fire for them than an old fireman, for they are afraid that the old firemen will “do” them for their job. When one of the “Q” firemen gets a job of firing, it is nice for a B. of L. E. man to get him out of it. That has been done. I saw it done, and it shows what the B. of L. E. will do to the B. of L. F. After all that the B. of L. F. firemen have done for them, they would tramp the firemen under their feet. I, for one, say let the B. of L. F. stand as it now stands, and never kneel to the B. of L. E.

L. M.

Talking Sense.

MR. EDITOR:—It is a common occurrence to pick up a daily paper and read the account of some person or persons being killed or injured by handling firearms "that they did not know were loaded." I am about to monkey a little with one of these guns, and if I come to grief by injudicious handling it will be with the full knowledge that said gun is loaded clear to the muzzle.

O. F. Lonergan, writing from Atchison, Kansas, in the October *Magazine*, says: "I believe that the reasons for withdrawing from our Order by firemen who have been promoted to the position of engineers are that those men have learned by bitter experience that the fraternal feeling and idea of helping one another is a delusion, and that there are Lodges of the B. of L. F. all over the country where a traveling brother will not be recognized unless he has got money, and that his chances to go hungry are exceedingly good; and the country to-day contains a great many good firemen who have dropped out of the Order on account of their inability to pay Lodge dues for the reason they could not get work, for the firemen would not help them."

If the assertions of O. F. Lonergan are true I must be a very fortunate man. I have been a locomotive man since 1876, and have been a member of the B. of L. F. for eleven years. I have worked on seven different roads (by the way, I never was discharged yet) and have traveled the country pretty well over, from Winnipeg to New Orleans, and have met *very few* of the class of firemen O. F. Lonergan portrays to us. The kind of firemen and B. of L. F. men I happened to meet were the kind that on presenting my traveling card, took me by the hand and said: "Brother ———, I am glad to meet you. We will do all we can for you. How long do you stay in the city? Will you come and stop with me while here? How are you fixed financially? and when you are ready to leave we will get you transportation to the next terminal point." These are the kind of Brotherhood men I have met. I was introduced by a B. of L. F. man to the Master Mechanic of a certain road as a member in good standing, and one whom he thought would make a good man on the road. The Master Mechanic gave me a situation, and wanted a fireman to go right out on the road. My overclothes being in my valise in the baggage room, and no time to get them, this same Brotherhood man took his overclothes off and put them on me; then asked me how I was fixed for money to chew on at the other end of the road. At another time I was asked by a B. of L. F. man if I needed any money. As I was flying lighter than a chip hat in a blizzard, I told him so. He gave me a \$10 gold piece and said, "You know my address; when you are able send it to me." That Brotherhood man's name, with a great many more, are written on my memory in letters that time cannot erase. As to being expelled for non-payment of dues when a member is out of employment, it is all

bosh. I have been a member of three different Lodges of the B. of L. F., and all any member out of employment had to do was to notify his Lodge of this fact and the Lodge paid his dues and sent him a receipt. Brothers, let each and every one of us ask ourselves if the assertions made by O. F. Lonergan are *true?* and to those who find themselves affected with this bad disease Selfishness I would advise them to get a bottle of the famous medicine, Charity, and another bottle of medicine called Brotherly Love, take a dose of each, alternately, three times a day. This will cure most cases, and those who are not relieved by the free use of the above prescriptions should get upon some high edifice and jump off, saying to themselves, "here goes nobody."

One brother in the July and October *Magazine* says in regard to a change in the name of the Order, "Let well enough alone." I can not believe that our Brother gave this subject any consideration whatever, and gives this as his final decision. If all of our intelligent mechanics, from the time of George Stephenson, up to date, had lived with "Let well enough alone" for three months, we would have no Brotherhood of Locomotive Firemen, it would be the Brotherhood of Stage Drivers, and Brother "Let well enough alone" would be the Grand Master. If our great-grandfathers had lived by this motto, "Let well enough alone," to-day we would be cutting grain with the old-fashioned sickle, and threshing it with the flail. If "Brother Let well enough alone" was firing an engine where petroleum was used for fuel, and the hardest work he had to do in ascending a steep grade was to turn the handle of a globe valve from a quarter to a half turn would he say the inventor of the petroleum burning apparatus ought to have "Let well enough alone?" No, I think not? We have all of us heard the old proverb "Necessity is the mother of invention," but I think it should read "*Dissatisfaction* is the mother of invention." We have for years taken into the B. of L. F. young firemen and kept them until they were eligible to join the B. of L. E. and then given them up. To keep a good membership in the B. of L. F. under these circumstances is like trying to pump a barrel full of water with a stream going out through a waste pipe at the bottom of the barrel as large as the one going in at the top. Our aim should be to make an Order so far superior to any other labor organization that we can keep all of the engineers, hostlers and firemen we now have and those we make in the future. If we succeed in doing this it will be equivalent to stopping up the waste pipe in the bottom of the barrel, and we can keep a good membership and take a breathing spell at the pump handle once in a while. Some of the brothers seem to think that the B. of L. E. and that law in their constitution that the firemen so detest, has something to do with the change of name of our Order, but I can not see it in that light. The B. of L. E. have chosen the road they shall travel, also their companions, and I can not see that

any move of theirs will make any difference to us in regard to the change of name.

"One of Them," in October *Magazine* says, "Will not the engineers want to join us when they see we are gaining power?" Brother "One of Them," how thick is your head, anyhow? Read your constitution, and you will see that we care not whether a man be an Engineer, Hostler or Fireman, if he be a *white man of good principles*. If we thought we could attain what you think *possible*, every *B. of L. F. man in the land ought to vote for a change of name at once*. I have talked with all the members here, and nearly all of them say, "Give us a new name," and the only argument those who are opposed to it can give, is to "Let well enough alone," which is worse than no argument at all.

Hub City.

[We ask for the foregoing communication a careful perusal. The answer to O. F. Loneragan is overwhelming. The men who want to "let well enough alone" are attended to in royal style, and the new name question is discussed in a way to command attention. The spirit of the communication is the kind wanted, and every conclusion is logical. "Hub City" knows what he is talking about, and every word weighs a pound.—ED. MAGAZINE.]

STRATFORD, ONT., October 22, 1889.

Editor Firemen's Magazine:

A change of temperature in this latitude has doubtless influenced our worthy past Master, Bro. James Harvey, of Avon Lodge, No. 38, to enroll himself in the army of benedicts, which he did recently, capturing the hand of the accomplished, Miss E. H. Camont, of Eastwood, Ont. The marriage was solemnized in this city, after which the newly wedded couple received the hearty congratulations of a large number of friends who had assembled at the depot to see them depart on their bridal tour to eastern cities. The members of Avon Lodge desire through the *Magazine* to offer their hearty congratulations. It may be of interest to the Brotherhood to know that Bros. Robert Young and Robert McIntosh are rejoicing in the possession of heirs to their estates, a McIntosh boy, and a Young girl—and we are all proud to welcome the little strangers.

Speaking of temperature, I may remark that Bro. P. David Murray, of Avon Lodge, felt the cold while tramping out into the county of Brant recently, and remarked that "he could not endure the hardship much longer." Why not climax the situation and follow in the footsteps of Bro. James Harvey, and avoid the humiliation of having to alight from a load of straw, as was recently the case, when nearing the city of Brantford.

Bro. Alfred Sauls remarked quite seriously, "I guess I will join the secret society, known as the benedicts, and avoid the expense of having to renew the sidewalk on Market street in the city of Brantford." Bro. John Halpin will soon

have to renew the railway ties at his own expense. Better join the benedicts early, and save expense, and bringing into requisition the buck-saw, will not be so expensive as the cost of new ties. Bro. John Turner, the noted athlete, recently won the heart and hand of an estimable young lady of Western, Ont. Congratulations are in order and we tender ours in hearty earnestness. Bro. John Irwin, of Avon Lodge, can whistle "where, oh where has she gone," which is resorted to when nearing Simcoe. Continue John and Mack will reward you.

Fraternally,

38.

EL PASO, TEXAS, October 15, 1889.

Editor Firemen's Magazine:

I have been reading your *Magazine* for October I must say you send it to Mr. Corbin and his kind in good shape, but I don't think the remedy lies in that direction at all. Whenever the workingmen of the United States have brains and manhood enough to draw out from the ranks of both the Democratic and Republican parties and organize a party of their own, they can elect every officer in the United States, from a Justice of the Peace to President. They can have good laws passed for their benefit.

I don't think they are slaves to any corporation, but they are slaves to political parties, and whenever either of the dominant parties promise the workingmen that they will pass laws for their benefit, they lie, and know they are lying when they say it.

I would like to see you start this ball rolling. I think you are just the one to do it in good shape.

Very respectfully,

H. C. Enrok.

[The *Firemen's Magazine's* mission is not to build up or tear down political parties; that particular business has been confided to other publications. The statements of Bro. Enrok are doubtless true to some extent, but when workingmen interrogate candidates for law-making offices relating to judicious laws, and withhold their votes when answers are not satisfactory, it occurs to us righteous laws can be placed upon the statute books.—ED. MAGAZINE.]

For the Magazine.

FROM A FATHER TO HIS CHILD.

Be patient child, be brave and strong,
The way is rough, but 'tis not long—
For soon thy Jesus will appear,
And speak unto thee words of cheer.

Be patient child, and bear thy cross,
For heav'n's thy all—all else is dross.
May God's own mother be thy guide,
And shield thee safe on every side.

Remember, child, that God above,
Whose chastenings are all in love,
He said that "they who sow in tears,
In joy and gladness reap the ears."

And Thou, O Jesus, meek and mild,
Look down in pity on my child,
And give her faith, and virtue pure,
'Till heaven for her is made secure.

Edward Spaine.

Correcting Injurious Statements.

DENISON, TEXAS, October 16, 1889.

Editor Firemen's Magazine:

In looking through the October *Magazine* I find a piece from one of the Brothers of Red River Lodge No. 8, and I want to offer a few words of correction.

In the first place, he says, in the last year everyone seems to have lost interest in the Lodge; that there is no attendance, no system. Now, if the brother would only attend lodge, which he seldom does, he would find he was very much mistaken. In the last five or six months No. 8 has been increasing both in number and attendance, and there is quite an interest being taken in the lodge and we have some very interesting meetings. The boys have begun to see where they have made a mistake in not attending lodge more regularly, and are now coming out more promptly to the meetings and taking a deeper interest in the Order, and the members are becoming encouraged and try to attend every meeting, and No. 8 is improving very fast. Now the brother says, "If the new officers don't do their duty they will have charges preferred against them." Go to the lodge, Brother, and you will find most all of the officers present, trying to urge upon the Brothers their duty in attending the meetings. Again, he says, "We need Brother Hannahan here to stir us up." It has only been about six months since Brother Hannahan was here and explained everything to us, and advised and urged upon us to be more prompt in our attendance at meeting, and he would insure us having a good lodge. Brothers, have you followed his advice? Ask yourselves and see how it is. Again, he says, "We don't stick together there." He is mistaken. If you go to the round-house you will see the firemen grouped together, talking, and what is it about? Mostly in regard to the lodge, and how to build it up, how to get the boys out to the meetings and trying to find some plan by which to make Red River Lodge, No. 8, a success. The Brother thinks we should have two Boards of Adjustment; one for the B. of L. F. Engineers and one for the Firemen. I don't agree with the Brother. I think one is sufficient, and that the Brothers should place all confidence in them. Our Board consists of one Engineer and two Firemen, and I think they will do all that is in their power for the boys, and now, as we have a schedule on the M., K. & T. signed by the officials, I think the boys will be more satisfied when they are all placed to their right, which will be in a short time. I think our Brothers who are Engineers feel more contented to remain B. of L. F. men, as they know whom to look to for protection. Before we got our schedule, if they got into any trouble, they did not know whether the B. of L. E. would help them out or not. Now we have an article in our schedule that says, "the B. of L. F. Engineers will be protected by the B. of L. F." and I think it one of the best articles in our schedule because it makes the B. of L. F. independent, and can now fight its own battles through the troubles of

any of its members, and still the Brother has to tell that No. 8 is as poor as church mouse, but he don't tell why, so I will. The reason is that No. 8 has been too liberal. That is why No. 8 has so very little money in her treasury, but I am glad to say she don't owe a cent.

Now I hope that the next time the Brother writes for No. 8 he will not tell all her faults and speak no word of praise, as he has done this time. It makes a very poor showing for Red River Lodge, and she does not deserve so bad a name as the Brother has tried to make out, and I was very much surprised to read it. I presume that the readers of the *Magazine* must have a very poor opinion of No. 8 after reading that article, which we don't want them to have.

Now, I don't want the Brother to be offended for my correcting him, for, as he says, we have a large membership, and should have one of the best Lodges in the country, and we intend to make No. 8 one of the best of Lodges, and one that when a visitor calls to see us, he can go away and say that he was surprised to see the way in which No. 8 is conducted, and that great interest was taken in its meetings and its welfare. A Member.

[The foregoing communication is written in the right spirit, and we heartily commend it to every croaking member of the Order. It seems that Red River Lodge, No. 8, comprehends conditions and needs, and is striving in earnest to achieve success. To do this, meetings of the Lodge should be punctually attended when circumstances permit. This done, we venture to say, prosperity and harmony will make the Lodge all that could be desired.—ED. MAGAZINE.]

LINKS.

This is to every man who thinks:—

"A Brotherhood's a chain of links,
And every link a brother."

An adverse pull may make it shake,
But there's no pull that chain can break,
Each link supports the other.

Yet, as when hanging some huge weight,

The chances oft are very great,

And worth consideration;

One chain, finding the strain too tight,

May call to others "lets unite

And join, in Federation."

Prevention, is the better part,

Cure often makes the patient smart,

While giving him a lesson;

The Fireman, Brakeman, Switchman all,

Together they must stand or fall,

Make, or receive, concession.

We scorn our mates in trouble's day,

To shun, and take that easy way,

Of "strictly neutral" order;

The B. L. E.'s promised support,

After the Quincy Battle fought,

Was held in piecrust border.

Some day, the Railway order kite,

After some glorious upward flight,

May add another quarter;

Perhaps at Denver, who can tell,

The "other brothers" may think well;

And join us as they ought'er.

B. L. F.

A Plea for the Bachelors.

MR. EDITOR:—In reply to the first article in the Woman's Department of the *Firemen's Magazine* (October number) I would say that the writer makes a broad sweep, making not even the feeblest apology for the men who are living single lives with the noblest reasons for doing so. The writer undoubtedly has traveled little or none at all. Had she known more of the world she would have had a better knowledge of the environments by which some men are surrounded until the sweet privilege of choice is not left to them. When it comes to severe tests, where we must either sacrifice our dearest wishes or our sense of manly principle, duty and honor, I think the man gives up his own dear wishes for the comfort of others is deserving of a little more charity than that expressed in the latter part of the aforementioned article. She knows nothing of the hundreds of boys who are toiling and sweating night and day, in storms, heat and cold and in the most dangerous business men ever can engage in. How nice this would all be were it the consummation of long cherished hopes. The very hardships we endure would seem as pleasure. Many of us know (I, at least, do) where every dollar must go before we get it, or suffer our standard of manhood to go bankrupt. I like little children as well as any one, and I think no one has greater esteem for a lady than I have. I have a good supply on hand at the present time for whom I must provide food, clothes and shelter. The lady is not my wife, nor am I responsible for the children being here. All this self-sacrifice is quite enough for one poor devil to make without being classed as an "encumbrance on the face of the earth," and that too, by some thoughtless person who has not given the great scope embraced in the subject one serious thought. She has been quite liberal in sparing our feelings. She did not say we were an encumbrance on the face of the earth. She has very kindly placed us one remove from that. A degree is but a small remove. I would most as soon be spit upon and drowned, as to be spit upon at all. I am sure there are thousands of men who, if toiling and sacrificing for the welfare of others count for anything, are deserving of as grand a monument as ever graced a hero's grave. It is not at all likely that they will all get the monument, but if they get their dues in the great Hereafter I feel sure they will be adorned with a pair of wings longer than a sand-hill crane's, and a crown taller than Susan B. Anthony's night cap. A man should have some pride and not be fool enough to marry the first woman he finds willing to assume risks with him. If he has been able to save of his means enough to start in life, well and good, let him do so by all means. Many marriages are made with cheering prospects of the dug-out, the shanty or the boarding house being as near as they will ever get to a home. We have too many such striking cases of double blessedness without encouraging more. In one poor, little Circuit Court back in Illinois from where I re-

ceive a weekly paper, there are seven such pairs clamoring for divorce. One mystery, I presume, will remain forever unsolved, viz.: the more inferior and common the people, the more incumbent they appear to think it upon them to people the world.

I have often been asked why I did not get married. I am sure if my friends knew how cruel such questions were they would not ask them. Until we know how a man is situated in life, we have no right to censure or slur him on such matters. If my dear sister has not seen enough in this to tell her that there is one bachelor, at least, who is such very much against his will, I am at a loss to know how I shall make it plainer. Probably I want to marry worse than she does. In that I hope she is more fortunate than I, for as I look through my spy glass away into the dim future for that hoped for event, and then cast a glance at the network that blinds me I am compelled to say "impossible."

Fireman.

MONCTON, N. B., October 28, 1899.

Editor *Firemen's Magazine*:

Please grant me the space in your valuable *Magazine* to say a few words about certain things. In October number of your *Magazine* I notice a letter signed "Pop," of which, Mr. Editor, I am sorry to see it was headed Moncton, and that he claims to be a member of the B. of L. F. "Pop" says that we should take a "tumble to ourselves and stand up for the B. of L. E. If it has used us wrong in times past it does not behoove us to use them wrong now, for two wrongs will never make a right." Mr. Editor, I am glad to see that "Pop" admits that the B. of L. E. has wronged us, but I defy "Pop," or any other man, to show me when or where the B. of L. F. has ever wronged the B. of L. E. We have only given them the truth; and I say that when a body of men make laws like such as the B. of L. E. has made in regard to the firemen, they deserve censuring for it, and I, for one, am not going to "take a tumble" and shut up, because I say that no true B. of L. F. brother is built that way. "Pop" says that the great majority of our members who have been promoted have stayed with us, and are going to stay. "Pop" can't be taken for an example when he is talking that way, for we have lost several who have left us with the intention of joining the B. of L. E., but still, Mr. Editor, I believe we have a few who will never leave the lodge of their babyhood, and let "Pop" remember, that steam is wasted when once blown through the "Pop."

I am in favor of this change of name. Let us have "the Brotherhood of the Footboard, which I think covers all classes involved.

Our Collector, Brother W. H. Gay, has taken unto himself a "better half." The boys all smoke and offer congratulations. The prospects are for lots of them kind of tricks before the winter is over. We lay back and say nothing, but wait for the cigars. Fraternally yours,

Patent Ash Pan.

CHICAGO, October 20, 1889.

Editor Firemen's Magazine:

This is the first time I ever attempted to write a letter to our *Magazine*, and I don't know how I will come out. I suppose I will be called a kicker—one who wants to make hard feelings—but those who know me best, and have known me the longest, will give a different character from that. I take the *Magazine*, and what is more, I read it. If I didn't like it I would say so, or I would tell the Editor to stop it. But I do like it, and that is one of the reasons why I write this letter. I like what the Editor writes on subjects that bear on the good of the Order. I like the way our book has poured hot shot into old Corbin and John Livingston. I have always been pleased with what the Editor has had to say about federation and a new name. I read other papers besides the *Magazine*, but I don't remember seeing anything against federation, but much has been said against a new name for our Order. Now I don't object to opposition to a new name. Every brother has a right to object, but I think he should use arguments. Now, I am a fireman, but one of these days I am going to be an engineer, if I live. That is the reason why I am firing. When I get to be an engineer, I shan't be a fireman any longer, but I won't to stay in my old Order. Why not let its name be such as to include me, when I get promoted? I suppose we have in our Order 20,000 members, I think 5,000 of them are engineers, that would leave 15,000 firemen and hostlers, say 12,000 firemen. In the next five to ten years nearly all these 12,000 firemen will be engineers. Why not have a name that tells the truth about them? and in telling the truth, firemen are not injured. A Brotherhood of Enginemen, or a Brotherhood of the Footboard takes them all in; the name tells the truth, and everybody is benefitted. The truth never did any harm in this world.

I don't want to be unbrotherly, and won't say hard words, but it has appeared to me that some writers in the *Magazine*, when they have said engineers wanted the new name, had lost their senses. The engineers can get out of our Order if they want to. I, for one, want to keep them in the Order. If they remain with us, we shall, at no distant day, be the greatest Brotherhood on the continent. Some of them are with us, others will remain. Why not have them all? If a new name, that does injustice to none, will help, why not have it? In such things we ought to be rational.

Now, I like the *Magazine*, not only because it has convictions and the courage to state them, but because its Mechanical Department has been of great service to me. It has made me think and read. I don't write anything for it because I do not think I am competent. I am a learner, and I like helps, and it may be that after a while I may chip in, but now, I listen, and ask my engineer and others a great many questions, and am trying to prepare myself for the throttle, and when I get there I am going to stick to my parent Order.

I read with much interest the communications that appear in the *Magazine*. Many of them, in my way of thinking, are good. Now, when the Convention ordered that there should be no more resolutions in the *Magazine*, I wanted to write a letter and say I was glad of it. I got mighty tired of seeing the same old "whereases" and resolutions about everything that transpired in the lodge.

Now, Mr. Editor, I suppose I shall be called a kicker because I am sick of the ceaseless reports of babies being born to our brothers. Such things are mighty poor reading. When a brother gets married he has a right to expect an increase in his family. It is natural, common. Such events are constantly occurring. If a brother's wife should have triplets, it might be well enough to make a *Magazine* article about it, but this "girl baby," "boy baby," "eight pounds," "ten pounds," and soon, ought to be kept out of the *Magazine*, or there should be a "Baby Department" in which such things could be dumped without being scattered through the book. I am not opposed to marriage, nor do I believe it a failure, but there are some things connected with marriage that need not be told, and this baby boring business is one of them.

Yours from way back,
Scrap Heap.

CHICAGO, October 22, 1889.

Editor Firemen's Magazine:

Garden City Lodge No. 50, desires sufficient space in the *Magazine* to recite a few items concerning a pleasant affair which occurred Thursday evening, October 7th, at the residence of our worthy Master, Calvin M. Wolcott. It was a surprise party, and everything was gotten up in good shape. The Claremore Athletic Club kindly tendered the use of their hall for dancing purposes, and Mrs. Wolcott, the mother of our Master, gave the supper, and everything went for the good of the Order. The following members and friends were present, viz.: Messrs. Chas. Reed, D. L. Carmichael, Joe Bulsoss, Alex. Bulsoss, Alfred Puyle, Frank McGregor, Tom Berry, Geo. Brisler, Chas. Smith, Peter Smith, Wm. Bowen, Oliver Hogan, Chas. Goake, Tom Donahue, Hugh Perry, John Perry, Paul Bulsoss, John Sanders, Wm. Ball, J. Delaney, Geo. Potter, Wm. Ridgely, Mat Keefe, John Gorman, Eugene Devine, Wm. Devine, John Normyle, Ben. Kelsner, Joe Sidley, W. H. Sullivan, Joe Schroder, M. Crotty, H. Lomax and H. Turner. Misses Mamie Reed, Nettie Reed, Kate Hancy, Sellana Bulsoss, Louise Bulsoss, Emma Carmichael, May Parker, Emma Hannahau, Minnie Dunn, Bessie Dahl, Katie Murray, Katie Hannahau, Mary Flynn, Annie Donahue, Mary O'Brien, Annie Baulfrau, Aggie McLaughlin, Mrs. Della Lozer, Mrs. Rose Hogan and Mrs. Joe Bulsoss and Mrs. H. Lomax, Maggie McLaughlin. It is needless to say that the occasion was one of rare enjoyment to all who were so fortunate as to be present.

Fraternally, the committee of arrangements,
James Lee, Chairman.

CHANGING THE NAME.

Now lots of the brothers are writing
And I think they are having a game;
For I do not believe they are crazy enough;
To want to be changing our name.

No doubt they are some of 'em drivers,
We've some in fifteen the same;
But all of them stick as close as a brick;
To the gallant old B. L. F. name.

I'm a champion of onward advancement,
And try to keep pace with life's game;
But would like to see some better reason,
Than those given, for this change of name.

I don't want a final withdrawal,
And to force me to take one's a shame;
But that's what I'll have to be doing
If they will stick an E in our name.

MONTREAL, CANADA.

W. F. S.

WASHINGTON TERRITORY, October 21, 1889.

Editor Firemen's Magazine:

In the October number of the *Magazine* you have a couple of articles to which I wish to refer, and also in my humble way, to take a little exception to. I refer to the scheme you refer to, for a system of premiums to employes for running their engines at the lowest possible cost for fuel and oil, and other expenditures. You advise Mr. Scott, of the C., St. P., M. & O., that, in your opinion, it would have the desired effect of reducing the expenses and doing away with "extravagant and careless firing." Mr. Editor, I beg to differ with you as to the effects it would have, as I assure you that the scheme, in the hands of some men, who are lacking in judgment in regard to the want of engines with different trains, and who look for the same performance from every engine, whether it be an old "scrap heap" or an engine in good condition.

Some eight or nine years ago, I was a fireman, employed on the L. & N. W. Railway, in Lancashire, England, where this system of premiums was in full operation, and it was a bug-bear of the worst kind to the men. The system commenced with very encouraging prices to the men, whereby they could make considerable money, which, I assure you, was an encouragement to the men. By and by, the bonus was reduced, until it disappeared; so that at the time I was leaving there, a man who could do his running for a month without having to explain his heavy consumption, would consider himself in luck. Mr. Editor, the bonus or premiums had disappeared, never to return again, and it was as if the older heads had at the start invented a whip for the men to lash themselves with. This was under the management of Mr. F. W. Webb, of Crewe, who so many times received much praise at the hands of American papers for his fine mechanical work on his locomotives, and for being the promoter of the scheme for compound locomotives that have been lately experimented with on the Pennsylvania system. Mr. Webb is undoubtedly a fine mechanic in more ways than one, and what he don't know about "monkeying" with a pay roll, and putting on fines working classification to its extreme lim-

its, and sitting down with an iron hand on labor organizations, is not worth knowing.

I wish to refer briefly to your article on "Robbing Employes By Employers," where you gave us some quotations from *Iron Age*, showing us how the wages of an industrious, smart mechanic were systematically cut down to a mere pittance, by unscrupulous employers, and you could not possibly have given us any better illustration of what I tell you will surely occur if the premium system comes into operation for coal and oil. I have seen men work all kinds of schemes they could possibly think of to save fuel, running with the heater on, all the time on the injector out of use; and when stopped at stations put on the other one and have the water in the tank at boiling heat, before putting it in the boiler; yes, and at sidings they would steal coal, and every scheme was resorted to for a light expenditure through the month.

Mr. Editor, human nature is much the same (that is the mean part of it), whether it breathes on this side of the Atlantic or the other, and you can "bet your bottom dollar" that the premium list in the hands of such men as Corbin, Stone, Bonzano and Perkins, would soon cease to be the good thing it is looked upon at the present. I am in favor of running as light as possible, and all through my firing and running, I have made it a study to run as light as possible, but I am not in favor of the premium scheme, as I am sure it will prove in the end a whip with which we will lash the life out of ourselves. I remain,

Yours respectfully, *Cascade.*

THE DALLES, OREG., October 24, 1889.

Editor Firemen's Magazine:

Permit me to say a few words for Mt. Hood Lodge, No. 167. We have Bro. John Anderson for our Master, and Bro. Charles Ryan for our Collector. They are a hard pair to beat, and are always at their posts of duty, and you will always find them in the Lodge room if they are in town, and you bet Charley makes the boys come to the front with their cash every quarter. I don't think he has much trouble, for we have as fine a set of boys in our Lodge as ever walked a foot-board in any shape you have a mind to take them. They are Brotherhood men to the backbone, and if anyone has any doubt about it let them call around and see us. We have quite a number of new men; most of the boys have been promoted to the right hand side and to hostlers, which leave but few Brotherhood men firing, but we have three or four men ready to join us at our next meeting. Business is good on the road, and the boys are making all the time they can stand and keep fat. I hear that Bro. H. P. Smith (or Hairpin Smith, as he is more commonly called) is getting fat as a match, but this, you know, is a good country for health.

Narrow Gauge.

The invitations issued for the Fifth Annual Ball of Saginaw Valley Lodge, No. 286, which occurred November 27th, were exceptionally handsome and reflected great credit on the boys.

OUR BROTHERHOOD.

Is there anything about it—by all the gods of
Greeks, I doubt it—

That should make it hang its head in the Labor
Councils of the world?

If so, name it—by all the pagan gods ostracize
and shame it—

And let its glorious banners be trilled and
furlled.

Is its history that of cravens? and its members
vultures and ravens?

Has it been destitute of courage, in the battle
and the storm?

If so, why then denounce it—if so, why then
renounce it,

And let it reap a harvest of unspeakable scorn.

When was it that our Brotherhood, was less than
courage and manhood—

Could demand of its members when the battle
cry was heard?

If ever it covered or faltered, let it be guillotined
or haltered,

And let its foul remains, like a dog's be
interred.

No, No, fling out its battle banners, burden the
air with loud hosannas,

The Brotherhood of Firemen, true as the needle
to the pole;

Is not an order of buffoons, not a brotherhood of
poltroons—

But of men who dare maintain their indepen-
dence, and brook no control.

All hail, then, Firemen, Brothers, worthy of
your fathers and your mothers,

Who though poor, perhaps, in worldly goods
made you heroes born—

In times of peace or of battles, you are not
"dumb driven cattle,"

And proudly you laugh would-be masters to
to scorn.

Then hold aloft the scoop, we hail it with a
whoop—

'Tis we who fire the trains that go thundering
o'er the land,

And when we are promoted, with pride we'll
not be bloated;

But with our parent Brotherhood while life
lasts, will stand.

Grill.

Young Runners and a New Name.

ST. LOUIS, Mo., October 22, 1889.

Editor Firemen's Magazine:

In reading the numerous suggestions in regard
to our new name, it is very evident that opin-
ions differ a great deal.

I am, as a good many others here, are, very
much in favor of a change. It is quite true, we
hold the majority, of brothers promoted, but
that is not quite what we want. We prefer see-
ing them all stand by the Order, for we know
they are good men, tried and true, too good to
add to the ranks of the B. of L. E.

We have been supplying them long enough.
If they think their Order so far above the Fire-
men's Order, let 'em roll, but if the firemen put
nothing in the box, the steam will surely go
down, and the machine will not only stop, but
will roll down hill, and there will be neither
brakemen nor switchmen to stop it.

If the engineers don't square things at Denver,
why not cut off the supply of young runners?
retain the five thousand runners now in the

Order, as also the five thousand, who, during the
next five years, will be promoted—[that's Let
Well Enough Alone's estimate] and I guess its
about right, although his suggestions don't quite
fit.

Why turn these 10,000 men over to the B. of L.
E.? It would be for that Order, just like draw-
ing a pension with back pay. Will we turn
them over? Well, I guess not, as things stand
just now; any way, if the B. of L. E. don't want
to federate, we might as well monopolize the
stock of young runners. Monopoly may not
be just the thing for a railroad man, but I think
it will take in this case, don't you?

I am very much in favor of B. of L. M., as it
suits all classes.

Yours

Cammie.

PHILADELPHIA, PA., October 25, 1889.

Editor Firemen's Magazine:

I take pleasure in informing you of the very
successful and enjoyable trip of Fairmount
Lodge No. 333, the event being the second annual
excursion of the Lodge down the river to Cape
May, on the steamer Republic, on August 24th.
Although the morning was rainy, which, of
course, was the reason for a very large number
staying at home, still it cleared up in the fore-
noon, after which the day was all that could be
desired for those that did go. The committee,
R. L. Tomlinson, H. C. Reagan, P. J. Lawton, G.
V. Plant and E. A. Benner, find, after making
their final report, that the receipts are just two
hundred dollars (\$200.00), which we think is not
so bad, considering the weather.

We have just presented our retiring Master, P.
Lawton, with an orange-wood gavel, very hand-
somely ornamented with German silver plates
on each end, engraved with his name and office,
and term of office, as a token of our esteem, as
we all know that the past year and a half has
been one of the most trying times the Brother-
hood ever experienced. The way in which Bro.
Lawton filled the office as Master, his never-tir-
ing efforts, and his being so successful in keeping
up the spirits of our own and other members was
surely worthy of recognition, and for such devo-
tion we made the presentation.

R. L. Tomlinson, Sec'y.

CHATTANOOGA, TENN., October 29, 1889.

Editor Firemen's Magazine:

Please give Mt. Lookout Lodge, No. 289, a
chance to be heard. It has about twenty-five
members. Some are on the C. S., some on the A.
Y. S., the E. T. V. & Y., W. & A. and Chattanooga
Union roads. We have the right man in the
right place, Raimon Segasser, as Master. I can
say the same of all the other officers. I have
quit firing, and am running a stationary engine,
but I have not left the B. of L. F., nor do I in-
tend to. As for changing the name, I am in favor
of making it the Brotherhood of the Footboard.
It is the best name that has been suggested.

Fraternally yours,

James S. Pinton.

Personals.

T. W. KERNS, of 277, is deservedly popular among the boys.

R. T. SKINNER is now Secretary of C. J. Hepburn Lodge, No. 160, and he makes a most excellent one.

S. P. PHILLIPS, Secretary of Garfield Lodge, No. 203, is a zealous worker in the interest of the Brotherhood.

ROBERT STACKHOUSE keeps the records for Trenton Lodge, No. 253, in a manner alike creditable to himself and the Lodge.

We are in receipt of encouraging reports from Mobile, Ala. The officers and members of No. 277 are working together with the determination of building up a model Lodge.

M. A. HENRY, who serves as Secretary and Receiver for Gilbert Lodge, No. 240, is a model officer. Promptness and accuracy are his distinguishing characteristics.

The members of Federation Lodge, No. 122, are heartily congratulating Brother T. H. Crowner, the popular Receiver, upon his marriage to Miss Mary McElroy, of Springfield, Ill.

It is rumored that a Commissioner of Pumpkins and Squashes is soon to be appointed for the State of Vermont, and the Lyndonville boys suggest our worthy Grand Master as the right man for the position.

JOHN MYERS, Past Master of No. 63, is one of our most loyal members on the C. & E. I. R. R. He has been on the right side for some time, and his record as an engineer is second to none. There are no files on "Jack."

By diligent work and close application to duty, Brother L. L. Hood, of No. 150, has reached the summit of his calling. He is now pulling a fast express train with eminent success. Brother Hood is one of the stalwart members our Order, and it affords us special satisfaction to speak his praise.

We acknowledge the pleasure of a call from Brother W. D. Stokes, Secretary of Federation Lodge, No. 122, Pana, Ill. Brother Stokes reports 122 on an ascending grade, and the members doing well. If Brother Stokes is a fair representative of our Pana brethren, they will all pass muster.

When Calhoun Lodge, No. 84, Battle Creek, Mich., is in session, John Tighe occupies the chair, and from all accounts he makes a sterling presiding officer. Himself a thorough Brotherhood man, he inspires the members of his Lodge to emulate his example of devotion to the interests of the Order.

Our old friend Wm. J. Hugo, for many years the mainstay of Eureka Lodge, No. 14, was quietly married some time since. He stole a march on the boys, ourselves included, not even giving the slightest hint of his matrimonial intentions. We congratulate you all the same, Billy, and hope that life to you and yours may be one long, happy honeymoon.

GRAND MASTER SARGENT visited Battle Creek, Mich., October 27th, and held a meeting under the auspices of Calhoun Lodge, No. 84. A joint meeting with the engineers and brakemen was held, and a most pleasant and profitable time was had. Brother Sargent is quite enthusiastic in his praise of the men at Battle Creek. He says they are progressive and wide-awake, and in all regards abreast of the times. Federation was endorsed by the several orders, indicating a purpose to unify and harmonize for mutual good.

Firemen's Meeting at Denver.

It appears that on Sunday, October 27, there was held in the city of Denver, Colo., a meeting of Locomotive Firemen reported as being a meeting of Locomotive Firemen. We quote from the *Denver Republican* of Monday, Oct. 28:

"Not only are hundreds of members of the International Brotherhood of Locomotive Engineers holding their annual meeting in this city, but yesterday a kindred order, and one not less important, held a session here also.

"The second was composed of about 130 delegates of the International Brotherhood of Locomotive Firemen.

"The meeting was held in the hall of Rocky Mountain Lodge, No. 77, on Fifteenth street, and lasted several hours, the object being to discuss the proposed labor federation now agitating the Brotherhood of Locomotive Engineers."

"* * * * * The only question upon which the firemen differed in the meeting yesterday afternoon were those of detail."

"It was soon evident that they were in favor of federation; the various Trades' Unions retaining their autonomy and the right of self government. In other words, the individual labor organizations will, under the proposed plan, occupy the same relation to the whole body of organized labor that the respective States bear to the Federal Union."

Now, we desire to say that the meeting which took place in Denver, reported as claiming to be a meeting of the Brotherhood of Locomotive Firemen, was unauthorized and totally without authority to commit the Brotherhood to any proposition whatever. It had no authority to submit any plan of federation to the convention of the Brotherhood of Locomotive Engineers, or any other body, in the name of the Brotherhood of Locomotive Firemen.

The plan of federation submitted to the engineers, if the Denver papers correctly report proceedings, has no existence in fact, as subsequent to its adoption by the Atlanta convention, full power was conferred upon the Grand Officers, to make such "modifications" in it as might be required, so that in publishing the original action of the convention without following it by the subsequent action of the Atlanta convention, a purpose is clearly manifest to mislead the readers' mind.

Federation, so far as the Brotherhoods of Firemen, Brakemen or Trainmen and Switchmen are concerned, is an accomplished fact. Federation is established. Federation exists—is in operation. There is one way for organizations which desire to federate to proceed, and but one way. To submit any other plan in the name of the Brotherhood of Locomotive Firemen to any other organization is an insult to authority, and well calculated, if not promptly exposed and rebuked, to cast an insufferable stigma upon the Brotherhood. Let it be distinctly understood that the Denver meeting, reported in the Denver papers, to which we have referred in this article, had not the shadow of authority to act or speak for the Brotherhood of Locomotive Firemen, in the matter of committing it to any plan of federation whatever.

The Union Pacific Employees' Magazine on Federation.

Manifestly, the *Union Pacific Employees' Magazine* has been shamefully imposed upon. Some insect got into its ear, or in close proximity to that organ, and poured into it a bucket full of slop about "the Federation of the Supreme." The *Union Pacific Employees' Magazine* has always, so far as we know, been an intelligent, earnest champion of federation. In its June issue appeared an article on federation worthy of and well calculated to command earnest and wide attention. The article captioned, "The Federation of the Supreme," which appears in the November issue of the *U. P. E.'s Magazine* is as unlike the June article as the outpourings of a slop-bucket are unlike Niagara Falls. In the June number of *U. P. E.'s Magazine*, we have argument, cogent reasoning, apt illustration; in the November issue, upon the same subject, we are treated to flatulent, vapid abuse, defamation, railing—to use a phrase—"jaw." Such facts lead us to conclude that some one with a hatchet to grind, being too small to wield an ax, has been able to vent his spleen in the ear of the *U. P. E.'s Magazine* in the hope that his filth and falsehood would in some way inure to his benefit. We are not able to account for the appearance of the November article upon any other hypothesis, and this conviction is strengthened by the fact that as late as September the *U. P. E.'s Magazine*, in an article captioned "The Telegraphers' on Federation," treats the subject in a way so lucid and cogent as to convince us that it has been the victim of imposition; that some hypocrite or knave, by misrepresentations, persuaded the *U. P. E.'s Magazine* to publish an article which not only does the *Magazine* great injustice, by placing it in direct antagonism to itself, but is a flagrant indecency in so far as innuendo and covert falsehood and slander make such things indecent.

The article in the November issue of the *U. P. E.'s Magazine* starts out as follows:

"Nine Grand Officers of the organizations of railroad employes met in Chicago, last June, supposedly to prepare a plan of federation for railroad employes' organizations, but succeeded only in federating themselves."

In the foregoing, we have the term "supposedly," as if the meeting in Chicago, of the authoritatively appointed committees of three great brotherhoods of "railroad employes" were in doubt as to the object of this meeting; that they presumed, imagined, conjectured, in regard to the purpose in view, and finally "succeeded only in federating themselves."

The innuendo, always the weapon of cowards, is found in the term "supposedly," and the falsehood, in the sentence, "succeeded only in federating themselves."

What are the facts? The nine men who met in Chicago last June, were the Grand Officers of the great Brotherhoods of railroad employes, viz: The B. of R. B., the S. M. A. A. and the B. of L. F. They did not meet for a *supposed* purpose nor

"supposedly," for a purpose, but for an absolute, sharply defined purpose, and that purpose was carried out to the letter, and the three great Orders named, have since the adjournment of that meeting marched under the federated flag, and to silence such croaking imposters as abused the confidence and credulity of the *U. P. E.'s Magazine*, the Brotherhood of Brakemen, and the Association of Switchmen, in annual convention have endorsed the action of their Grand Officers, who in Chicago, in June last consummated *federation* and created the "Supreme Council."

In the foregoing we have exposed the mean mendacity of the charlatan who misled the *U. P. E.'s Magazine*. The maxim in law is that one falsehood vitiates the entire testimony of the liar, he is not to be believed even when he tells the truth. Upon this theory we could prudently dismiss the creature who outraged truth when he played the part of "spotter" in the office of the *U. P. E.'s Magazine*, and reported false statements and vicious conclusions relative to the actions of the men, who in Chicago, in June last, by authority and in accordance with the authority conferred by the organizations they represented, achieved federation. And yet the impotent kicker, whose deceit secured the attention of the *U. P. E.'s Magazine*, says: "Where they got their authority would be hard to say." Not hard to say, nor difficult to find. The task is an easy one and we proceed to perform it for the benefit of the *U. P. E.'s Magazine*, confident that when the imposter again presents himself for the purpose of maligning the "Supreme Council," and of casting odium upon federation, that he will not be permitted to stain its pages with his falsehoods.

We speak for the representatives of the B. of L. F., who in Chicago, in June last, took part in organizing the Supreme Council: F. P. Sargent, Grand Master; J. J. Hannahan, Vice Grand Master, and E. V. Debs, Grand Secretary and Treasurer. Their authority to act is found in the following resolution, or "motion," adopted by the Atlanta Convention of the Brotherhood:

"Motion, that the Committee having the matter of Federation in hand be given FULL POWER to act in ALL THINGS necessary to EFFECT FEDERATION with the several organizations named, and that they HAVE AUTHORITY TO MAKE SUCH CONCESSIONS AND MODIFICATIONS IN THE FEDERATION LAWS ADOPTED BY THIS BODY AS MAY BE REQUIRED TO SECURE THE APPROVAL OF THE OTHER ORGANIZATIONS."

This ought to be sufficient to convince the *U. P. E.'s Magazine* that it has been victimized by an unscrupulous knave, who, if he knew the facts, withheld them from the *Magazine*, and if ignorant of them was willing to concoct a scheme to injure men who had in no one particular exceeded their authority.

In closing this article, we repeat what we have said, that not a line nor a sentence in the article appearing in the November issue of the *Union Pacific Employees' Magazine*, captioned "The Federation of the Supreme," is in consonance with

any other article published in that *Magazine* that has ever come under our observation. The *U. P. E.'s Magazine* is an organ of the Knights of Labor, and all loyal Knights are the advocates of law—without which no organization has any lease of life—and it is such facts that lead us to the conclusion we have arrived at—that some one, possibly professing to be a member of the B. of L. F., seeks through the columns of the *U. P. E.'s Magazine* to stab law and wreck authority.

The great order of Knights of Labor, know what such opposition to authority means, and as we write, at Atlanta, Georgia, loyal knights are seeking, as best they can, under the leadership of their Grand Master Workman, to triumph over men, who calling themselves knights are denounced as knaves.

The Brotherhood of Railway Trainmen.

At the St. Paul Convention of the Brotherhood of Railway Brakemen, the name of the Order was changed to that of The Brotherhood of Railway Trainmen. The change was made that the name of the great Brotherhood should suit conditions of membership. The Order had grown to be something more than a Brakemen's Brotherhood; the fact was recognized; hence the new name.

In our November issue we were unable to do more than to refer to the opening exercises of the convention; since the time that our November pages went to press we have a complete account of such proceedings as are given to the public, and it is most gratifying to know that the Brotherhood of Railway Trainmen is on the high road to power and influence, and is making almost unexampled progress. And here, it should be said, that the convention unequivocally indorsed federation and the action of its Grand Officers in establishing the Supreme Council of the Federated Orders—a splendid tribute to the enlightened wisdom of its Grand officers.

The election of officers of the Order resulted as follows:

Grand Master,	S. E. Wilkerson
First Vice Master,	P. Morrissy
Second Vice Master,	T. T. Slattery
Third Vice Master,	Terrel
Grand Secretary and Treasurer,	W. A. Sheehan
Editor and Manager of <i>Journal</i> ,	L. W. Rogers

Mr. Ed. F. O'Shea, Secretary and Treasurer of the Order and Editor and Manager of the *Journal* resigned, and the event created intense regret on the part of the delegates.

The next convention of the Order will be held at Los Angeles, California, and in closing this notice of the convention the *Magazine* expresses the wish that the future of the Brotherhood of Trainmen may be such as to exceed the most sanguine expectations of its officers and members. It is now a great and influential organization, and, as we read the signs of the times, is entering upon a career of power which will advance the interests of organized labor throughout the country.

Ed. F. O'Shea.

Among the hosts of young men who have tolled to advance the interests of railway employé organizations, not one within our knowledge has done better service than Mr. Ed. F. O'Shea, late Grand Secretary and Treasurer of the Brotherhood of Railway Brakemen. With a well disciplined mind, a good education, and profound sympathy in all matters relating to the welfare of the Order with which he has been officially identified, he bade fair to become, in the prime of his manhood, a recognized leader and force in the labor organizations of the country. Such considerations are fruitful of regret that he is no longer officially identified with the Brotherhood of Railway Trainmen, and we are free to admit that his resignation of the office of Grand Secretary and Treasurer, was a painful surprise, all the more to be regretted because Mr. O'Shea was the Secretary of the Supreme Council of the federated organizations of railroad employés.

We learn that Mr. O'Shea contemplates entering the Life Insurance business at Denver, Col., in the near future, and that Mr. W. G. Edens, late Vice Grand Master of the B. of R. B., will be associated with him. It is only left for us to express the hearty wish that prosperity may attend them in all their undertakings, and the *Magazine* will be happy at all times to lend a helping hand to insure their success.

Withdrawal Cards.

There seems to be a misunderstanding in reference to the granting of limited withdrawal cards to members who desire to withdraw from one subordinate Lodge to join another. We quote the laws governing the subject as follows:

SECTION 143. Members in good standing, desiring to withdraw from one Lodge to join another, shall make application through the Secretary of the Lodge they desire to join for a limited withdrawal card. Said application shall be made to the Secretary of the Lodge of which the applicant is a member, and shall be presented at the next regular meeting, and if the applicant is in good standing the card shall be granted and forthwith forwarded to the Secretary from whom the application was received. Accompanying the card the Secretary shall forward a statement of the withdrawing member's standing and the date to which his dues are paid.

SEC. 144. Upon receiving such a withdrawal card, the Secretary shall present the same for deposit at the next regular meeting, and if accepted by a majority vote of the Lodge the card shall be accepted and the applicant shall be enrolled as a member of said Lodge from and after that date.

The foregoing seems to be clear and free from any ambiguity, and yet we are in receipt of innumerable complaints from members who claim that they are unable to secure withdrawal cards after having made repeated applications therefor. When a member requests the Secretary of the Lodge he desires to join to apply for his withdrawal card he should do so promptly, and the Secretary who receives the request should be equally prompt in procuring the card and forwarding it to its destination. If this is done a deal of time and trouble will be saved.

The Denver Convention of the B. OF L. E.

On November 4th, at 4:15 P. M., the twenty-sixth Annual Convention of the Brotherhood of Locomotive Engineers, held in Denver, Colorado, closed its labors, which began on Wednesday, October 16th. As a result, the session included twenty days, fifteen of which were devoted to legislation and the remainder to religion and recreation. There were 428 delegates present, one of whom, Edward McCormick, of Boone, Iowa, died during the session; a mournful incident, which shrouded, for a time, the convention in gloom.

The Denver Convention, was, we think in some regards, the most notable the Brotherhood ever held.

The election of officers, always a matter of great importance to delegates and Divisions, resulted as follows:

P. M. Arthur	G. C. E.
T. S. Ingraham	F. G. C.
D. Everett	S. G. E.
J. R. Spragg	T. G. E.
H. C. Hays	F. G. A. E.
A. H. Butler	T. G. A. E.
George R. Douty	G. C.
W. B. Huskey	G. G.

The next convention will be held in the city of Pittsburg.

We have intimated that the Denver Convention will pass into history as one of more than ordinary importance. The Order of Locomotive Engineers, requires no eulogy at our hands. It is a great Brotherhood. The duties of a Locomotive Engineer, in their importance, it would be difficult to over estimate. Engineers require, not only courage, and that intelligence which is derived from experience, but a mind that readily grasps cause and effect in all that pertains to the running of locomotives, and the demands upon their mental powers are constantly increasing. Hence, and necessarily, locomotive engineers, as a class, are brainy men—and when 25,000 of them are enrolled in an organization, it becomes great in matters more important than numbers.

It affords us special pleasure, in this connection, to say as a matter which reflects the highest credit upon the Convention, that the law requiring a locomotive engineer, a member of the Brotherhood of Locomotive Firemen, to abandon his parent order, to become a member of the B. of L. E. was repealed, subject however, as we understand, to the condition, that the applicant takes out an insurance policy in one grade or class, as provided by the laws of the B. of L. E. But as insurance in the Engineers' Brotherhood is not compulsory upon its members, we regard the condition imposed upon members of the B. of L. E. as inoperative. Of this, however, more can be said when all the facts are known.

In matters relating to federation a very decided advance was made, though practically little may come of the action immediately—that is to say, before the next Convention convenes at Pittsburg. In this matter we feel neither anxiety nor doubt as to ultimate results. The question

is now before the engineers, and will be discussed. Discussion is what is wanted, and the probabilities are that the *Engineers' Journal* will give the subject special consideration. Federation was the all absorbing question during the Convention and had hosts of intelligent and fearless advocates. It is the question of questions and by earnest, dispassionate agitation and discussion will, in due time, be adopted by the B. of L. E.

J. E. Phelan.

We notice by a circular under date of November 1st, that Mr. J. E. Phelan, has been appointed Superintendent of the Missouri Division of the Northern Pacific Railroad, a position of great responsibility and requiring first-class ability. Those who have the pleasure of knowing Mr. Phelan will at once recognize the eminent fitness of the appointment. Mr. Phelan's advancement in the railway service, has been from the first a reward of merit, a recognition of first-class ability and thorough comprehension of duties to be performed. We not only congratulate Mr. Phelan upon his promotion, but we felicitate the Northern Pacific upon its good luck in securing so capable a man to superintend its Missouri Division. In railroading the right man in the right place is a guarantee of success, a fact which the General Manager of the Northern Pacific seems to fully comprehend.

L. W. Rogers.

When Mr. Ed. F. O'Shea resigned the position of Editor and Manager of the *Brakemen's Journal*, Mr. L. W. Rogers was elected to fill the vacancy, and we doubt if a better selection could have been made. Mr. Rogers is not only a cultured, vigorous and ready writer, but is thoroughly identified with working men, and an eloquent champion of the cause. He has large editorial experience, and we predict that the *Journal*, under his management, will achieve a large measure of success. The *Magazine* extends most cordially the right hand of fellowship, and when anything is proposed for the "god of the Order," Brother Rogers will find the *Magazine* ready to pull with him.

It is a pleasure for the *Magazine* to say, that Fargo Lodge, No. 85, is made up of brotherhood men in all that the term "brotherhood" means. In dealing with a worthy member out of employment, fraternity takes precedence, and the stranger realizes that a "friend in need is a friend indeed. There is warmth in every grasp of the hand, brotherly friendship in every glance of the eye, and what brothers can do is done with such a hearty good will, that the stranger realizes that he is at home. Mr. L. L. Bean, Master Mechanic of the Dakota Division, has employed a number of brotherhood men, and is known to be a man of generous impulses, and as such, has won the esteem of the men in his employ.

Insurance Policies an Important Matter.

On more than one occasion the *Magazine* has called the attention of the members of the Brotherhood, to the supreme importance of having their **BENEFICIARY CERTIFICATE** made payable to the parties to whom they desire that payment should be made. Strange as it may appear, this duty in numerous cases is neglected, resulting in ceaseless vexations. As late as July 1889 we urged upon the members prompt action in this matter, but in numerous cases our suggestions and warnings have been disregarded. We are disposed to repeat our advice and admonitions in the hope that good may result to those whose interests are directly involved, and we are all the more anxious, because a case has just occurred which sharply points a moral, and illustrates the vital importance of the subject. The case referred to, is that of a Brotherhood fireman recently killed, his injuries were such that he had only time to make the dying request that his policy should be paid to his sisters instead of the parties named in the policy. This *could not* be done. Why? Because the *proper* transfer had *not been* made. And that the matter may be fully understood, we print *again* Section 67, page 24 of the Constitution, upon the subject, as follows:—

SEC. 67. Any member desiring to make a new direction as to the payment of his beneficiary certificate may do so by and with the consent of the Lodge of which he is a member. He may then authorize such change in writing on the back of the certificate in the form prescribed, attested by the Secretary with the seal of the Lodge attached, *but no such change or transfer shall be valid or have any binding effect until reported to the Grand Secretary and Treasurer.* All subsequent transfers shall be made in the same manner, except that a duplicate beneficiary certificate shall be issued by the Grand Secretary and Treasurer when a third transfer is authorized, provided that the old certificate has been returned to the Grand Lodge. All transfers of beneficiary certificates shall be recorded in the beneficiary certificate register of the Subordinate Lodge and also in the Grand Register.

The law is explicit, easily understood, so simple indeed that a child can understand it, nor is it misunderstood. It is not complied with because of neglect, the failure to perform an important duty at the *right* time and in the *right* way.

We state another case; the beneficiary named in the policy was the mother of the deceased, who, having married, failed to have his policy transferred to his wife, as a result, his wife is left penniless, while we are compelled to pay the insurance to the mother, who refuses to surrender any part of it to the widow of her son.

Again, we have a case in which the beneficiary named, had been dead for years and now, all the heirs are going to law to enforce payment. The Grand Lodge now has on hand six of such cases, as the result of the inexcusable negligence of members, and is dragged into court and put to endless expense and trouble.

The question arises, what is required? *First* examine the law. We print it herewith that every plea of not knowing what it provides, may be silenced. Having read the law, each

member should at once examine his policy and see to it that the proper party to receive the money is named in it. If a change is desired, the transfer should be promptly made as the *law directs*, and here let it be understood that the transfer is *not valid* unless it is reported by the Secretary of the Subordinate Lodge to the Secretary of the Grand Lodge, and that until this is done, the transfer is *null and void* and of no *binding effect* whatever.

We have a case now on hand when a transfer was made by the Subordinate Lodge, but the Grand Lodge was not notified and hence the transfer has no binding effect. The report of the Secretary of the Subordinate Lodge to the Grand Secretary is required, so that the transfer may be recorded in the General Register which is the official register of the Grand Lodge, by which we are bound in all cases at law.

We feel deeply in earnest upon this subject. We desire in all cases that the beneficiary should be the person whom a deceased brother desires to have the money, called for in his policy, paid. We would sacredly regard his wishes, but they can be *legally known* only by the name he has had inserted in his policy—no other names can be known to the Grand Lodge—hence, when a change of persons is desired, the *transfer* must be made as *provided by law*. Any other course would result in endless confusion.

The matter is of so much importance that we urgently call upon the Masters and Secretaries of subordinate Lodges to canvass the membership of their Lodges and personally call the attention of members to the subject. Let this be done at once and thoroughly, and the result will be a source of consolation to the members and a blessing to those who are justly entitled to the money provided by the affectionate solicitude of those whose voices have been silenced by death.

THE advertisement "something new," which appears in the *Magazine*, is beautifully illustrated by a photograph which we have received from Messrs. Reardon & Ennis. A little girl, with broom in hand with a dust pan, makes the operation of gathering the dust, if not a thing of beauty, most assuredly a joy forever. Perfection in a dust pan, is just what Messrs. Reardon & Ennis have secured, and such will be the verdict of purchasers.

THE attention of our readers is called to the advertisement of "Reed's Head Light," which appears in another column. The "Head Light" is a valuable book for locomotive engineers and machinists, written by Mr. Wm. W. Reed, a mechanical engineer and should have a wide reading.

In another place we publish a capital article from T. P. O'Rourke, and ask for it the careful reading its merits demand. Brother O'Rourke wields a vigorous pen, and we welcome his communication with real satisfaction.

DECEMBER, 1889.

AN AWFUL RECORD.**Startling Statistics of Death on the Rail.**

L. S. Coffin in St. Paul Daily News.

To the Editor of the Daily News:

While your good city is entertaining the sixth annual convention of the Brotherhood of Railway Brakemen, permit me through your columns to call the attention of your readers to some of the stern and terrible facts that are constantly taking place and the fearful experiences their brother brakemen are suffering while this body is hereby planning and devising ways and means to take care of and alleviate the sufferings of their brothers and the families of those who are so suddenly torn from them.

Below I copy from the *Railway Age* the startling record of only one week, and yet all must bear in mind that this even—terrible as it is and almost beyond belief—is only a partial record of the dread facts. Many a poor fellow goes down under the cruel iron wheels or is caught between the bumpers whose tragic death is never known to the public.

Railroad companies do not as a rule beseege the Associated Press dispatcher to let the world know how many lives and limbs of brakemen are sacrificed on their roads. But read the following list and note the dates, and all will admit that this is enough for one week's carnival of death surely:

Samuel Long, brakeman Pittsburg & Western, was run over and killed by the cars at North Sewickley, Pa., Oct. 1.

B. L. Winget, freight conductor Cleveland, Cincinnati, Chicago & St. Louis, fell from the top of a freight train near Maud's Ohio, Oct. 2, and was run over and killed.

Phillip Gewberring, brakeman Cincinnati, Washash & Michigan, caught his foot in a frog while coupling cars at Benton Harbor, Mich., Oct. 3, and was run over and killed.

W. L. Whitney, brakeman New York, Lake Erie & Western, fell from a freight train while switching cars at Goshen, N. Y., Sept. 29, and received injuries from which he died the next morning.

Fred C. Hill, switchman New York, Lake Erie & Western, had his right hand crushed while coupling cars at Hornellsville, Pa., Oct. 2.

John Johns, brakeman Pittsburg, Virginia & Charleston, caught his foot in a frog at Thompson, Pa., Oct. 2, and had it cut off by a freight train.

Alfred B. Cragier, brakeman New York Central, fell from a freight train near Albany, N. Y.,

Oct. 3, and was run over and had both legs crushed below the knee. One foot had to be amputated.

Charles Devin, an employé on the North Pennsylvania, was instantly killed by being struck by a train near Jenkinstown, Pa., Oct. 3.

George Cunningham, a brakeman, fell under a train at Chicago last week and was run over and killed.

C. A. Dearborn, brakeman, Iowa Central, was run over and fatally injured while switching cars at Mason City, La., Oct. 5.

Karl J. Caruthers, brakeman Louisville & Nashville, fell from a freight train at Baker's, Tenn., Oct. 4, and was run over and killed.

J. Sigabee, brakeman Delaware & Hudson, fell between the cars and was run over and killed at Worcester, N. Y., Oct. 5.

Louis Hess, brakeman Boston Hoosac Tunnel & Western, was run over and fatally injured by a train at Rotterdam, N. Y., Oct. 5. He died soon after the accident.

B. Blossom, brakeman New York, Lake Erie & Western, was injured about the head by being caught between the bumpers while coupling cars near Attica, N. Y., Oct. 6.

John C. Summers, baggagemaster Florida Central a Peninsular, was run over and had both legs crushed while coupling cars at Lacoochee, Fla., Oct. 5.

U. S. Upson, brakeman Wisconsin Central, fell from a stock car at Waukesha, Wis., Oct. 7, and was seriously injured.

M. Morrissey, brakeman, Chicago & Alton, was injured in jumping from a moving train at Williamsville, Ill., Oct. 6.

John Denson, switchman Missouri Pacific, fell under a train at Omaha, Neb., Oct. 6, and had his left arm taken off.

James Welch, conductor on Lake Erie & Western, was instantly killed while setting up the brakes to save a collision, at Findlay, O., Oct. 2.

Please note again carefully the dates. Here this beautiful autumn month is ushered in with this awful week's record of the crushing of limbs and the crushing out of the lives of the young and strong men of our nation. As the weather grows colder, as the ground, as the decks of the cars and the rails become more and more slippery, and the cold iron of the link and pin freezes and sticks to the mittens or gloves of the men, this list will in all probability grow larger.

How long, oh, how *much longer*, will a public, who is served so faithfully by these men, sit still and see these their fellow citizens out down by the score every week from causes that can be so easily removed?

Remember we are dealing with accidents arising from *only* causes alone, viz: The old method of coupling cars by the link and pin, and of controlling the train by the old hand brake—while it is now admitted that there are practical safety couplers and power brakes, which if put in use would prevent a very large per cent. of this indescribable suffering and death, if not all of it.

At the same time this fearful work of mutila-

tion and death of these brakemen was going on for these two causes, there were no less than twenty-three other railroad accidents, such as collisions, leaving the track, broken wheels, etc., etc., which at present seem inevitable, and in which no less than seventy-three persons were injured or killed. Of these twenty-five were employes, and of these fifteen were killed, and of the others some lost both their legs and arms.

Here, now, in one short week no less than 25 trainmen are killed and 28 crippled for life, and of these 11 killed and 8 crippled are by the old-time methods of coupling cars and controlling trains that should have been long ago relegated to the ignorance and cruelties of the Dark Ages.

There is no gainsaying these facts. The writer understands fully the ground he stands on in making the positive statements he does. There is now no longer any excuse for this inhuman work. The public have here a great responsibility. To-day the powerful organization of the Brotherhood of Railroad Engineers is in session in Denver. The soon to be more powerful order of Brotherhood of Brakemen of the United States and Canada is in session in your city.

One of the most important questions before these two bodies is this of a confederation of all these orders of railroad men, and it may be of the Knights of Labor.

Should such a combination be consummated, and then a demand be made by the Brotherhood of Brakemen that all cars should be equipped with these safety appliances or they would refuse to take a car on their trains that had not these, what would be the result? The entire commerce of this great nation would stop, and what reasonable man could blame them?

Who of us would do the duty of a brakeman one single winter's night for all the commerce of this nation or for all the railroads of the world?

I say the public have here a great and pressing responsibility. The united voicing of the public sentiment of this nation could not and would not be resisted by the owners of our railroad property.

It does seem to the writer that a word to the wise is enough. The mere recital of the stern facts occurring and re-occurring every day and every hour, the tragedies that are being constantly enacted in which these brave, grand men, a fair representation of which is now in your city and command the admiration and respect of all that see them, should be enough to stir to the very depths the indignation of any right-thinking man, and all should, as one man, rise up and say this terrible slaughter and maiming of the flower and strength of our lapd must stop and stop now. *It can be.*

Most respectfully,

L. S. COFFIN.

The foolish woman darkeneth her house to save her carpets and keep out flies, and behold, her children grow pale and disease marketh her for its prey.

CURRENT SUPERSTITIONS.

The funeral procession must not cross a river. The last name a dying person calls is the next to follow.

A dish-cloth hung on a door-knob is a sign of death in a family.

The corpse must not pass twice over any part of the same road.

To dance on the ground indicates disaster or death within a year.

Whoever works on a sick person's dress, he or she will die within a year.

If a hoe be carried through the house some one will die before the year is out.

Whoever counts the carriages at a passing funeral will die within the year.

The person on whom the eyes of a dying person last rest will be the first to die.

If thirteen sit at a table the one who rises first will not live through the year.

To break a looking-glass is a sign of death in the family before the year closes.

If three persons look at the same time into a mirror one will die within the year.

The clock should be stopped at the time of death, as its running will bring ill luck.

If one dies, and no rigor mortis ensues it indicates a speedy and second death in the family.

If a hearse is drawn by two white horses death in the neighborhood will occur in a month.

It is unlucky in a funeral for those present to re-pass the house where death has occurred.

If rain falls on a new-made grave there will be another death in the family within a year.

At a funeral, entering a church before the mourners means death to some of the entering party.

If the grave is left open over Sunday another death will occur before the Sunday following.

To keep the corpse in the house over Sunday will bring death in the family before the year is out.

It is unlucky to pass through a funeral, either between the carriages or the files of mourners on foot.

If rain falls into an open grave, another burial in the same cemetery will occur within three days.

If any one comes to a funeral after the procession starts, another death will occur in the same house.

To put on the bonnet or hat of one in mourning is the sign that you will wear one before the year is out.

In Switzerland, if a grave is left open over Sunday, it is said that within four weeks one of the villagers will die.

If during sickness, a pair of shears be dropped in such a manner that the point sticks into the floor, it indicates the death of the sick person.

A common saying in England is: "Happy is the corpse the rain falls on." This belief exists also in the United States. Thus, it is said that if rain falls at the time of the funeral, it is a sign that the dead has gone to heaven.—*Chicago Mail.*

JOHN LIVINGSTONE.

In our last issue we commented on the action of one John Livingston calling himself President of the "Railway Stockholders Association," who entered a complaint with the Interstate Commerce Commission against certain railroad companies for carrying locomotive engineers to conventions free of charge. "General Manager," writing in the *Railway Age*, throws considerable light on this John Livingstone and his ways. The writer says:

I observe in your paper, copy of the complaint against sixty-one railroads, "of whom we are which," for carrying brotherhood men and their wives or other members of their families free.

The complaint is not susceptible of verification in many respects. The Brotherhood of Locomotive Engineers, which has been in existence in this country since 1865, is not a secret society in any such sense as might be applied to the Odd Fellows, Masons and other similar societies. I have watched the practical working of the Brotherhood, and I have no hesitation in saying it has been very useful in elevating the character and the personal habits of the locomotive engineers in this country. Moreover, there have been very few strikes during the 23 years since the establishment of that organization. No business between the locomotive engineers and the railroads which employ them has been attempted to be transacted in secret session. All grievances, complaints or disagreements between the engineers and the railroad officers have been settled openly through a committee of engineers, or through the assistance of Mr. Arthur, the grand chief engineer, and the railroad officials themselves, and the statement that they are a secret society is untrue. I do not happen to have the pleasure of the personal acquaintance of Mr. John Livingston, but I do know that for several years past, on account of his advertised position as President of the "Railway Shareholders' Association," he has obtained annual passes over many of the railroads of the United States. This year, I think, he has been less successful in that regard. If the Brotherhood is a secret society, why did Mr. Livingston address a communication to the meeting at Richmond, Va., and why did he propose to the Brotherhood that he would intercede in their behalf with the C. B. & Q. road, provided they would pay him a certain amount of money? Mr. Livingston's proposition was promptly declined by the Brotherhood. Mr. Livingston seems to be inclined to turn an honest penny at any and all times, hence he offered his services to the C. B. & Q. road as a mediator between that company and the Brotherhood, but at much higher figures.

It has been a custom with railroad companies for twenty years past to allow delegates to the following meetings to take their wives, or some members of their families, with them, viz.: Master Mechanics' Association, Master Car Builders' Association, Train Dispatchers' Association, Passenger Conductors' Association,

Roadmasters' Association, Brotherhood of Locomotive Engineers, etc. No free passes are generally issued by any of the railroads, but it is understood and orders are always given to carry these delegates and their wives, or some other member of their families, free, on presentation of proper credentials. These annual meetings are about the only vacations that such railroad officers and employes ever obtain. Moreover, these meetings are of great concern and great importance to the railroad companies themselves.

There is another instance where the law is violated, if Mr. Livingston's position is correct. Railroad employes in this country in destitute circumstances are killed almost daily, and, as a matter of humanity and propriety, it is frequently found necessary to send the remains to some other State to be buried. The railroad on which the unfortunate man has lost his life makes application to its connecting roads for free transportation for the members of the family of the deceased and those who are obliged to attend the funeral. This custom has also been going on for years past, and is going on today, and ought to continue to go on. If Senator Reagan and Senator Cullom intended when the law was passed by Congress that in "regulating commerce among the States," every railroad should be debarred from doing a charitable or a humane act, or a respectable act, with reference to its employes, why didn't they show it in the law?—*National Car and Locomotive Builder*.

OLD WINE.

A committee of prominent wine-makers, recently appointed to determine how much old wine there is at present contained in the cellars of the State, have made the following report to the State Viticultural Commission: Old wine in San Francisco cellars, 6,000,000 gallons; old wine in country cellars, 6,000,000; total, 12,000,000 gallons. Commenting on these figures, Chief Executive Officer John D. Wheeler said: "In 1887 the shipment of California wines amounted to 7,000,000 gallons, and 5,000,000 gallons were consumed at home, a total equal to the supply now estimated to be on hand. Allowing the very reasonable increase of consumption of 2,000,000 gallons for the present year over last, it is very evident that there neither is nor will be a surplus of wine in the market. This being the case, the present low price at which wines are selling has excited much surprise, and I can only explain it on one ground, and that is that the Eastern cellars are stocked with cheap wines, purchased by dealers while the market was flat."—*San Francisco Examiner*.

A BIRD IN THE HAND.

Solomon Rubenstein (in deep distress). "I expect, fader, ve vas better sent for some ohf dose Elixir ohf Life, ain't it?"

Jacob Rubenstein (very low). "Vot vos you dinkin' ohf, Solomon? Did you wants me to loss mine insurances?"—*Life*.

TWO YEARS.**I.—LAST YEAR.**

They strolled on the beach by the bright summer sea;

He and she.
And they never paid any attention to me,
He and she.
His air was superb and to all that he said
She modestly listened and hung down her head,
While with swift flying blushes her fair face
grew red.

Dear me!

II.—THIS YEAR.

Again they are seen on the beach by the sea,
She and he;
That they're married this year you will quickly
agree,

She and he.
In silence he stalks while she lays down the law,
A man more submissive the world never saw,
He's learned that a kitten has claws in her paw.
Dear me!

—*Somerville Journal.*

HE FOUGHT AT WINCHESTER.

An Old Soldier Fails to Pass Into the Penitentiary.

In the case of the State vs. John Stuart, indictment for larceny, the prisoner appeared in the court room, shuffling along, scarcely able to walk. He wore a soiled check shirt, a very much worn suit and a battered hat.

Appearing as State witnesses were too well-dressed, sleek-looking men who clearly showed by their looks that they were determined to send the old man to the penitentiary.

"Has the prisoner any counsel?" asked Judge Phillips.

"I have none, your Honor," answered Stuart.
"I am a poor man and unable to pay an attorney."

The Judge saw by the man's looks that his was an unusual case and said: "Well, go on and tell your story."

"Well, sir, I was in the Confederate army and at the battle of Winchester I was shot through both hips. Since then it has been exceedingly hard for me to support myself. I went to work for this man last year upon his word to board and clothe me and to pay me what my services were worth. During that time he paid me ten cents, with which I bought tobacco. At the end of eight months he refused to pay me any money and refused to give me any clothes, saying that my services were worthless. Then I went into his wardrobe, took a suit of clothes to hide my nakedness and left. He had me indicted for larceny, and I have been in jail ever since.

As the old man finished, a hushed murmur of indignation was heard throughout the court room.

"You say you were shot at Winchester?" asked Judge Phillips, who was himself an officer in the splendid and memorable charge.

"Yes sir."

"Were you in the second charge to the left on the other side of the town?"

The prisoner's face brightened. "Yes," he said, "I was there, Rhodes' Division, and was

shot while crossing the ravine just below the hill."

The Judge was certain then that the old veteran was telling the truth, but to be certain he called the State's witness.

While this witness was giving in his testimony, which was to the effect that the old man's story was about right, but that he refused to pay him anything because his services were worthless, Stuart leaned over to Solicitor Settle. "Mr. Settle," he said, "your father and I were friends. I lived in Rockingham county and your father persuaded me to enlist in his company. I received my wound while following him. Since then it has been hard for me to keep out of the poor-house.

By this time Judge Phillips, Solicitor Settle and everybody else in the court room were satisfied that the old soldier had been pitilessly persecuted and the faces of the onlookers showed the deepest pity and sympathy for the unfortunate man and the blackest indignation for his heartless employer.

"Mr. Solicitor," said the Judge, "change your bill of indictment from larceny to trespass." This was willingly done by Mr. Settle.

"Now," he continued, "judgment is suspended and the prisoner discharged."

Scarcely had the last words been spoken before every man in the court room applauded, and great tears were seen rolling down the cheeks of strong men. As the old man, who half an hour before had been friendless, hobbled out of the court room, hundreds of men drew round him to shake his hand. Our townsman, W. B. Glen, volunteered to secure him a pension. Mr. Hollyfield offered him a position as a miller, and in less than five minutes a purse was made, up to buy the old soldier a comfortable suit of clothes.—*Leesburg (Va.) Mirror.*

EASY FOR MAN AND WIFE TO QUARREL.

"It is easy for married couples to quarrel and bring themselves to the point of a divorce," said a well-known New Yorker yesterday. "After I had been married three months I came sadly home one night to tell my wife that business would keep me away from her for the next twenty-four hours. She was very girlish, and by way of reply she gave herself a little hug, with a little hug, with a little wriggle of her body thrown in, and expressed her feelings in an exclamation of unmistakable joy. Deeply pained, I said to her that I had never supposed she desired my absence enough to gurggle with joy at the mere proposal of it. Many a man would have gone off angry and darkly suspicious. Instead I questioned her. 'Why, you goose,' said she, 'when you said you were going away one thing popped into my head to the exclusion of everything else. That was: Now he's going away and I can eat some raw onions with salt and vinegar. That was all. I have been dying for raw onions ever since our wedding.'—*New York Sun.*

ROWLEY'S GALLANT DEED.

How He Saved the War-Ship Kearsarge in the Fight with the Alabama.

"It was a beautiful Sunday morning in June," said Richard Rowley, an Inn-ate of the Soldiers' Home at Togus, "when the Alabama steamed out of the harbor of Cherbourg. She had been busy since we sent the challenge in making preparations for the coming conflict, and, as we afterwards learned from the prisoners, they did not experience an idea but what they would be victorious. She was a magnificent ship, and I can remember with what suppressed excitement we made ready for the deadly conflict. Captain Winslow was as cool as a cucumber, and gave off his orders with as much coolness as if he had been safe in Boston harbor. Following the Alabama was a French iron-clad and an English yacht, having on board many ladies, who had come out to see the fight. We took no particular notice of them at the time, but had occasion to remember them afterward. The Kearsarge immediately put to sea, the Alabama following, for Captain Winslow did not propose that there should afterwards be any question as to jurisdiction; the fight must take place in neutral waters. We had probably gone eight or ten miles, when the Kearsarge turned around and headed straight for the Alabama. As we neared the Alabama she opened fire on us, but as her firing was so wild he concluded she was firing at random. The Kearsarge did not fire a shot until we were within 1,000 yards of the Alabama, when the order was given to open fire. Up to this time we had experienced no damage, except cutting away some of the rigging. One big shell imbedded itself in the Kearsarge's quarter, close by the propeller, which, if it had exploded, would have blown away the whole stern. The next shell that struck the vessel killed one man and wounded a number of others. The shells were falling all around us thick and fast. It was at this juncture the conflict was the most exciting to me, and an incident happened in which I was personally interested. We had been fighting some over an hour and a half, and it was evident that we were creating sad havoc on board the Alabama, and they were growing desperate. The gun of which I had charge had been loaded for another shot, and I was just on the point of sighting the piece when a hundred-pound rifle shell from the Alabama struck the side of the gun, which broke the force of the shot, and fell on the deck. The fuse was burning in it, and in another instant it would have exploded. Had it done so, there is no doubt but that would have been the end of the Kearsarge and all on board. I never could understand why I did so, but almost mechanically I rushed for the shell, and picking it up in my arms, I carried it to the side of the vessel and threw it into the sea. In doing so my whiskers and mustache were burned to the skin. It exploded just as it touched the water, throwing the spray high in the air.

"It was all done in an instant, and I did not realize the danger or what I had done until it

was all over. Captain Winslow was standing on the bridge not ten feet away, and witnessed the whole proceedings, as also did the most of the crew. As I picked up the shell I repeated a phrase, a favorite one of mine, which I had always used when exposed to any danger: 'Jesus save me now.' I did not know that I said it, but I must have, for Captain Winslow says he heard me above the roar and noise of the cannonade. A solid silver badge, which I have worn since, was given me by the Secretary of the Navy when I landed in Washington.

"Captain Winslow said that his heart was in his mouth, for he had no idea but what the shell would explode in my arms before I could throw it overboard. He at once gave the order to man the rigging and give three cheers for Quartermaster Rowley. I hope I do not appear vain if I say that I was proud of the distinction which Captain Winslow accorded me, although at the time I did not realize that I had done anything great. The cheers were given with a will. I went back to my gun and put a shot into the Alabama, which made her shake from stern to stern. The crew of the Alabama heard the cheers, and, as they afterward told us, they could not understand it. From that moment they lost courage. The Alabama was fast sinking, and they had run up a flag of truce. Afterward a boat came alongside and said that Captain Semmes had surrendered. We only had two available boats to send to rescue the crew. Before we could get them aboard the Alabama began to settle, and the crew began to jump into the sea. In a short space of time she threw her bow into the air and went beneath the waves, the rebel flags still flying.

"I know there has been some controversy as to whether she sunk with her colors flying. I maintain that she did. I remember it as well as if it were yesterday. We picked up what of the crew we could, but a great many were drowned. Captain Semmes, of the Alabama, jumped into the sea, and was picked up by the English yacht Greyhound and escaped in her. The Kearsarge then steamed into Cherbourg harbor and began firing a salute with her heaviest guns, which awoke the people for miles around."—*Augusta (Me.) Letter in Boston Globe.*

RELATIVE HARDNESS OF WOODS.

The relative hardness of woods is calculated by the hickory, which is the toughest. Estimating that at 100, we get for pignut hickory 96, white oak 84, white ash 77, dogwood 74, scrub oak 73, white hazel 72, apple tree 70, red oak 69, white beech 65, black walnut 65, black birch 62, yellow and black oak 60, hard maple 56, white elm 58, red cedar 56, cherry 55, yellow pine 53, chestnut 52, yellow poplar 51, butternut and white birch 43, and white pine 35. According to this formula woods possessing a degree of hardness equal to only about 40 per cent., or less, than that of hickory, should not be classed as hard woods. Such woods are, however, limited in quantity.—*Sanitary News.*

This Department is for the exclusive use of the Grand Lodge of the Brotherhood of Locomotive Firemen, and will contain all Notices of Dues and Assessments, and other Official Notices, Reports and Statements emanating from the Grand Lodge. All Lodges and members of the Order should note carefully each month the contents of this Department.

DECEMBER, 1889.

Assessment Notice for December.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., December 1, 1889. }

ASSESSMENT No. 8, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the Order, viz.:

CLAIM No. 148. Dennis Hayes, of Weaver Lodge, No. 379, was killed in a Collision August 23d, 1889.

CLAIM No. 149. George Real, of Chicago Lodge, No. 95, died of Diphtheria, August 27th, 1889.

CLAIM No. 150. Franklin C. Ryder, of Bartholdi Lodge, No. 308, died of Typhoid Fever, August 30th, 1889.

CLAIM No. 151. Henry Cloughly, of Black Hills Lodge, No. 86, was killed by Railroad Accident, August 31st, 1889.

CLAIM No. 152. E. R. Coates, of Three Branch Lodge No. 304, died of Congestive Chill, September 15th, 1889.

CLAIM No. 153. J. W. Jordan, of Macon Lodge, No. 216, was killed by Railroad Accident, September 17th, 1889.

CLAIM No. 154. Elmer E. Groves, of Buffalo Lodge, No. 12, died of Typhoid Fever, September 20th, 1889.

CLAIM No. 155. Jno. P. Steele, of Hinton Lodge, No. 236, was killed by Accidental Pistol Shot Wound, October 1st, 1889.

CLAIM No. 156. Chas. L. Spinks, of Kennesaw Lodge, No. 217, died from injuries received by falling from Locomotive, October 2d, 1889.

CLAIM No. 157. W. A. Ranson, of J. B. Maynard Lodge, No. 193, was killed in a Railroad Accident, October 8th, 1889.

CLAIM No. 158. Lewis Rame, of Union Lodge, No. 138, died of Tuberculosis, October 11, 1889.

CLAIM No. 159. Jno D. Lingold, of J. H. Selby Lodge, No. 243, died of Catarrhal Phthisis, October 12th, 1889.

CLAIM No. 160. J. C. Myers, of Anchor Lodge, No. 54, died of Peritonitis, October 13, 1889.

CLAIM No. 161. Anthony Kelly, of Jno. Hickey Lodge, No. 296, died from the effects of being Scalded, October 13th, 1889.

CLAIM No. 162. Chas. F. Flister, of Safety Lodge, No. 142, died of Cerebral Meningitis, October 14th, 1889.

CLAIM No. 163. Chas. H. Jones, of Signal Mount Lodge, No. 372, was killed by Railroad Accident, October 15, 1889.

CLAIM No. 164. R. J. Bible, of Signal Mount Lodge, No. 372, was killed in a Railroad Accident, October 15th, 1889.

CLAIM No. 165. Chas. Nolan, of Mt. Tacoma Lodge, No. 192, was killed by Railroad Accident, October 20th, 1889.

CLAIM No. 166. John Hadden, of Calhoun Lodge, No. 84, was killed by Explosion of Engine, October 22d, 1889.

CLAIM No. 167. Chas. E. Jones, of Boston Lodge, No. 57, was declared totally disabled by Loss of Eyesight, October 25th, 1889.

CLAIM No. 168. Chas. S. Makemson, of Enterprize Lodge, No. 75, died of Consumption, October 27th, 1889.

CLAIM No. 169. Clarence Dixon, of Empire Lodge, No. 212, died of Peritonitis, November 3d, 1889.

CLAIM No. 170. Dell Schriener, of Northwestern Lodge, No. 82, died from Scalds received from the bursting of a steam pipe, November 8th, 1889.

CLAIM No. 171. Samuel E. Affelter, of Lone Star Lodge, No. 70, died of Typhoid Fever, November 9th, 1889.

CLAIM No. 172. T. G. Emmons, of Friendly Hand Lodge, No. 201, was killed by Railroad Accident, November 10th, 1889.

CLAIM No. 173. Joseph H. Gregg, of Lone Star Lodge, No. 70, died of Chronic Dysentery November 11th, 1889.

An Assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and you are required to forward said amount for each member, whose name appears on the rolls December 1, 1889, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than December 20th, 1889. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Acknowledgments.

HUNTINGTON, W. VA., November 11, 1889.

To the Members of Ohio River Lodge, No. 294:

GENTLEMEN:—Please allow me to return my sincere thanks for the \$1,500.00 insurance due me on account of the sad death of my husband, Elma C. Stephenson, who was killed September 18, 1889. May the blessings of God rest on the noble brotherhood, now and forever is my wish. Many thanks to you all, especially to the Ohio River Lodge. May the good and noble Order live forever.

MRS. EMMA STEPHENSON.

CAMDEN, N. J., October 24, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to acknowledge the receipt of fifteen hundred (\$1,500.00), from the Receiver of Welcome Lodge, No. 72, James L. Gibbs, being the full amount due on the policy held by my dear brother, Howard Tyler. With many thanks I wish the brotherhood every possible success, and especially to Mr. James Gibbs, do I wish to return my thanks for the prompt manner in which the matter was settled.

Very respectfully,

MRS. C. W. STEELMAN.

MARION, S. C., October 28, 1889.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Please allow me to extend to you my sincere thanks for draft, \$1,500.00, that being the full amount due me on the policy of my late son, William M. Walling, who was killed in a collision near Patterson, Ga., on July 18th, 1889. I also wish to extend my sincere thanks to the members of Satilla Lodge, No. 325, for their tender care of and kindness in accompanying the remains to Marion S. C. I also extend my thanks to the Lodge for the beautiful life-size picture of my son. May the tender mercies of God ever attend you all, is the wish of a sorrowing mother. Yours sincerely,

MRS. FRANCES C. WALLING.

CONNELLSVILLE, PA., October 3, 1889.

To the Officers and Members of the B. of L. F.:

GENTLEMEN:—I have this day received a draft from Messrs. J. P. Smith and Louis Weihe, Master and Secretary of Youghiogheny Lodge, No. 302, B. of L. F., for the sum of fifteen hundred dollars (\$1,500.00), being the full amount due on the insurance policy held by my late husband, E. C. Pore, for which please accept my sincere thanks. I also wish to express my gratitude to the members of Youghiogheny Lodge for their brotherly attention to my husband, and their many kind acts to me in the time of my trouble. Accept my best wishes for the prosperity of your noble organization. May God bless you and may the brotherhood long continue a blessing to firemen and their families.

Gratefully and sincerely,

MRS. DIANNA PORE.

Unknown Addresses.

* FRANK ALEXANDER—Of Lodge No. 82, last heard from in City of Mexico, formerly employed on Minneapolis & St. Louis R. R. If he has relatives who see this or if anyone knows anything of him since May 30th, 1888, please notify W. E. Richmond, 820 N. Girard avenue, Minneapolis, Minn.

CHARLES FINEHART—When last heard from was at Denver and a member of the B. of L. F., although it is not known of what Lodge he was a member. Indirectly reported that he died of Small-Pox on some division of the A. & P. Santa Fe system about three years ago. Was born at Seymour, Ind., and was the son of J. Finehart, who was killed on the D. & R. G. at Denver in 1880. Anyone knowing anything concerning him, dead or alive, will please communicate with Stephen A. Finehart, Denver, Col.

REED'S HEAD LIGHT, FOR LOCOMOTIVE ENGINEERS AND MACHINISTS.

Comprising such information as necessary to give a General Knowledge of the Calculation and Construction of the American Locomotive Engine, and explanation of the Link and Slide Valve, and their working centers: Illustrating their movements with Working Valve Tables of the Link Motion, showing the effects produced in the distribution of steam, with different dimensions of Laps, Leads and travels of Valves. Practical mode of setting Valves and equalizing the cut off.

Practical Instructions to Manage the Locomotive
BY
WM. W. REED, Mechanical Engineer.

Price, \$1.50. Five Copies to one address, \$6.25.

For sale by the "Press" Printing and Publishing Co., Paterson, N. J.

\$325 CASH

will be distributed among the first 143 persons who return this advertisement showing by plain ink lines how to reach the center of the puzzle, entering at the edge and not crossing a black line. The first person showing the correct way to enter will receive \$50, the second person \$15, the third \$10, the next 15 persons \$5 each, the next 25 persons \$3 each, the next

100 persons \$1 each. If you do not get one of the largest amounts you have 142 chances for one of the others. This offer is made to introduce the CHIMNEY CORNER in new homes and competitors must send 30 cts. in payment for six months' subscription. It comprises 16 pages, 64 columns, is handsomely printed and elegantly illustrated. Further comment is unnecessary as everybody has heard of the Chimney Corner. No charge is made for your chance, as 50c. is the regular price charged for the paper. Four trials for \$1. Don't delay but write at once and win the big award. Contest closes January 5. Names and addresses of winners will appear in the Chimney Corner of January 15. For only 20 cts. you may get \$50. One cent stamps same as cash. Address THE CHIMNEY CORNER, 67 & 69 Dearborn St., Chicago.

LEGS AND ARMS WITH RUBBER FEET AND HANDS.

Fig. 1.

tent judgment commended the rubber foot and hand for their remarkable advantages.

Awarded the highest prizes at every competitive exhibition.

Endorsed and purchased by the U. S. Government.

A treatise of 400 pages with 200 illustrations and copyright formula, SENT FREE.

Fig. 1 is from an instantaneous photograph of a man ascending a ladder; he has two artificial legs substituting his natural ones, which were crushed by a railroad accident and amputated. Fig. 2 exposes his stumps. With his rubber feet he can ascend or descend a ladder, and balance himself on the rungs. He can walk and mingle with persons without betraying his loss. In fact, he is restored to his former self for all practical purposes.

With the old methods of complicated ankle-joints these results could not be so thoroughly attained.

Over 9990 in practical use, scattered in all parts of the world. Many of these have been supplied without presenting themselves to us, simply by sending measurements on a copyright formula which any one can easily fill out. Eminent surgeons and compe-

DEAFNESS

A NEW TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result of this discovery is that a simple remedy has been discovered which permanently cures the most aggravated cases of these distressing diseases by a few simple applications made (two weeks apart) by the patient at home. A pamphlet explaining this new treatment is sent free by A. H. DIXON & Son, 337 and 339 West King Street, Toronto, Canada.

Lodges of the B. of L. F. wishing

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London: England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the output has increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Special Announcement to R. R. Firemen!

The results of sales the past year by railroad boys acting as agents for

THE BEST *POLISH* IN THE WORLD.

BAKER'S

TRIPOLINE,

Having been so satisfactory, we will for the balance of this year, ending Jan. 15th, next

THE BROTHERHOOD MEDICAL CO.

of Chicago, Ill., "a Joint Stock Organization of Railroad Engineers," proprietors of

Dimmick's Kidney and Bladder Cure

Are placing with all retail druggists who desire, the above named invaluable and thoroughly tested remedy, on a guarantee of merits and success in all cases which are reasonably possible. In all difficulties of the circulatory system and urinary organs, proceeding from the non-performance of proper functions of LIVER and KIDNEYS, such as Pains in the Back, Cold Hands and Feet, Female Difficulties of delicate nature, Children that Soil their Beds, or adults who are obliged to leave their beds many times during the night, Early Stages of Rheumatism, Paralysis, or General Depression—excepting in habitual use of Intoxicants—Bright's Disease, Consumption, Softening of Brain, Stone in Bladder, that has passed the period of crushing. Any one so troubled should secure one package from their druggist and use before the incurable stage is reached.

The druggist of whom procured is authorized to guarantee the merits in all reliable cases, "except as above," refunding the money when the remedy fails, when taken as directed and heed is given to the habits of life recommended and described on the large bottle. Dose is small, consequently needs to be taken continuously, commencing with five drops, increasing each dose one drop three times a day, before meals, until some unpleasantness is felt, then take the dose which did not disturb, continuing one week, then try again to increase, and so on each week taking the maximum dose as determined by test.

Nothing better for old people in decline of life and receding circulation, or for those who are traveling or engaged in railroad employment, exposed to sudden changes of temperature tending to derange the circulation.

In every severe and sudden cold Dimmick's Kidney and Bladder Cure will be found reliable and beneficial, and should be taken at once in the largest dose without disturbing the head, stomach or bowels.

The Brotherhood Medical Company are ambitious to establish the fact, that parties may be engaged in manufacturing, selling or prescribing proprietary remedies, and so conduct and represent their calling as to compromise no principles of business or conscience. No misrepresentations made. We fail sooner than intentionally depart from truth and honor. We have abundance of reliable and original testimonials, which are true, that the use of Dimmick's Kidney and Bladder Cure has more than satisfied the expectations of many. Responsible contracts in writing made with all who order one dozen, the conditions of which are confidential and conduce clearly to promote their interests in trade with no possible chance of loss. Advertising matter sent "free of expense" to all who desire who have the remedy on sale. If any person son is too old or remote to call on druggist or at our office, and will advise us by mail, we will give the case special attention, and reach them personally or by correspondence. Formula given to any reliable and trusty person who takes the trouble to enquire, showing clearly that there is no harm in using to a child.

Price \$1.00 per package, two bottles in our cartoon. The small one is for convenience in using, especially for railroad men on their trips, saving the inconvenience of caring for a large bottle when on the road, at work, or traveling. Correspondence solicited and promptly noticed by

LEATHER JACKETS.

ENGINEERS, FIREMEN, SWITCHMEN AND OTHERS,

All over the country, have adopted our Flannel-lined LEATHER JACKETS as the most comfortable and serviceable working garments for winter wear.

Send breast measure and length of sleeve for measurement.

These jackets are made of oil-tanned skins, impervious to wind or water.

One leather jacket will outwear two overcoats. We are the largest manufacturers of this class of goods in the United States.

G. W. SIMMONS & Co., "Oak Hall," Boston, Mass.

THE BURLINGTON STRIKE:

A concise history, giving a vivid picture of it and its paralyzing effect. The official effort to obtain substitutes; characters of those obtained. Pictures of wrecks caused by incompetency. Why do men organize? Defiance of organized labor. Treatment of the employes by the Burlington officials, leading to the strike of 1888. Strike of 1862. Committee of 1873. Pay cut, and classification established 1876, action of committee on same. Strike of 1877; promises made. Committee of 1883, broken up by discharge of part of it. Contract of 1886; violation of it. Committee of 1888, Engineers and Firemen, and the strike to a finish. Investigation by the Illinois and Iowa R. R. Commissioners, of the men employed. The dynamite conspiracy, and the Pinkerton evidence that was made to convict. Closing with a vivid portrait of 47 year's life on a locomotive—memoir of C. H. Frisbie, one of the oldest engineers in the United States. Every laboring man should have it. Agents wanted.

TESTIMONY FOR ALVA'S BRAZILIAN SPECIFIC.

We, the undersigned, take pleasure in certifying that we have used the Herb Medicine known as "*Ramon Alva's Blood Purifier*" with wonderful success, and we have also known many others to have used it with a like result. Appreciating its value, we cheerfully recommend it to all Brothers and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its great merit.

H. H. GREENLEAF,	J. O. CASKEY,
M. E. EGAN,	JAMES THOMPSON,
C. H. STARR,	<i>Engin'n Acambaro, Mex.</i>
<i>City of Mexico, Div. 159, Mexico City.</i>	

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy. It radically and effectually dispels all impurities of the blood.

FRANCO M. GONGORA.

The above signature is that which he uses in all his business, officially and otherwise; and he is an old pupil of mine.

P. A. ARCHBISHOP OF MEXICO.

CELAYA, October 1st, 1889.

I know several people who have suffered greatly from the consequences of impure blood, and in a very short while have felt

much better by using the medicine which was sent here by Don Ramon Alva for that purpose. I recommend this remedy as one which produces the best results, and is the best of its kind.

PABLO VARELA.

CELAYA, June 4th, 1889.

Don Ramon Alva:

DEAR SIR—I have the satisfaction of informing you that the Specific of which you are the owner, has produced the most wonderful results for a friend of mine who has suffered from Herpetic Eruption; and I consider your Specific a regenerator without an equal. In the name of my friend, I thank you sincerely, and be sure I will recommend your valuable medicine, as I have again seen its results. Yours truly,

PRESBITERO PABLO JUAREZ.

CELAYA, October 1st, 1889.

I certify with all formality that from personal knowledge the medicine made by Don Ramon Alva, and known now as "*Alva's Brazilian Specific*," purifies the blood, and therefore cures radically the infirmities which arises from impure blood.

The above to be used at the convenience of those who are interested.

EUSEBIO GONZALEZ.

Retail Price, \$1.00 Per Bottle.

N. B.—Railroad Men ordering Six or More Bottles at a time will be supplied at Wholesale Prices.

The above applies merely to Railroad men.
